MassMutual Select Funds – Letter to Shareholders

To Our Shareholders

December 31, 2006

Frederick C. Castellani MassMutual continues to believe that most investors should consider an investment program that features a diversification strategy that suits their risk tolerance, financial goals and time horizon, and that keeps them exposed to the powerful forces of long-term growth potential that underpin our economy and, secondarily, other global economies.

A Look Back at 2006: Stocks' Stellar Year

2006 turned out to be a notable year for stocks worldwide. For the 12 months ended December 31, the Dow Jones Industrial AverageSM (the "Dow"), which measures blue-chip stock activity, returned 16.29%. The technology-laden Nasdaq Composite® Index ("Nasdaq") advanced 9.52% and the S&P 500® Index, a broad measure of U.S. large-cap stock performance, gained 15.78%. The Russell 2000® Index, a measure of small-cap equity results, advanced 18.36%. But the standout performer in the equity markets by a large margin was the MSCI® EAFE® Index, a benchmark for foreign stocks, which returned 26.34%.*

In the bond market, the Lehman Brothers® Aggregate Bond Index, which measures the U.S. investment-grade fixed-income markets, returned 4.33% for the 12-month period ended December 31.* Bond investors continued to struggle due to a Federal Reserve ("Fed") that remained in a tightening mode until August.

Taking a closer look at the year on a quarter-by-quarter basis, most U.S. stock indexes posted strong gains in the first quarter of 2006 – although foreign stocks outperformed their U.S.-based counterparts in a pattern that would continue throughout the year. In the fixed-income markets, the Lehman Brothers Aggregate Bond Index fell slightly. The second quarter saw a turnaround in the fortunes of equity markets worldwide, as investor uncertainty led many of the world's markets lower. Meanwhile, with rising inflation and interest rates, bond prices remained on the defensive.

Both the stock and bond markets saw good returns in the third quarter of 2006. Markets were buoyed by the Fed's decision to hold interest rates steady in both August and September, falling crude oil prices and favorable readings in some key inflation measures. Foreign stocks also fared well. In most cases, stocks outperformed bonds – although moderating inflation readings and expectations of a slowing economy were particularly helpful to the bond market.

Domestic stocks forged higher once again during the fourth quarter, reaching some notable milestones along the way. The Dow posted a series of new highs and briefly crossed the 12,500 barrier, advancing 6.71% for the quarter. The S&P 500 Index broke the 1,400 level and closed up 6.69%. Small caps also ended the year strongly, as evidenced by the Russell 2000 Index, which rose 8.90%. For its part, Nasdaq returned 6.95% for the fourth quarter. The U.S. dollar weakened slightly during the period, supporting the returns of foreign stocks and helping the MSCI EAFE Index to rise 10.35%. The factors that initially triggered the summer stock market rally continued to support stock prices during the final quarter of 2006 – namely, the Fed's extended pause with regard to interest rate increases and lower crude oil prices.

In the fixed-income market, bond prices changed little in the fourth quarter, due in part to low default rates and generally favorable corporate earnings. Against this backdrop, the Lehman Brothers Aggregate Bond Index returned 1.24%. The yield curve remained inverted, with the yields of shorter-term securities generally staying higher than those of longer-term issues.

^{*} Indexes are unmanaged, do not incur fees or expenses and cannot be purchased directly for investment.

MassMutual Select Funds – Letter to Shareholders (Continued)

It was a good year ... after all

At the end of 2005, experts pointed out that the equity market had advanced for three consecutive years, the Fed was raising interest rates and crude oil was on the rise. Not only that, but 2006 was the second year in the presidential cycle, a time that often heralds weak performance for stocks. For the first half of the year, the markets appeared ready to fulfill that prophecy, since most of the popular averages were sluggish from January through early May.

After the Fed's Open Market Committee rate hike on May 10, investors reacted with a sell-off, triggering a two-month market correction. It seemed that their patience with the Fed's credit-tightening had reached an end. In retrospect, however, the correction set the stage for the sustained rally that began in July and continued through the end of the year.

Why did the equity markets reverse course and head higher? During the summer, data emerged that suggested a mildly slowing, but still-expanding economy (i.e., a "soft landing") – which was seen as the best-case outcome after the cycle of Fed tightening. Inflation eased a bit over the remainder of the year, and those developments made it feasible for the central bank to keep short-term interest rates unchanged in August. Stable interest rates, in turn, fueled share prices. Falling energy prices also drove stocks higher during the second half of the year and helped to improve inflation readings. After trending higher for the first six months of 2006, crude oil declined rapidly in August and September, stabilizing around the \$60 per barrel level for the remainder of the year. Meanwhile, natural gas retreated by almost 50% during the year's second half.

Outlook

The U.S. economy's ability to remain relatively healthy in the face of rising interest rates and energy prices for much of 2006 serves as another reminder that our economy is a potent force. As we begin 2007, naturally some concerns remain. In particular, investors are waiting to see if the economy weakens further. Offsetting this worry somewhat is the likelihood that the Fed could reverse course and lower interest rates if the economy appeared to be seriously faltering. That said, MassMutual continues to believe that most investors should consider an investment program that features a diversification strategy that suits their risk tolerance, financial goals and time horizon, and that keeps them exposed – through a judicious mix of stock- and bond-focused investments – to the powerful forces of long-term growth potential that underpin our economy and, secondarily, other global economies.

MassMutual Select Strategic Bond Fund – Portfolio Manager Report

What is the investment objective of the MassMutual Select Strategic Bond Fund – and who is the Fund's sub-adviser?

This Fund seeks a superior total rate of return by investing in fixed-income instruments. The Fund normally invests at least 80% of its net assets in U.S. dollar-denominated, fixed-income securities and other debt instruments of domestic and foreign entities, including corporate bonds, securities issued or guaranteed by the U.S. government, its agencies or instrumentalities, mortgage-backed securities and money market instruments. The Fund's sub-advisers are Western Asset Management Company Limited (WAML) and Western Asset Management Company (Western Asset). WAML manages the non-U.S. dollar denominated investments of the Fund.

How did the Fund perform during the 12 months ended December 31, 2006?

The Fund's Class S shares returned 4.31%, in line with the 4.33% return of the Lehman Brothers® Aggregate Bond Index, an unmanaged index of fixed-rate investment-grade securities with at least one year to maturity, combining the Lehman Brothers U.S. Government/Credit Index and the Lehman Brothers Mortgage-Backed Securities Index.

What was the investment background during the period?

Interest rates rose across the yield curve in the first quarter. The yield curve is a graphical representation of bond yields with very short maturities to the longest available, with the curve indicating whether short-term rates are higher or lower than long-term rates. Driven by the Federal Reserve's ("Fed's") decision to raise its target funds rate from 4.25% to 4.75% and by news that suggested the economy was stronger than expected, short-term interest rates rose more than had been expected, and somewhat more than long-term rates, resulting in a flatter yield curve. Investment-grade credit spreads – or the differences in yields between comparable bonds – declined modestly, as the outlook for the economy improved. Tightening spreads often indicate decreasing yields and increasing prices for a specific group of bonds. Bond prices move in the opposite direction to interest rates (or yields); when yields rise, the prices of existing bonds fall, and vice versa.

During the second quarter, interest rates moved broadly higher across the yield curve, driven by a more-active-than-expected Fed, a stronger-than-expected economy, and a mild rise in inflation concerns. Short-term rates rose more than long-term rates, leaving the yield curve substantially flat. The Fed raised its target federal funds rate by 0.25% at each of its two meetings, exceeding the market's expectation that only one more tightening was likely to occur. The economy proved resilient, despite rising energy prices and a softer housing market, while headline inflation registered 3%–4% and core inflation drifted slightly higher. The bond markets saw favorable returns in the third quarter of 2006, largely due to news of the Fed's long-awaited decision to hold interest rates steady in both August and September, falling crude oil prices and favorable readings in some key inflation measures. In most cases, stocks outperformed bonds, although moderating inflation readings and expectations of a slowing economy were particularly beneficial for fixed-income securities. During the fourth quarter, bond prices barely changed, due in part to low default rates and generally favorable corporate earnings. The yield curve remained inverted, with the yields of shorter-term securities for the most part staying higher than those of longer-term issues.

What factors contributed to the Fund's performance?

During the first quarter, our decision to extend duration moderately as rates rose suffered, since rates continued to drift higher. Duration is a measure of a bond or bond portfolio's sensitivity to interest rates. The longer the duration, the greater the price impact to the bond or portfolio when interest rates rise or fall. A modest exposure to the short end of the yield curve also hampered the Fund's performance, since short-term rates rose more than had been expected. A moderately overweight exposure to BBB-rated corporate bonds contributed to returns as spreads narrowed, and an emphasis on BB-rated bonds benefited as spreads narrowed and their prices rose. The Fund's strategies produced mixed results in the second quarter. Overweight duration detracted somewhat from performance, as interest rates rose, and modest yield curve exposure suffered as the curve flattened. Underweight exposure to the corporate bond sector benefited from wider spreads, but an emphasis on lower-quality issues was penalized as those sectors underperformed. Treasury Inflation-Protected Securities ("TIPS") exposure contributed to the Fund's progress, thanks mainly to an outsized inflation

MassMutual Select Strategic Bond Fund – Portfolio Manager Report (Continued)

adjustment for the period and a rise in breakeven spreads (the difference between TIPS' return and the rate of inflation that is needed for TIPS to break even to nominal Treasuries).

Turning to the third quarter, the Fund's strategies produced mixed, but generally positive results; our overweight duration exposure contributed to performance as interest rates fell. Our underweight exposure to investment-grade bonds was a modest negative, as that sector outperformed, but an emphasis on lower-quality credits helped to offset those losses, since they tended to outperform. Our modest exposure to emerging market debt added to returns as spreads narrowed. In the fourth quarter, the Fund's strategies once again yielded mixed, but overall positive results. Overweight exposure to the mortgage-backed sector was a positive, as a result of tighter spreads and low volatility. Underweight exposure to investment-grade bonds was a modest detractor, as that sector outperformed, but an overweight to lower-quality credits added to returns.

What is your outlook?

We believe the economy may be growing at a modestly below-average pace, thanks largely to pronounced weakness in the housing sector – but we don't see signs of any major change in direction for at least the next several months. We think the Fed is likely to view this combination of forces in a favorable light, and leave policy unchanged for the foreseeable future. In line with the belief that interest rates are likely to continue to remain relatively flat, we will seek to follow a tactical duration posture.

Performance data quoted represents past performance; past performance is not predictive of future results. The investment return and principal value of shares of the Fund will fluctuate with market conditions so that shares of the Fund, when redeemed, may be worth more or less than their original cost. Current performance of the Fund may be lower or higher than the performance quoted. Performance data current to the most recent month end may be obtained by calling 1-888-309-3539.

Investors should note that the Fund is a professionally managed mutual fund, while the Lehman Brothers Aggregate Bond Index is unmanaged, does not incur expenses, and cannot be purchased directly by investors. Investors should read the Fund's prospectus with regard to the Fund's investment objective, risks and charges and expenses in conjunction with these financial statements. Employee retirement benefit plans that invest plan assets in the Separate Investment Accounts (SIAs) may be subject to certain charges as set forth in their respective Plan Documents. Total return figures would be lower for the periods presented if they reflected these charges. The performance tables and charts do not reflect the deduction of taxes that a shareholder would pay on the Fund distributions or the redemption of the Fund shares.

^{*} Class A (sales load deducted) returns include the 4.75% maximum sales charge and Class N (CDSC fees deducted) returns include the 1.00% maximum contingent deferred sales charge for the first 18 months shown.

MassMutual Select Strategic Balanced Fund – Portfolio Manager Report

What is the investment objective of the MassMutual Select Strategic Balanced Fund? This Fund seeks long-term capital growth, consistent with preservation of capital and balanced by current income. Three sub-advisers each manage a portion of the Fund's assets. ClearBridge Advisors, LLC (ClearBridge) manages the equity component and Western Asset Management Company Limited (WAML) and Western Asset Management Company (Western Asset) manage the fixed-income component. WAML manages the non-U.S. dollar denominated investments of the fixed-income component of the Fund.

How did the Fund perform during the 12 months ended December 31, 2006?

The Fund's Class S shares returned 11.97%, outpacing the 11.60% return of the Lipper Balanced Fund Index, an unmanaged, equally weighted index of the 30 largest mutual funds within the Lipper Balanced Category. The Fund's 11.97% advance also outperformed the 4.33% return of the Lehman Brothers® Aggregate Bond Index, an unmanaged index of fixed-rate investment-grade securities with at least one year to maturity, combining the Lehman Brothers U.S. Government/Credit Index and the Lehman Brothers Mortgage-Backed Securities Index, but trailed the 15.72% return of the Russell 3000® Index, which measures the performance of the 3,000 largest U.S. companies based on total market capitalization.

What was the investment background during the period?

During the first quarter, optimistic investor sentiment prevailed with respect to corporate profits and the possibility that the Federal Reserve ("Fed") would stop raising interest rates sooner rather than later. Interest rates rose across the yield curve. The yield curve is a graphical representation of bond yields with very short maturities to the longest available, with the curve indicating whether short-term rates are higher or lower than long-term rates. Short-term interest rates rose more than had been expected, and somewhat more than long-term rates, resulting in a flatter yield curve. During the second quarter, stocks advanced through the first week of May and then corrected over much of the remainder of the period. Interest rates moved broadly higher across the yield curve, driven by a more-active-than-expected Fed, a stronger-than-expected economy, and a mild rise in inflation concerns. Short-term interest rates rose more than their long-term counterparts, leaving the yield curve substantially flat.

Both the stock and bond markets saw good returns in the third quarter of 2006. Markets held up well on news of the Fed's long-awaited decision to hold interest rates steady in both August and September, falling crude oil prices and favorable readings in some key inflation measures. In most cases, stocks outperformed bonds, although moderating inflation readings and expectations of a slowing economy were particularly helpful to the bond market. Domestic stocks forged higher once again during the fourth quarter, reaching some notable milestones along the way. In the fixed-income market, bond prices barely changed, due in part to low default rates and generally favorable corporate earnings. The yield curve remained inverted, with the yields of shorter-term securities for the most part staying higher than those of longer-term issues.

What factors contributed to the Fund's performance with respect to its stock portfolio?

During the first quarter, the largest contributors to the Fund's performance came from its holdings in the industrials, information technology and financials sectors. Conversely, the Fund's investments in the telecommunications services sector were the only detractors from performance. In the second quarter, the largest contributors to the Fund's results were in the energy and consumer staples sectors. Our holdings in the information technology and financials sectors were the largest detractors from performance, however. For the full year, the financials and information technology sectors were substantial drivers of the Fund's performance relative to the Russell 3000 Index, whereas the telecommunication services and health care sectors were the most significant detractors.

What factors contributed to the Fund's performance with respect to its bond portfolio?

During the first quarter, the Fund's modest exposure to the short end of the yield curve hampered results, since short-term rates rose more than had been expected. A moderately overweight exposure to BBB-rated corporate bonds contributed to returns, as spreads – or the differences in yields between comparable bonds – narrowed. Tightening spreads often indicate decreasing yields and increasing prices for a specific group of bonds. Bond prices move in the opposite direction to interest rates (or

MassMutual Select Strategic Balanced Fund – Portfolio Manager Report (Continued)

yields); when yields rise, the prices of existing bonds fall – and vice versa. An emphasis on BB-rated bonds, particularly those of General Motors ("GM") and Ford, benefited the Fund as spreads narrowed and their prices rose. Turning to the second quarter, the Fund's underweight exposure to the corporate bond sector benefited from wider spreads, but our emphasis on lower-quality issues was penalized, as those sectors underperformed. Our overweight exposure to the mortgage-backed sector was a modest negative for performance, as spreads widened marginally.

Turning to the third quarter, the Fund's strategies produced mixed, but generally positive results; our overweight duration exposure contributed to performance as interest rates fell. Our underweight exposure to investment-grade bonds was a modest negative, as that sector outperformed, but an emphasis on lower-quality credits helped to offset those losses, since they tended to outperform. Our modest exposure to emerging market debt added to returns as spreads narrowed. In addition, our emphasis on high-yield auto sector debt was rewarded as spreads narrowed, in particular, on GM and Ford issues. In the fourth quarter, the Fund's strategies once again yielded mixed, but overall positive results. Overweight exposure to the mortgage-backed sector was a positive, as a result of tighter spreads and low volatility. Underweight exposure to investment-grade bonds was a modest detractor, as that sector outperformed, but an overweight to lower-quality credits added to returns.

What is your outlook?

From the portfolio's perspective with respect to stocks, the big story in the latter part of 2006 was the leadership shift from smaller companies to larger ones. Our view is that larger companies may be growing their earnings at an increasingly attractive rate versus their smaller counterparts. This could explain why we appear to be in the early stages of a leadership change favoring larger companies.

From the fixed-income standpoint, we believe the economy may be growing at a modestly below-average pace, thanks largely to pronounced weakness in the housing sector – but we don't see signs of any major change in direction for at least the next several months. We think the Fed is likely to view this combination of forces in a favorable light, and leave policy unchanged for the foreseeable future. In line with the belief that interest rates are likely to continue to remain relatively flat, we will seek to follow a tactical duration posture.

MassMutual Select Diversified Value Fund – Portfolio Manager Report

What is the investment objective of the MassMutual Select Diversified Value Fund – and who is the Fund's sub-adviser?

This Fund seeks to achieve long-term growth of capital and income by investing primarily in a diversified portfolio of equity securities of larger, well-established companies. The Fund's sub-adviser is AllianceBernstein L.P. (AllianceBernstein).

How did the Fund perform during the 12 months ended December 31, 2006?

The Fund's Class S shares returned 22.08%, moderately underperforming the 22.25% return of the Russell 1000® Value Index, an unmanaged index representative of stocks with a greater-than-average value orientation among the stocks of the largest 1000 U.S. companies based on capitalization.

What was the investment background during the period?

During the first quarter, domestic equity markets rose, as the S&P 500* Index increased by 4.2% on investor confidence that U.S. companies could continue to provide earnings gains in 2006. Investor optimism prevailed despite high oil prices, the prospects for further interest rate increases and a slowdown in the housing market. In this environment, value stocks outperformed growth stocks. After much turbulence, the S&P 500 Index ended the second quarter down 1.4%, reducing its gain for the first six months to 2.7%. While this was not a significant quarterly drop by historical standards, the mid-quarter rout came as a shock to investors after an extended period of strong markets and low volatility. In the decline, value stocks once again outperformed their growth counterparts.

U.S. stocks rallied in the third quarter, with the S&P 500 Index increasing 5.7%. Investor optimism increased on news of the Federal Reserve's decision to pause its two-year-plus monetary tightening campaign on evidence that inflation pressures are easing as U.S. economic growth gradually cools. After spiking in May and June, measures of market volatility returned to the unusually low levels of the past several years. The Russell 1000 Value Index continued to outperform both the broad market and its growth counterpart. However, in a reversal of a long-standing trend, large-caps beat smaller-cap stocks. Domestic equities extended their rally in the fourth quarter amid a supportive economic outlook, strong corporate earnings and booming merger and acquisition ("M&A") activity. The S&P 500 Index returned 6.7% for the quarter, to finish with a gain of 15.8% for the year.

What factors contributed to the Fund's performance?

During the first quarter, the Fund's returns, relative to its Russell 1000 Value Index benchmark were helped by its positioning within the energy and technology sectors. Conversely, relative returns were hurt by stock selection within the financials sector, as several insurance holdings declined on disappointing pricing. Finally, many auto parts holdings hampered performance, as pressure in that industry continued. Turning to the second quarter, stock selection within the energy sector hurt the Fund's relative returns. Stock selection within the consumer growth sector, particularly positions in Comcast and CBS, contributed to the Fund's results.

In the third quarter, the portfolio modestly outperformed its benchmark, as relative returns were helped by our stock selection within the financials sector. Shares of government-sponsored housing agencies Fannie Mae and Freddie Mac increased after the U.S. Justice Department ended its investigation of Fannie Mae's accounting principles without bringing criminal charges against the company. This alleviated investor concerns. On the other hand, the portfolio's relative returns fell victim to stock selection within the technology sector. Finally, in the fourth quarter, stock selection within the consumer cyclicals sector boosted the portfolio's relative returns — as DaimlerChrysler benefited from strong operating margins for its Mercedes division. Other contributors to relative performance were Merrill Lynch, which benefited from stronger-than-expected results in its fixed-income business, robust merger and acquisition activity and the brightening outlook for its international operations. Chief detractors from relative returns in the fourth quarter included Celestica, Office Depot and Crown Castle International.

MassMutual Select Diversified Value Fund – Portfolio Manager Report (Continued)

What is your outlook?

Within the U.S. equity market, valuation spreads between the most attractively priced and the most expensive stocks are unusually compressed, and the value opportunity remains below average. A central tenet underpinning the Fund's investment process is to keep portfolio risk proportional to the value opportunity; hence, tracking error versus the broad market and the Russell 1000 Value Index remains low. We continue to rely on our bottom-up fundamental research to uncover the attractive value opportunities that exist among individual stocks.

Performance data quoted represents past performance; past performance is not predictive of future results. The investment return and principal value of shares of the Fund will fluctuate with market conditions so that shares of the Fund, when redeemed, may be worth more or less than their original cost. Current performance of the Fund may be lower or higher than the performance quoted. Performance data current to the most recent month end may be obtained by calling 1-888-309-3539.

Investors should note that the Fund is a professionally managed mutual fund, while the Russell 1000 Value Index is unmanaged, does not incur expenses, and cannot be purchased directly by investors. Investors should read the Fund's prospectus with regard to the Fund's investment objective, risks and charges and expenses in conjunction with these financial statements. Employee retirement benefit plans that invest plan assets in the Separate Investment Accounts (SIAs) may be subject to certain charges as set forth in their respective Plan Documents. Total return figures would be lower for the periods presented if they reflected these charges. The performance tables and charts do not reflect the deduction of taxes that a shareholder would pay on the Fund distributions or the redemption of the Fund shares.

^{*} Class A (sales load deducted) returns include the 5.75% maximum sales charge and Class N (CDSC fees deducted) returns include the 1.00% maximum contingent deferred sales charge for the first 18 months shown.

MassMutual Select Fundamental Value Fund – Portfolio Manager Report

What is the investment objective of the MassMutual Select Fundamental Value Fund – and who is the Fund's sub-adviser?

The Fund seeks long-term total return by investing at least 80% of its net assets in equity securities, with a focus on companies with large capitalizations (generally having market capitalizations above \$2 billion). The Fund's sub-adviser is Wellington Management Company, LLP (Wellington Management).

How did the Fund perform during the 12 months ended December 31, 2006?

The Fund's Class S shares returned 21.06%, outpacing the 15.78% return of the S&P 500® Index, a widely recognized, unmanaged index representative of common stocks of larger capitalized U.S. companies.

What was the investment backdrop during the period?

During the first quarter, U.S. equity markets posted one of their strongest quarters in recent years in the face of rising long-term interest rates and noticeable cooling in the housing market. Value stocks outperformed the broader market, as the Russell 1000[®] Value Index return of 5.9% bested the S&P 500 Index return of 4.2%. Turning to the second quarter, domestic stock markets were weak, as investors became increasingly nervous about inflation and continued Federal Reserve ("Fed") tightening. Evidence suggesting some cooling in the U.S. housing market became more apparent during this period. In this environment, value stocks outpaced the broader market, as the Russell 1000 Value Index return of 0.6% outperformed the S&P 500 Index return of −1.4%.

Both the stock and bond markets saw good returns in the third quarter of 2006. Markets held up well on news of the Fed's decision to hold interest rates steady in both August and September, falling crude oil prices and favorable readings in some key inflation measures. Value outperformed growth and the broader market once again in the third quarter, as the Russell 1000 Value Index return of 6.2% beat the S&P 500 Index return of 5.7%. Foreign stocks also fared well. Domestic stocks forged higher again during the fourth quarter, reaching some notable milestones along the way. In the general pattern for 2006, value stocks outperformed growth and the broader market, but with less of a margin than earlier in the year, as the Russell 1000 Value Index increased 8%, while the S&P 500 returned 7%. The factors that initially triggered the summer stock market rally continued to support stock prices during the final quarter of 2006 – namely, the Fed's extended pause with regard to interest rate increases and lower crude oil prices.

What factors contributed to the Fund's performance?

During the first quarter, stock selection in three of 10 broad industry sectors added to the Fund's performance relative to its benchmark, the S&P 500 Index. Holdings in the energy, industrials and consumer staples sectors were the largest contributors. Conversely, the Fund's investments in the health care, utilities and materials sectors detracted from relative results. From an industry weightings standpoint, the Fund's allocations to capital goods, transportation and food/staples retailing contributed to the Fund's relative results. Turning to the second quarter, stock selection in six of 10 broad industry sectors fueled the portfolio's benchmark-relative performance. Investments in the financials, consumer staples and utilities sectors were the largest contributors to the Fund's progress. Conversely, holdings in the information technology, energy and health care sectors detracted the most from relative results. With respect to industry weightings, the portfolio's allocations to health care equipment/services, food/staples retailing and capital goods hampered the Fund relative to its benchmark.

Stock selection in six of the 10 broad sectors drove the portfolio's relative performance in the third quarter. Aggregate sector exposures detracted on the margin, particularly the above-benchmark allocation to industrials. Within technology, Motorola, Cisco, and Sun Microsystems each rose over 17% following strong earnings reports and optimistic outlooks. In financials, the Fund's position in Goldman Sachs returned more than 12%, while Ace Limited rose over 8%. Investment in Boston Scientific and an underweight position in Pfizer contributed to health care's emergence as the Fund's weakest sector in the third quarter. In energy, numerous holdings declined as commodity prices fell

MassMutual Select Fundamental Value Fund – Portfolio Manager Report (Continued)

from their peak. Finally, in the fourth quarter, stock selection in three of the 10 broad sectors boosted the Fund's relative performance. In aggregate, sector allocations detracted, particularly an overweight position in health care. Within health care, the Fund benefited from Boston Scientific, which rose 16%, and on a relative basis from a below-benchmark exposure to Pfizer. Within financials, Goldman Sachs, Ace, Citigroup, and Bank of New York all rose more than 10%. The Fund's energy holdings delivered strong absolute returns.

What is your outlook?

We believe we will experience a normal, but less robust global economy with some profit growth and steady price-to-earnings (P/E) multiples. While we feel that the odds for a recession are low, the slowdown in housing and lower employment growth have the potential to slow down the U.S. economy. Emerging markets trade surpluses, recycled petrodollars, and corporate cash flows are fueling the capital markets, which are ignoring for now the slowing economic trends. It appears that liquidity is plentiful from the money flowing into stocks, bonds, private equity and non-U.S. mutual funds. In our view, this cash flow makes it hard to be pessimistic about potential market returns.

MassMutual Select Value Equity Fund – Portfolio Manager Report

What is the investment objective of the MassMutual Select Value Equity Fund – and who is the Fund's sub-adviser?

The Fund seeks long-term growth of capital by investing in securities of companies that Fund management believes are undervalued in the marketplace relative to factors such as the company's assets, sales, earnings, growth potential, or cash flow, or in relation to securities of other companies in the same industry. The Fund's sub-adviser is Fidelity Management & Research Company (Fidelity).

How did the Fund perform during the 12 months ended December 31, 2006?

The Fund's Class S shares returned 13.40%, trailing the 22.25% return of the Russell 1000® Value Index, an unmanaged index representative of stocks with a greater-than-average value orientation among the stocks of the largest 1000 U.S. companies based on capitalization.

What was the investment background during the period?

The domestic equity market posted positive returns during the first quarter of 2006. Despite concerns about inflation, a slowdown in the housing market and higher short-term interest rates, strong corporate earnings and healthy economic growth fueled U.S. stocks. The impact from energy prices was mixed. While the price for natural gas declined during the period on lower demand, oil prices increased slightly, pushing gasoline prices higher. The Federal Reserve ("Fed") raised its target short-term interest rate from 4.25% to 4.75%. During the second quarter, U.S. equities pulled back amid investor concerns about monetary tightening and potential inflationary pressures. More-volatile information technology stocks fared the worst, while defensive market sectors, including utilities, held up relatively well. Less-liquid small- and mid-cap stocks – which had done well in 2006 through early May – underperformed large-cap stocks, while value stocks bested their growth counterparts.

U.S. equity markets performed strongly in the third quarter of 2006, with most major equity indexes achieving positive returns. The Fed paused in its campaign of raising short-term interest rates to combat inflationary pressures, holding rates steady at its two most recent meetings. Commodity prices fell, as worries about global political unrest waned and fears of supply disruptions subsided. Both oil and gold declined nearly 20% from their earlier trading highs. The housing market continued to weaken, with the supply of new homes for sale at its highest level since 1995. Domestic equity markets continued to show significant strength in the fourth quarter, with all major equity indexes achieving positive returns. The Fed continued to hold short-term interest rates steady, while emphasizing that inflation remained a concern. Commodity prices generally retreated amid a quiet hurricane season and expectations for a mild winter. The pace of existing home sales picked up in November relative to October, but remained down nearly 11% from the fourth quarter of 2005.

What factors contributed to the Fund's performance?

Negative security selection within the materials and health care sectors hurt the Fund's performance during the first quarter. Within materials, the Fund held an overweight position in chemical stocks, which suffered somewhat from concerns about the supply and demand fundamentals for ethylene. Within health care, the Fund's pharmaceutical holdings lagged, due in part to lower-than-expected earnings for the fourth quarter. Contributing to the Fund's performance, relative to the benchmark (the Russell 1000 Value Index) was strong security selection within the media industry – where the Fund held underweight positions in stocks with exposure to traditional media, such as radio and television, and an overweight position in stocks with exposure to emerging markets and outdoor advertising. During the second quarter, from a sector perspective, financials held back the Fund's relative return the most. Specifically, the Fund's positions narrowly trailed their segment of the benchmark, as certain insurance and bank stocks were negatively impacted by downward earnings estimate revisions. Conversely, the Fund's overexposure to and good stock choices in telecommunications services stocks were a plus, as their underlying business fundamentals showed signs of stability and negative investor sentiment toward the sector abated.

The telecommunications services, health care and information technology sectors were the best performers during the third quarter. Within telecommunications services, the large diversified services companies all outperformed the benchmark, due largely to strength in wireless and business wireline services, and continuing positive regulatory trends. In the health care sector, pharmaceutical

MassMutual Select Value Equity Fund – Portfolio Manager Report (Continued)

companies were the strongest performers. Within technology, Microsoft and Cisco Systems were the leaders. Energy and materials stocks, on the other hand, were the weakest performers over the quarter, as oilfield services stocks fell on fears that weaker North American natural gas drilling could mean downward earnings revisions across the industry. Within materials, steel stocks declined after a long period of outperformance – despite positive demand trends and continued strength in non-residential construction. In the final quarter of 2006, the financials, energy and information technology sectors were the best performers. Within financials, large investment banking firms posted positive returns. In the energy sector, oil companies led the charge. Within information technology, IBM was the largest contributor on strong third quarter earnings results. Health care and consumer staples stocks were the weakest performers over the quarter.

What is your outlook?

Operating earnings for the broad market appear to be slowing in the uncertain economic environment that currently exists. Energy prices and commodity prices have fallen from peak levels, and the Fed has paused in its campaign of raising interest rates in order to assess whether higher inflation is still a threat to the domestic economy. We believe that slowing earnings growth for the broad market may benefit the types of companies that we favor: those with more sustainable earnings growth rates and attractive valuations, as these companies tend to outperform when earnings growth in the broad market reverts to levels at or below historical averages.

MassMutual Select Large Cap Value Fund – Portfolio Manager Report

What is the investment objective of the MassMutual Select Large Cap Value Fund – and who is the Fund's sub-adviser? This Fund seeks both capital growth and income by investing in large-capitalization companies that the Fund's sub-adviser, Davis Selected Advisers, L.P. (Davis), believes foster the creation of long-term value, such as proven management, a durable franchise and business model, and sustainable competitive advantages.

How did the Fund perform during the 12 months ended December 31, 2006?

The Fund's Class S shares returned 14.71%, trailing the 15.78% return of the S&P 500* Index, a widely recognized, unmanaged index representative of common stocks of larger capitalized U.S. companies.

What was the investment backdrop during the period?

Most U.S. stock indexes posted strong gains in the first three months of 2006 – although foreign stocks outperformed their U.S.-based counterparts in a pattern that would continue throughout the year. The second quarter saw a turnaround in the fortunes of equity markets worldwide, as investor uncertainty led many of the world's markets lower.

Both the stock and bond markets saw good returns in the third quarter of 2006. Markets held up well on news of the Federal Reserve's ("Fed's") decision to hold interest rates steady in both August and September, falling crude oil prices and favorable readings in some key inflation measures. Foreign stocks also fared well. Domestic stocks forged higher once again during the fourth quarter, reaching some notable milestones along the way. The U.S. dollar weakened slightly during the period, supporting the returns of foreign stocks and helping the MSCI® EAFE® Index rise 10.35%. The factors that initially triggered the summer stock market rally continued to support stock prices during the final quarter of 2006 – namely, the Fed's extended pause with regard to interest rate increases and lower crude oil prices.

What factors contributed to the Fund's performance?

Consumer discretionary companies were the most important contributors to the Fund's performance over the 12-month period ended December 31, 2006. The Fund benefited from careful stock selection within this sector, as its consumer discretionary companies outperformed the Fund's benchmark, the S&P 500 Index. Diversified financial and consumer staples companies also made important contributions to performance. Two diversified financial companies, JPMorgan Chase and American Express, and one consumer staples company, Altria, were among the top contributors to performance. On the other hand, Hershey Foods (in the consumer staples sector) was among the top detractors from performance.

The Fund's largest investment in 2006 was in insurance companies. Although these companies made a positive contribution to performance, they underperformed the benchmark. Berkshire Hathaway and Loews were among the top performers. Progressive and Transatlantic Holdings were among the major detractors. The Fund's investments in telecommunication services and energy companies also contributed to the Fund's underperformance in 2006. Although telecommunication services companies were the strongest performers for the benchmark, the Fund's holdings within that sector did not perform as well. Similarly, while energy companies made positive contributions to the Fund's performance, they too underperformed the S&P 500 Index. One energy company in particular, however, ConocoPhillips, was among the top contributors to the Fund's absolute performance. Conversely, telecommunication services holding Sprint Nextel (purchased in March), and EOG Resources, an energy company, were among the top detractors from the Fund's performance for 2006.

The Fund had approximately 10% of its assets invested in foreign companies as of December 31, 2006. As a group, the foreign companies owned by the Fund outperformed the benchmark over the 12-month period.

MassMutual Select Large Cap Value Fund – Portfolio Manager Report (Continued)

Consistent with our low-turnover strategy, only two companies dropped out of the Fund's top 10 holdings – Progressive and Golden West Financial. Progressive remained among the Fund's top 20 holdings at year-end and Wachovia acquired Golden West Financial. Taking Progressive and Golden West Financial's places in the top 10 were ConocoPhillips and Comcast, both of which were already top 20 holdings.

What is your outlook?

Although it is impossible to predict with any certainty the direction that the equity markets will take throughout 2007, we do expect that numerous forces will continue to influence the direction that the market takes moving forward – such as oil prices, inflation, geopolitical unrest and Fed policy. We believe, however, that we have positioned the Fund to be ready to handle the wide array of market conditions that investors may face throughout the remainder of the year.

MassMutual Select Indexed Equity Fund – Portfolio Manager Report

What is the investment objective of the MassMutual Select Indexed Equity Fund – and who is the Fund's sub-adviser?

The Fund seeks to approximate as closely as practicable (before fees and expenses) the capitalization-weighted total rate of return of that portion of the U.S. market for publicly traded common stocks composed of largest capitalized companies. The Fund pursues this objective by investing at least 80% of its net assets in the equity securities of companies that make up the S&P 500® Index. The Fund's sub-adviser is Northern Trust Investments, N.A. (Northern).

How did the Fund perform during the 12 months ended December 31, 2006? The Fund's Class S shares returned 15.35%, moderately trailing the 15.78% return of the S&P 500 Index, a widely recognized, unmanaged index representative of common stocks of larger capitalized U.S. companies.

What was the investment backdrop during the period?

The Federal Reserve ("Fed") raised interest rates twice during the first quarter of 2006, bringing the federal funds rate to 4.75% as of March 31. Oil prices remained a concern for investors and cast a shadow over future growth in equity markets in both the U.S. and abroad. During this timeframe, crude oil prices in the U.S. ranged between \$60 and \$70 per barrel, within striking distance of the 2005 high of \$71.

Turning to the second quarter, the Fed maintained its tightening policy and increased interest rates by 0.25% at each Federal Open Market Committee ("FOMC") meeting in May and June. The June increase was the 17th consecutive one since June 2004, and brought the federal funds rate to 5.25% as of June 29. The continued rise in energy and commodity prices fueled investor concerns about inflationary pressure on the U.S. economy. The lack of substantial progress in talks with Iran regarding their nuclear program contributed substantially to rising oil prices; additionally, the escalation of the conflict with North Korea that culminated with the actual testing of long-range missiles injected nervousness into the markets.

During the third quarter, equity markets benefited from the 3.9% fall in oil prices as well as the continued decline in interest rates, as the 10-year U.S. Treasury yield slipped to about 4.6% by the end of the quarter. Broadly speaking, equity investors saw lower energy costs and interest rates as beneficial to consumers and businesses. The Fed, however, showed less optimism about economic prospects, which helped prompt its August decision to halt its tightening policy of the federal funds rate. This marked one of the most significant developments in the U.S. during the quarter.

Domestic stocks forged higher once again during the fourth quarter, and many of the major indexes even reached some notable milestones. The U.S. dollar weakened slightly during the period, which supported the returns of foreign stocks. The factors that initially triggered the summer stock market rally continued to support stock prices during the final quarter of 2006 – namely, the Fed's extended pause with regard to interest rate increases and lower crude oil prices. After reaching a high of \$77.03 per barrel during the third quarter of 2006, oil prices retreated to the low \$60s by the end of 2006.

What factors contributed to the Fund's performance?

During the first quarter of 2006, large-capitalization stocks underperformed both mid- and small-cap stocks. Value stocks outpaced growth issues during the period. Telecommunication services was the best-performing sector in the Index, and utilities was the worst-performing sector. Turning to the second quarter, large-cap stocks outperformed both mid- and small-cap issues. Value stocks once again outpaced their growth counterparts. During the quarter, utilities was the best-performing sector in the Index, and technology was the worst-performing sector.

During the third quarter, telecommunication services was the best-performing sector in the Index. Health care, financials and information technology also showed a solid result. With the decline in oil and gas prices, it was no surprise that energy was the worst-performing sector. In a reflection of the gradually slowing U.S. economy, materials was slightly negative.

MassMutual Select Indexed Equity Fund – Portfolio Manager Report (Continued)

All sectors of the Index posted positive results for the fourth quarter. Materials was the top performer, followed by the energy sector. Financials and information technology also posted healthy returns. Health care was the quarter's worst-performing sector.

What is your outlook?

Although it is impossible to predict with any precision the direction that the equity markets will take in 2007, we do expect that many of the same forces that have influenced the markets over the past several years will continue. These factors include oil prices, inflation, geopolitical unrest and Fed policy. We are confident, however, that the Fund is positioned to pursue returns consistent with those of the S&P 500 Index.

MassMutual Select Core Opportunities Fund – Portfolio Manager Report

What is the investment objective of the MassMutual Select Core Opportunities Fund – and who is the Fund's sub-adviser?

This Fund seeks long-term growth of capital by normally investing at least 80% of its net assets in equity securities and securities convertible into common stocks traded on U.S. exchanges and issued by large, established companies. The Fund's sub-adviser, Victory Capital Management Inc. (Victory), seeks to invest in both growth and value securities.

How did the Fund perform during the nine months ended December 31, 2006?

Since the Fund's inception on March 31, 2006, its Class S shares returned 7.90%, lagging the 10.65% return of the S&P 500* Index, a widely recognized, unmanaged index representative of common stocks of larger capitalized U.S. companies.

What was the investment background during the period?

The second quarter saw a turnaround in the fortunes of equity markets worldwide, as investor uncertainty led many of the world's markets lower. Meanwhile, with rising inflation and interest rates, bond prices remained on the defensive. Both the stock and bond markets saw good returns in the third quarter of 2006. Markets held up well on news of the Federal Reserve's ("Fed's") decision to hold interest rates steady in both August and September, falling crude oil prices and favorable readings in some key inflation measures. Foreign stocks also fared well.

Domestic stocks forged higher once again during the fourth quarter, reaching some notable milestones along the way. The U.S. dollar weakened slightly during the period, supporting the returns of foreign stocks and helping the MSCI* EAFE* Index to rise 10.35%. The factors that initially triggered the summer stock market rally continued to support stock prices during the final quarter of 2006 – namely, the Fed's extended pause with regard to interest rate increases and lower crude oil prices.

What factors contributed to the Fund's performance during the period?

Energy/utilities was the best-performing sector during the second quarter, as oil prices climbed from the high \$60s per barrel to the mid \$70s, and the utility industry showed its defensiveness during a difficult equity market. Consumer staples was the worst-performing sector within the portfolio, relative to the benchmark, the S&P 500 Index, for the second quarter. Technology was the worst-performing sector on an absolute basis during this time frame, primarily in the electronics and hardware/software industries.

In a definite turnaround, technology was the best-performing sector during the third quarter. Expectations/valuations had declined to the point where positive earnings announcements were met with a great deal of buying enthusiasm. Large-capitalization growth securities began to perform well, as companies with defensive characteristics and steady earnings growth came into favor, while cyclical earnings were called into question. Energy was the worst relative performing sector within the portfolio for the quarter, as oil prices fell from \$74 per barrel to \$63 per barrel. Our emphasis on the more volatile oil service companies also hurt performance, as the sell-off was more pronounced in these names than the more defensive integrated energy companies. Turning to the fourth quarter, the best-performing sector was energy/utilities, as the commodity price found support in the high \$50s per barrel level for oil, and earnings came in at or above expectations, driving stock prices higher. The portfolio's capital goods stocks also performed well during the fourth quarter.

What is your outlook?

The portfolio continues to emphasize higher-quality companies with a global footprint to offset domestic weakness. Economically sensitive sectors, such as technology and capital goods, remain a focus, and we have gradually increased holdings in areas leveraged to consumer spending to take advantage of the negativity surrounding residential housing. Fundamentals will likely remain weak for the housing market as inventory levels are brought down, but we believe that housing-related securities can trade up with a mere stabilization of fundamentals. Lastly, we are finding more opportunities in growth stocks, which have underperformed their value counterparts for the past seven years. As corporate profitability decelerates, we believe investors could be willing to pay a higher multiple for companies that have the potential to exhibit above-average earnings growth in 2007.

MassMutual Select Blue Chip Growth Fund - Portfolio Manager Report

What is the investment objective of the MassMutual Select Blue Chip Growth Fund – and who is the Fund's sub-adviser?

The Fund seeks growth of capital over the long term by normally investing at least 80% of its net assets in the common stocks of large and medium-sized blue chip growth companies. The Fund's subadviser is T. Rowe Price Associates, Inc. (T. Rowe Price).

How did the Fund perform during the 12 months ended December 31, 2006?

The Fund's Class S shares returned 8.74%, trailing the 15.78% return of the S&P 500[®] Index, a widely recognized, unmanaged index representative of common stocks of larger capitalized U.S. companies.

What was the investment backdrop during the period?

In the first quarter, most U.S. stock indexes posted strong gains, as solid growth in corporate profits and signs of an uptick in overall economic activity helped to boost share prices. The second quarter saw a turnaround in the fortunes of the equity markets (on the heels of a strong first quarter), as investor uncertainty – caused in part by global unrest and rising oil prices – led many of the markets lower. In fact, The Dow Jones Industrial AverageSM was the only domestic equity benchmark to post a return in positive territory, advancing 0.37% for the three months ended June 30, 2006.

Both the stock and bond markets saw good returns in the third quarter of 2006. Markets held up well on news of the Federal Reserve's ("Fed's") decision to hold interest rates steady in both August and September, falling crude oil prices and favorable readings in some key inflation measures. Foreign stocks also fared well. In most cases, stocks outperformed bonds – although moderating inflation readings and expectations of a slowing economy were particularly helpful to the bond market.

Domestic stocks forged higher once again during the fourth quarter, reaching some notable milestones along the way. The U.S. dollar weakened slightly during the period, supporting the returns of foreign stocks and helping the MSCI[®] EAFE[®] Index to rise 10.35%. The factors that initially triggered the summer stock market rally continued to support stock prices during the final quarter of 2006 – namely, the Fed's extended pause with regard to interest rate increases and lower crude oil prices.

What factors contributed to the Fund's performance?

Energy stocks produced the best returns in the market during the first six months of 2006, and the portfolio's overweight in the energy sector enhanced performance relative to the S&P 500 Index. Our emphasis on energy equipment and services stocks also proved favorable, as these companies continued to benefit from increased spending by energy producers on infrastructure, equipment and specialized services. Stock selection was most successful in the consumer discretionary sector. Another sector that contributed positively to relative results was the materials sector, as a healthy economy and soaring commodity prices boosted returns within the sector. Metals and mining companies were the best performers. On the downside, disappointing stock selection in the health care sector, which posted poor returns during the period, detracted from the Fund's relative performance. The weakest performers were health care providers and services companies, which declined on concerns about slowing enrollment growth and cost pressures related to Medicare. The portfolio's industrial and business services holdings also hindered relative performance during the period. The key issue in this sector was what the portfolio did not own – the Fund held underweight positions in several areas that performed well, including aerospace and defense and air freight and logistics. The consumer staples sector was another area of relative weakness.

In the second half of 2006, the industrials and business services sectors outperformed due to strong stock selection. Primary strength came from overweight positions in machinery companies Danaher and Joy Global, as well as defense firms General Dynamics and Rockwell Collins. Stock selection drove outperformance in the consumer discretionary sector, offsetting a slight underweight position. Gaming stocks were the major source of strength. Casino operators Wynn Resorts and MGM Mirage were up on investor hopes for growth in Macau. Slots maker International Game Technology rose on strong replacement sales. Telecommunication services made a positive relative contribution on stock selection. Non-U.S. companies America Movil (Mexico) and Rogers Communication (Canada) were

MassMutual Select Blue Chip Growth Fund – Portfolio Manager Report (Continued)

the most significant contributors. An overweight position in U.S. wireless tower operator American Tower Systems also produced benefits. Conversely, stock selection weighed on information technology sector performance, which was the greatest sector detractor. Semiconductors were weak all year, and portfolio holdings Marvell Technology Group and Maxim Integrated Products made a negative contribution. Yahoo! traded lower throughout the year, as Internet competitor Google continued to distinguish itself as the leader in search and advertising revenues, and as competition rose from new sites such as MySpace. Financials declined due to stock selection. Student loan company SLM Corp. was one of the greatest detractors, falling on concerns about anti-lender legislation in the new congress. Capital markets companies declined behind overweight positions in online brokers TD Ameritrade Holding and E*TRADE Financial. The stock price of investment manager Legg Mason also faltered. Consumer staples was a relative detractor due to our underweight position in that sector.

What is your outlook?

We believe that the market does not fully appreciate the strength in the U.S. and global economies and the resilience of corporate earnings and free cash flow growth. Companies producing stable earnings growth may be afforded higher prices. The outlook appears promising for the U.S. economy and the equities market. The portfolio will continue to seek companies with more diversified revenue streams and those with business leverage outside the United States.

MassMutual Select Large Cap Growth Fund – Portfolio Manager Report

What is the investment objective of the MassMutual Select Large Cap Growth Fund – and who is the Fund's sub-adviser?

The Fund seeks long-term capital appreciation by normally investing at least 80% of its net assets in the common stocks and securities convertible into common stocks of companies which the Fund's sub-adviser believes offer prospects for long-term growth and which, at the time of purchase, have market capitalizations of at least approximately \$10 billion. The Fund's sub-adviser is AllianceBernstein L.P. (AllianceBernstein).

How did the Fund perform during the 12 months ended December 31, 2006?

The Fund's Class S shares returned 0.36%, underperforming the 15.78% return of the S&P 500[®] Index, a widely recognized, unmanaged index representative of common stocks of larger capitalized U.S. companies.

What was the investment backdrop during the period?

The U.S. stock market's first quarter returns varied greatly by month. January's performance was robust, with the S&P 500 Index making a 2.7% single-month gain. February marked a significant pullback, while in March, the market regained steam, albeit below January's pace to end 4.2% ahead for the quarter. During this period, investors began incorporating increased inflation into their analyses. Such a perception bodes poorly for longer-term assets, such as growth stocks. In this environment, the growth style lagged value, preventing three quarters of growth outperformance from gaining further traction. For the second quarter of 2006, U.S. equity markets were down nearly across the board, as fears of the Federal Reserve ("Fed") increasing interest rates to combat inflation drove the yield on the 10-year Treasury up 0.30% to 5.14%. The market uncertainty that emerged in the first quarter accelerated in the second, and investors who had not experienced as much volatility in recent years saw more of it in day-to-day returns. Growth stocks in particular suffered more than their share of this volatility.

Both the stock and bond markets saw good returns in the third quarter. Markets held up well on news of the Fed's decision to hold interest rates steady in both August and September, falling crude oil prices and favorable readings in some key inflation measures. Foreign stocks also fared well. Domestic stocks forged higher once again during the fourth quarter. The factors that initially triggered the summer stock market rally continued to support stock prices during the final quarter of 2006 – namely, the Fed's extended pause with regard to interest rate increases and lower crude oil prices.

What factors contributed to the Fund's performance?

In the first quarter, stock-specific issues related to several of our information technology and health care holdings drove the Fund's underperformance. Ironically, the information technology sector was an overall contributor to relative performance. Although Yahoo! and Juniper were detractors, Broadcom, Corning and Qualcomm were the top-three-performing stocks for the first quarter. The volatility of growth stocks in the second quarter hampered Fund's performance, as the portfolio had been aggressively positioned (albeit prematurely) for a return to a growth cycle. The Fund's second quarter challenges were also related to stock-specific issues with several information technology and health care holdings, compounded by overall market concerns, including inflation worries. The information technology sector was the largest detractor from the Fund's performance relative to its benchmark, the S&P 500 Index. Conversely, the largest contribution to the Fund's relative returns in the second quarter came from our overweight stake in the energy sector, which was one of the top performers during the period.

The information technology sector was the largest detractor from performance in the third quarter. The energy sector was the second-largest drag on the Fund's results – and the Fund's overweight position in the sector magnified the problem. Despite this, sector allocation contributed slightly to the Fund's performance. For example, the Fund's underweight position in the industrials sector, which underperformed the benchmark, limited the negative impact of the sector. We also benefited from the portfolio's overweight position in the top-performing financials sector. Turning to the fourth quarter, the Fund fell victim to stock-specific issues related to several of our health care and information technology holdings. In particular, the health care sector was the largest detractor from performance.

MassMutual Select Large Cap Growth Fund - Portfolio Manager Report (Continued)

On the positive side, our top contributors were Google, Merrill Lynch, Apple and Goldman Sachs. Looking at performance in the aggregate by sector, the industrials and consumer discretionary sectors were the largest contributors to performance.

What is your outlook?

We don't expect upward earnings revisions to remain as plentiful as they have been, particularly if the U.S. economy continues to decelerate, which is the universal expectation. Without the economic boost that domestic stocks have been enjoying, fewer will be able to beat earnings expectations with regularity, and those that do should be increasingly prized. In our view, the Fund is well positioned to take advantage of a potential rebound in the growth investment style.

Performance data quoted represents past performance; past performance is not predictive of future results. The investment return and principal value of shares of the Fund will fluctuate with market conditions so that shares of the Fund, when redeemed, may be worth more or less than their original cost. Current performance of the Fund may be lower or higher than the performance quoted. Performance data current to the most recent month end may be obtained by calling 1-888-309-3539.

Investors should note that the Fund is a professionally managed mutual fund, while the S&P 500 Index is unmanaged, does not incur expenses, and cannot be purchased directly by investors. Investors should read the Fund's prospectus with regard to the Fund's investment objective, risks and charges and expenses in conjunction with these financial statements. Employee retirement benefit plans that invest plan assets in the Separate Investment Accounts (SIAs) may be subject to certain charges as set forth in their respective Plan Documents. Total return figures would be lower for the periods presented if they reflected these charges. The performance tables and charts do not reflect the deduction of taxes that a shareholder would pay on the Fund distributions or the redemption of the Fund shares.

MassMutual Select Growth Equity Fund – Portfolio Manager Report

What is the investment objective of the MassMutual Select Growth Equity Fund – and who is the Fund's sub-adviser?

This Fund seeks long-term growth of capital and future income by normally investing at least 80% of its net assets in the common stocks and securities convertible into common stocks of companies that the Fund's sub-adviser, Grantham, Mayo, Van Otterloo & Co. LLC (GMO), believes offer prospects for long-term growth.

How did the Fund perform during the 12 months ended December 31, 2006?

The Fund's Class S shares returned 2.00%, lagging the 15.78% return of the S&P 500[®] Index, a widely recognized, unmanaged index representative of common stocks of larger capitalized U.S. companies.

What was the investment background during the period?

Stocks picked up in the first quarter of 2006 exactly where they left off in late 2005, posting solid gains in the face of economic uncertainty and potentially setting the stage for a fourth consecutive year of equity gains since 2002. Solid growth in corporate profits and signs of an uptick in overall economic activity helped boost share prices during the first three months of the year. High-quality U.S. stocks again underperformed their low-quality counterparts, although the spread appeared to taper during the period. In a turnaround, the majority of the U.S. equity market indexes posted negative returns in the second quarter, with the exception of the Dow Jones Industrial AverageSM, which advanced 0.37%. Investor uncertainty caused in part by global unrest and rising oil prices led the markets lower. The spread between high- and low-quality stocks was considerable during the timeframe, although both ended the quarter in negative territory.

Both the stock and bond markets saw good returns in the third quarter of 2006. Markets held up well on news of the Federal Reserve's ("Fed's") decision to hold interest rates steady in both August and September, falling crude oil prices and favorable readings in some key inflation measures. Foreign stocks also fared well. Domestic stocks forged higher once again during the fourth quarter, reaching some notable milestones along the way. The factors that initially triggered the summer stock market rally continued to support stock prices during the final quarter of 2006 – namely, the Fed's extended pause with regard to interest rate increases and lower crude oil prices.

What factors contributed to the Fund's performance?

The Fund's overweight position (relative to its benchmark, the S&P 500 Index) in health care and its underweight position in the services sector hindered portfolio performance in the first quarter. Lower-than-benchmark positions in the food and beverage, machinery and manufacturing sectors contributed to relative returns, but not enough to offset overall negative sector performance. Stock selection was negative for the quarter, due in large part to picks among technology issues. Turning to the second quarter, the Fund's underweight positions in manufacturing and consumer goods, and its overweight position in health care hampered returns. The Fund's underweight position in technology and construction, and greater-than-benchmark allocations in the financial and oil and gas sectors contributed to relative returns. Stock selection was negative for the quarter, due in large part to picks among health care, financial, retail stores and technology issues.

In the third quarter of 2006, an underweight position in technology and an overweight position in oil and gas impeded portfolio performance. Overweight positions in financials and health care and an underweight position in metals and mining contributed to relative returns, but not enough to offset overall negative sector performance for the period. Finally, in the fourth quarter, sector selection detracted from relative returns, although overweight positions in the food and beverage and automotive sectors, in tandem with an underweight position in machinery, added to relative returns. These advances were offset, however, by the Fund's overweight positions in retail and transportation and its underweight position in services. Stock selection was also negative for the quarter. The Fund's investments in the oil and gas, utility and retail sectors added to relative returns, while its picks in the technology, health care and transportation sectors detracted.

MassMutual Select Growth Equity Fund – Portfolio Manager Report (Continued)

What is your outlook?

Market conditions were quite favorable as we moved into 2007. Historically low volatility, record-high profit margins (especially at the lower-quality end of the spectrum) and easy access to capital seemed to be positive factors for the market's benign environment. Historically speaking, each of these factors, however, has tended to be short-lived, and thus we are confident that the advantageous environment may soon end. While timing is always an undeterminable factor in such forecasts, we continue to seek investments that help us to reduce risk wherever possible.

MassMutual Select Aggressive Growth Fund – Portfolio Manager Report

What is the investment objective of the MassMutual Select Aggressive Growth Fund – and who are the Fund's sub-advisers?

This Fund seeks long-term capital appreciation by investing primarily in U.S. common stocks and other equity securities. The Fund's sub-advisers are Sands Capital Management, LLC (Sands Capital) and Delaware Management Company (Delaware). Each sub-adviser is responsible for a portion of the portfolio, but not necessarily equal weighted.

How did the Fund perform during the 12 months ended December 31, 2006? The Fund's Class S shares returned –5.86%, underperforming the 15.78% return of the S&P 500* Index, a widely recognized, unmanaged index representative of common stocks of larger capitalized U.S. companies.

What was the investment background during the period?

In the first quarter of 2006, most U.S. stock indexes posted strong gains, as solid growth in corporate profits and signs of an uptick in overall economic activity helped boost share prices. The second quarter saw a turnaround in the fortunes of the equity markets, as investor uncertainty – caused in part by global unrest and rising oil prices – led many of the markets lower. In fact, the Dow Jones Industrial AverageSM was the only broad domestic equity benchmark to post a return in positive territory, advancing 0.37%.

Domestic equity markets turned around in the three months ended September 30, 2006. Not long after the quarter began, stock indexes crept near their year-to-date low levels. In early August, however, the Federal Reserve ("Fed") elected not to raise the target level for federal funds, the first such decision in 17 consecutive Federal Open Market Committee ("FOMC") meetings. This move revived investor interest in equities. Stocks also gained strength from a pullback in commodity prices and the Fed's inactivity with regard to rate changes at its September FOMC meeting. Perhaps most notably, oil's price fell during the quarter, which helped to allay investor concerns that advancing oil prices might continue to pressure inflation. Stock markets around the world continued to run upward during the fourth quarter, capping a strong second half to the year. During the period, the strong pace of deal-making continued as mergers and acquisitions activity remained prevalent. In the bond markets, long-term yields continued to hover below yields on short-term Treasury securities. The yield on a 10-year Treasury note, a benchmark for mortgages, loans, and corporate bonds, ended 2006 at 4.708%. Generally speaking, the result was that many investors showed an increasing faith that the Fed would likely take no action with regard to interest rates in the near term.

What factors contributed to the Fund's performance during the period?

In the first quarter of 2006, from a sector perspective, several overweight positions in the consumer discretionary sector were the greatest detractors from the Fund's performance relative to its benchmark, the S&P 500 Index. Turning to the second quarter of 2006, the Fund's overweight position in the health care and consumer discretionary sectors relative to its benchmark detracted from performance. Also hampering the Fund's progress were underweight positions in the transportation and energy sectors. Conversely, underweight stakes in the technology and basic industry sectors, and an overweight position in telecommunications contributed to the Fund's relative performance in the second quarter.

During the third quarter, our financial services holdings delivered robust business results that either met or exceeded our expectations. The Fund's health care holdings also performed well in the third quarter. This is a positive change after experiencing weak results in the first two quarters of 2006. On the other hand, the Fund's holdings in the consumer discretionary sector turned in mixed results for the quarter, reflecting a combination of transient business issues and early signs of a potential economic slowdown. In the fourth quarter, the Fund's underweight positions in transportation and technology, along with overweight positions in consumer discretionary and financials, were the most significant positive drivers of the Fund's returns from a sector allocation perspective. However, an overweight allocation (versus the benchmark) in health care, and underweight positions in consumer staples, basic industry and miscellaneous detracted from relative performance as 2006 came to a close.

MassMutual Select Aggressive Growth Fund – Portfolio Manager Report (Continued)

What is your outlook?

We believe we have constructed a portfolio that is well positioned to capture the value created by a number of promising trends – including advances in radiation oncology, the shift to electronic futures trading, a secular supply/demand imbalance in energy and rapid innovation in the consumer electronics, computing and global telecommunications markets. If the underlying firms, on the whole, deliver high-quality business results that meet or exceed our growth expectations (which are, in most instances, higher than consensus estimates), we are confident that our portfolio has the potential to add value over the four- to five-year investment time horizon.

MassMutual Select OTC 100 Fund - Portfolio Manager Report

What is the investment objective of the MassMutual Select OTC 100 Fund – and who is the Fund's sub-adviser?

This Fund seeks to approximate, as closely as practicable (before fees and expenses), the total return of the 100 largest publicly traded over-the-counter common stocks. The Fund pursues this objective by investing at least 80% of its net assets in the equity securities of companies included in the NASDAQ 100 Index®, which is generally recognized as representative of the over-the-counter market. The Fund's sub-adviser is Northern Trust Investments, N.A. (Northern).

How did the Fund perform during the 12 months ended December 31, 2006?

The Fund's Class S shares returned 6.87%, outperforming the 6.79% return of the NASDAQ 100 Index. The NASDAQ 100 Index is a modified capitalization-weighted index composed of the 100 largest non-financial companies listed on the National Association of Securities Dealers Automated Quotations System ("NASDAQ").

What was the investment backdrop during the period?

The Federal Reserve (Fed) raised interest rates twice during the first quarter of 2006, bringing the federal funds rate to 4.75% as of March 31. Oil prices remained a concern for investors and cast a shadow over future growth in equity markets in both the U.S. and abroad. During this timeframe, crude oil prices in the U.S. ranged between \$60 and \$70 per barrel, within striking distance of the 2005 high of \$71.

Turning to the second quarter, the Fed maintained its tightening policy and increased interest rates by 0.25% at each Federal Open Market Committee ("FOMC") meeting in May and June. The June increase was the 17th consecutive one since June 2004, and brought the federal funds rate to 5.25% as of June 29. The continued rise in energy and commodity prices fueled investor concerns about inflationary pressure on the U.S. economy. The lack of substantial progress in talks with Iran regarding their nuclear program contributed substantially to rising oil prices; additionally, the escalation of the conflict with North Korea that culminated with the actual testing of long-range missiles injected nervousness into the markets.

During the third quarter, equity markets were helped by the 3.9% fall in oil prices as well as the continued decline in interest rates, as the 10-year U.S. Treasury yield slipped to about 4.6% by the end of the quarter. Broadly speaking, lower energy costs and interest rates were seen by equity investors as benefiting consumers and businesses. The Fed, however, showed less optimism about economic prospects, which helped prompt its August decision to finally halt its tightening policy of the federal funds rate. This marked one of the most significant developments in the U.S. during the quarter.

Domestic stocks forged higher once again during the fourth quarter, and many of the major indexes even reached some notable milestones. The U.S. dollar weakened slightly during the period, which supported the returns of foreign stocks. The factors that initially triggered the summer stock market rally continued to support stock prices during the final quarter of 2006 – namely, the Fed's extended pause with regard to interest rate increases and lower crude oil prices. After reaching a high of \$77.03 per barrel during the third quarter of 2006, oil prices retreated to the low \$60s by the end of 2006.

What factors contributed to the Fund's performance?

The NASDAQ 100 Index finished the first quarter of 2006 up 3.69%. The industrial sector advanced 16.84% for the quarter, while the information technology sector returned 2.67%. Consumer discretionary also made progress, with its return of 5.35%. The second quarter produced very different results for the NASDAQ 100 Index. It finished the period with a loss of 7.47%, following poor performance from the information technology sector, which lost 10.44%. The energy and health care sectors also lagged, with returns of -11.14% and -7.97%, respectively. On the upside, the materials sector advanced 10.75%.

Turning to the third quarter, the NASDAQ 100 Index returned 5.13%. The strongest performance and the Fund's main contribution came from the information technology sector, its largest sector position, which returned 8.42%. Conversely, the worst-performing sector was energy, which posted a return of -15.79%. The NASDAQ 100 Index finished the fourth quarter up 6.44%. The strongest performance for the period came from the telecommunication services sector, with its return of 17.31%. However, due to the Fund's small allocation to this sector, it was not a significant contributor to performance. The Fund's largest position, information technology, posted a return of 6.45%. Another notable contributor was the consumer discretionary sector, which returned 10.49%. The Fund's two

MassMutual Select OTC 100 Fund – Portfolio Manager Report (Continued)

fourth-quarter detractors were energy and consumer staples, although the Fund's small allocation to these sectors did not detract much from the Fund's performance.

What is your outlook?

Although it is impossible to predict with any precision the direction that the equity markets will take in 2007, we do expect that many of the same forces that have influenced the markets over the past several years will continue to do the same this year. These factors include oil prices, inflation, geopolitical unrest and Fed policy. We are confident, however, that the Fund is positioned to pursue returns consistent with those of the NASDAQ 100 Index.

Performance data quoted represents past performance; past performance is not predictive of future results. The investment return and principal value of shares of the Fund will fluctuate with market conditions so that shares of the Fund, when redeemed, may be worth more or less than their original cost. Current performance of the Fund may be lower or higher than the performance quoted. Performance data current to the most recent month end may be obtained by calling 1-888-309-3539.

Investors should note that the Fund is a professionally managed mutual fund, while the NASDAQ 100 Index is unmanaged, does not incur expenses, and cannot be purchased directly by investors. Investors should read the Fund's prospectus with regard to the Fund's investment objective, risks and charges and expenses in conjunction with these financial statements. Employee retirement benefit plans that invest plan assets in the Separate Investment Accounts (SIAs) may be subject to certain charges as set forth in their respective Plan Documents. Total return figures would be lower for the periods presented if they reflected these charges. The performance tables and charts do not reflect the deduction of taxes that a shareholder would pay on the Fund distributions or the redemption of the Fund shares.

MassMutual Select Focused Value Fund – Portfolio Manager Report

What is the investment objective of the MassMutual Select Focused Value Fund – and who are the Fund's sub-advisers?

This Fund seeks growth of capital over the long term by investing primarily in a non-diversified portfolio of U.S. equity securities. As a non-diversified fund, the Fund is not limited in the percentage of its assets that it may invest in any one company. (This means that the Fund may hold larger positions in a smaller number of stocks than a diversified fund. As a result, an increase or decrease in value of a single stock could have a greater impact on the Fund's net asset value and its total return.)

The Fund is managed by two sub-advisers, each being responsible for a portion of the portfolio, but not necessarily equal weighted. The sub-advisers are Harris Associates L.P. (Harris) and Cooke & Bieler, L.P. (Cooke & Bieler).

How did the Fund perform during the 12 months ended December 31, 2006? The Fund's Class S shares returned 20.28%, outpacing the 16.17% return of the Russell 2500 Index, a widely recognized, unmanaged index representative of common stocks of mid-capitalized U.S. companies.

What was the investment background during the period?

In the first quarter of 2006, most U.S. stock indexes posted strong gains, as solid growth in corporate profits and signs of an uptick in overall economic activity helped boost share prices. The second quarter saw a turnaround in the fortunes of the equity markets, as investor uncertainty (caused in part by global unrest and rising oil prices) led many of the markets lower. In fact, the Dow Jones Industrial AverageSM was the only broad domestic equity benchmark to post a return in positive territory, advancing 0.37%.

Both the stock and bond markets saw good returns in the third quarter of 2006. Markets held up well on news of the Federal Reserve's ("Fed's") decision to hold interest rates steady in both August and September, falling crude oil prices and favorable readings in some key inflation measures. Foreign stocks also fared well. Domestic stocks forged higher once again during the fourth quarter, reaching some notable milestones along the way. The U.S. dollar weakened slightly during the period, supporting the returns of foreign stocks and helping the MSCI® EAFE® Index to rise 10.35%. The factors that initially triggered the summer stock market rally continued to support stock prices during the final quarter of 2006 – namely, the Fed's extended pause with regard to interest rate increases and lower crude oil prices.

What factors contributed to the Fund's performance?

During the first quarter of 2006, the portfolio benefited most by lack of exposure to both energy and utility stocks, which both experienced weaker performance during the period. Conversely, consumer discretionary and industrials holdings dampened the Fund's performance. Turning to the second quarter, overall, the portfolio benefited most from its financials, consumer discretionary and health care stocks. Lack of exposure to both utilities and energy stocks diminished performance along with an overweight position in the technology sector.

In the third quarter, our lack of exposure to both utilities and telecommunications stocks hindered the Fund's performance. On the other hand, the portfolio benefited most from our consumer discretionary and health care holdings, in addition to a lack of exposure to energy stocks, which underperformed during the quarter. Stock selection, in fact, was the driver of the Fund's third quarter results. Our sector allocations were a modest drag on the Fund's results for the period, in spite of the fact that our underweight position in the energy sector switched from being a detractor to a contributor. An even bigger hindrance to the Fund's performance was the effect of our capitalization bias, which focuses on the lower end of the mid-cap spectrum. Turning to the fourth quarter, stock selection once again drove performance, as McDonald's, Cablevision Systems and Time Warner had the most significant influence on the Fund during the period. Yum! Brands and Hewlett-Packard also contributed to the Fund's momentum in the fourth quarter. Conversely, National Semiconductor and Intel detracted from the Fund's returns during the period.

MassMutual Select Focused Value Fund – Portfolio Manager Report (Continued)

What is your outlook?

We are particularly comforted by the financial and operating strength of the businesses we own in our portfolios, as well as the still-wide discount to intrinsic value these businesses now carry. We are also grateful that most investors continue to look to the lackluster U.S. equity market results of the past five years as indicative of future returns. This mix of factors, we believe, sets the stage for potentially favorable long-term returns.

MassMutual Select Mid-Cap Value Fund – Portfolio Manager Report

What is the investment objective of the MassMutual Select Mid-Cap Value Fund – and who is the Fund's sub-adviser?

This Fund seeks growth of capital over the long term by investing, under normal conditions, at least 80% of its net assets in the stocks of mid-cap companies. The Fund's sub-adviser is Cooke & Bieler, L.P. (Cooke & Bieler).

How did the Fund perform from its inception on August 29, 2006 through December 31, 2006?

The Fund's Class S shares returned 14.50%, outperforming the 10.75% return of Russell Midcap® Value Index, an unmanaged index that measures the performance of those companies in the Russell Midcap Index with lower price-to-book ratios and lower forecasted growth values. The Russell Midcap Index measures the performance of the 800 smallest companies in the Russell 1000® Index, a capitalization-weighted index of the 1,000 U.S. companies with the largest market capitalization.

What was the investment background during the period?

Both the stock and bond markets saw good returns in the third quarter of 2006. Markets held up well on news of the Federal Reserve's ("Fed's") decision to hold interest rates steady in both August and September, falling crude oil prices and favorable readings in some key inflation measures. Foreign stocks also fared well.

Domestic stocks forged higher once again during the fourth quarter, reaching some notable milestones along the way. The factors that initially triggered the summer stock market rally continued to support stock prices during the final quarter of 2006 – namely, the Fed's extended pause with regard to interest rate increases and lower crude oil prices.

What factors contributed to the Fund's performance?

In the third quarter, stock selection drove the Fund's favorable performance. The Fund's sector weightings overall were a modest drag on returns, despite the fact that the Fund's underweight position in the energy sector was no longer a detractor, but rather a contributor. An even bigger hindrance to the Fund was the effect of our capitalization bias. With the largest-capitalization quintile in the Russell Midcap Index outperforming the smallest-capitalization quintile by over 4.00%, and with the Fund's portfolio positions sharply in the opposite direction, there was a significant obstacle our stock selection had to overcome. Fortunately, the Fund's investments were up to the challenge – particularly Big Lots Corporation.

Big Lots has been a leader in the closeout retailing niche. The chain's low-income customer base felt the pinch of higher gas prices, which negatively impacted Big Lots' business and resulted in its stock declining. We leveraged the situation by buying more stock and making it the Fund's single largest holding. We felt comfortable with this strategy because of the quality characteristics of the franchise. Big Lots has some modest competitive advantages afforded by their market share dominance and economies of scale, and those advantages were undiminished. These advantages included a balance sheet with virtually no debt and free cash flow that was moving up even in the face of weak earnings. These advantages, in tandem with extreme undervaluation, were the reasons we were comfortable making Big Lots such a large position. The cash flow coming from Big Lots was so significant that it enabled them to announce the repurchase of 10% of their outstanding stock without using any debt to fund it, which investors took as positive news. Similar stories emerged about American Power Conversion, Entegris or Mettler Toledo. All were out-of-favor companies that displayed enough quality characteristics to justify their large positions in the portfolio. And all of them contributed significantly to the Fund's results.

In the fourth quarter, the overwhelming driver of the Fund's outperformance was stock selection. The Fund's sector weightings proved a modest detractor, led by a sharp underweight position in the top-performing utilities sector.

On the surface, the stocks that led our 2006 results seem to have little in common. Big Lots is a retailer, American Power Conversion manufactures computer-related equipment, and Mettler-Toledo makes weighing instruments (scales and balances). But one thing they do have in common is a

MassMutual Select Mid-Cap Value Fund – Portfolio Manager Report (Continued)

superior competitive advantage profile. Through better distribution networks, better name brands, better technology and scale advantages, these companies ended up with leading market share positions. We bought them cheaply when they faced temporary challenges and our purchase decisions were ultimately validated.

On the other end of the spectrum, several stocks disappointed in 2006. These included Superior Industries, a supplier of auto parts; Hubbell, a diversified manufacturer that ran into a channel inventory problem; and UnumProvident, a disability insurer in the midst of a financial turnaround. Fortunately, their position sizes tended to be smaller, so their impact was muted.

What is your outlook?

Our outlook for the economy and for the stock market remains somewhat cautious. Economic growth is unsteady, and the present cycle seems a bit extended to us. While it is possible that the Fed may be done raising interest rates in the near term, we are closely watching economic growth for signs of an extended slowdown.

Finally, valuations in the stock market did not appear reasonable to us at the end of 2006, so we are placing an emphasis on those stocks with compelling valuations. While this outlook is not unique, it does imply an emphasis on a somewhat cautious approach for the foreseeable future. In our view, the most attractive investments – and those which satisfy the Fund's need for safety – can be found in special situations.

MassMutual Select Small Cap Value Equity Fund – Portfolio Manager Report

What is the investment objective of the MassMutual Select Small Cap Value Equity Fund – and who is the Fund's sub-adviser?

This Fund seeks to maximize total return through investment primarily in small-capitalization equity securities. The Fund's sub-adviser is SSgA Funds Management, Inc. (SSgA).

How did the Fund perform during the nine months ended December 31, 2006?

Since the Fund's inception on March 31, 2006, its Class S shares returned 9.74%, outpacing the 9.13% return of the Russell 2000® Value Index, a widely recognized, unmanaged index that measures the performance of those Russell 2000 Index Companies with lower price-to-book ratios and lower forecasted growth rates.

What was the investment backdrop during the period?

The second quarter proved to be a challenging environment for investors. Increased volatility amid drastic return swings and concerns over the May meeting of the Federal Open Market Committee ("FOMC") influenced the market, which seemed to lack any clear direction. Stocks continued trending upward in April before reversing sharply in May. June finished up the quarter slightly positive. The S&P 500® Index finished with a 1.4% loss for the second quarter. Investors turned away from smaller stocks when monetary policy uncertainty drove volatility higher in May and June. Growth stocks trailed value issues.

The third quarter brought solid returns across global markets; the S&P 500 Index gained 5.7% for the period. The pause in U.S. rate hikes in August reinforced optimism that economic activity would achieve a soft landing, and a sharp September break in commodity prices eased inflation fears. Crude oil prices peaked during the summer on a range of supply concerns, but soon tumbled as rising inventories confronted a lack of severe weather. As investors narrowed their focus to large companies that could best withstand an economic slowdown and a potential rise in volatility, smaller stocks lagged behind large-cap issues. Global financial markets enjoyed a very strong fourth quarter. Equities showed little concern for the comments by the Federal Reserve regarding inflation risks, as steady takeover activity reflected buoyant liquidity conditions and kept sentiment positive. The Dow Jones Industrial AverageSM achieved a string of record highs, ending 2006 just below 12,500. Signs of recovery in some categories of large-cap stocks did little for the relative performance of growth-oriented stocks, as fresh strength in financial issues boosted value benchmarks.

What factors contributed to the Fund's performance?

Stock selection was positive in the second quarter and the main contributor to relative returns. The Fund's stock selection was most favorable in the electronic equipment and specialty retail industries. Conversely, Fund stock picks in the biotechnology and food/beverage industries hampered progress in the second quarter.

In the third quarter, the Fund's stock selection was less than favorable, although stock selections in computer hardware/business machines and the forest products/paper industries added to the bottom line. Conversely, stock selection in the computer software and food/beverage industries provided the greatest drag on the Fund's results. In the closing three months of the year, stock selection was the primary driver of the Fund's relative returns. In particular, the Fund's investments in the food/beverage, construction and real property industries were major sources of strength. Hampering the Fund's progress, on the other hand, were its holdings in computer hardware and business machines.

What is your outlook?

With the S&P 500 finishing a fourth year of solid positive returns, corporate profit margins running near historical highs and global financial conditions remaining warmly accommodative, it is easy to wonder if these positive influences can continue to bolster the markets through 2007. Equity valuations have begun to expand, but there is still potential for additional upside. Sentiment, while often tricky to measure, does not appear unduly exuberant. And volatility, although it seems to have plenty of room to rise, may remain under pressure as yield-hungry investors seek to profit from even the slightest market inefficiencies. Over 2007, we think equities may find it difficult to match the prosperity of 2006, but the positive trends of recent years seem unlikely to reverse quickly.

MassMutual Select Small Company Value Fund - Portfolio Manager Report

What is the investment objective of the MassMutual Select Small Company Value Fund – and who are the Fund's sub-advisers?

The Fund seeks to achieve long-term growth of capital by investing primarily in a diversified portfolio of equity securities of smaller companies. The Fund is managed by three sub-advisers, each being responsible for a portion of the portfolio, but not necessarily equal weighted. The Fund's sub-advisers include Clover Capital Management, Inc. (Clover), T. Rowe Price Associates, Inc. (T. Rowe Price) and EARNEST Partners, LLC (Earnest Partners).

How did the Fund perform during the 12 months ended December 31, 2006?

The Fund's Class S shares returned 14.97%, underperforming the 18.37% return of the Russell 2000[®] Index, a widely recognized, unmanaged index representative of common stocks of smaller capitalized U.S. companies.

What was the investment background during the period?

The U.S. stock market produced solid gains in the first three months of 2006. Despite the specter of rising short-term interest rates, stocks drew support from healthy corporate profit growth, better-than-expected economic data, and lively merger activity. Small-cap stocks led the market's advance, while mid-cap stocks outpaced large-cap names. Value and growth stocks were mixed during the quarter, but value shares generally outperformed. In an about-face, U.S. stocks fell in the second quarter, erasing much of the market's first quarter gains. Inflation concerns surfaced as record-high commodity prices filtered through to the retail level, producing surprisingly strong increases in the Consumer Price Index. Consequently, the Federal Reserve ("Fed") indicated that further interest rate increases were likely. The combination of higher inflation and rising interest rates put downward pressure on stocks. Small-cap stocks suffered the largest declines, while larger-company stocks held up the best. Value shares comfortably outpaced growth issues across all market capitalizations.

The U.S. equity market posted positive returns during the third quarter, as investors took an optimistic view of economic and geopolitical events. Leading the list were declining energy prices, a gradually improving Middle Eastern landscape and the eventual completion of a long series of interest rate increases from the Fed. Equity benchmark returns were unanimously positive. The fourth quarter was a very strong one for the market and for small stocks in particular. Investors looked past the potential threat of a more economically difficult 2007 and bid stocks higher, in some cases indiscriminately. During the period, value stocks outperformed growth stocks across all capitalizations.

What factors contributed to the Fund's performance?

During the first quarter, sector weightings drove much of the portfolio's outperformance, but stock selection – especially in the energy and health care sectors – also contributed to the Fund's bottom line. Performance was also fueled by stock selection in the financials and consumer discretionary sectors. Turning to the second quarter, stock selection in the consumer staples and utilities sectors boosted performance. In addition, merger and acquisition activity helped to drive the Fund's results. Three companies, Alderwoods Group, Aviall Inc., and NRG Energy, all received bids representing significant premiums relative to their prior prices. Favorable stock selection in the information technology sector and an overweight position in energy stocks also contributed positively to performance relative to the Russell 2000 Index, while poor stock picks among industrial and business services stocks detracted from relative results.

Stock selection in the energy sector was the Fund's most positive factor in the third quarter of 2006, as a focus on the exploration, production and refining industries aided performance. Selection in several sectors offset this strength, including information technology, where poor picks in the software industry impacted results. Merger activity aided results during the quarter, however, as three companies, Reckson Associates, Giant Industries and NS Group, received bids. Lower-quality companies continued to outperform higher quality ones, by almost any measure. Additionally, a relative overweight position in energy and a relative underweight position in financials (particularly REITs – real estate investment trusts) detracted from performance. REITs, in general, continued to outperform the broad market in the third quarter, despite softness in many real estate sectors and the

MassMutual Select Small Company Value Fund - Portfolio Manager Report (Continued)

fact that REIT valuations relative to the broad market were at record-high levels. The fourth quarter was one of mixed success. The portfolio participated in the strong market action and produced solid absolute returns driven by double-digit gains in the materials, consumer staples and energy sectors. A number of holdings across the portfolio performed well, such as Eaton Vance, a provider of mutual funds, and men's apparel manufacturer Phillips-Van Heusen. Only a few stocks, such as Covance, a contract research organization, posted negative returns in the final three months of 2006.

What is your outlook?

While we're generally positive on equities in 2007, we believe stocks will have to swim against the currents of a gradual slowdown in the economy in general and corporate profit growth in particular – plus contend with geopolitical instability. If profits were to slow, then investors may have to rely on multiple expansions to continue to see outsized gains in stocks. Some factors working in equities' favor as 2006 came to a close were stocks' attractiveness relative to bonds and the fact that interest rates were low – and seemingly unlikely to increase significantly in the near term.

Performance data quoted represents past performance; past performance is not predictive of future results. The investment return and principal value of shares of the Fund will fluctuate with market conditions so that shares of the Fund, when redeemed, may be worth more or less than their original cost. Current performance of the Fund may be lower or higher than the performance quoted. Performance data current to the most recent month end may be obtained by calling 1-888-309-3539.

Investors should note that the Fund is a professionally managed mutual fund, while the Russell 2000 Index is unmanaged, does not incur expenses, and cannot be purchased directly by investors. Investors should read the Fund's prospectus with regard to the Fund's investment objective, risks and charges and expenses in conjunction with these financial statements. Employee retirement benefit plans that invest plan assets in the Separate Investment Accounts (SIAs) may be subject to certain charges as set forth in their respective Plan Documents. Total return figures would be lower for the periods presented if they reflected these charges. The performance tables and charts do not reflect the deduction of taxes that a shareholder would pay on the Fund distributions or the redemption of the Fund shares.

MassMutual Select Small Cap Core Equity Fund – Portfolio Manager Report

What is the investment objective of the MassMutual Select Small Cap Core Equity Fund – and who is the Fund's sub-adviser?

This Fund seeks long-term growth of capital through investment primarily in small-capitalization equity securities. The Fund's sub-adviser is Goldman Sachs Asset Management, L.P. (GSAM).

How did the Fund perform during the nine months ended December 31, 2006?

Since the Fund's inception on March 31, 2006, its Class S shares returned 3.71%, trailing the 4.23% return of the Russell 2000* Index, a widely recognized, unmanaged index representative of common stocks of smaller capitalized U.S. companies.

What was the investment background during the period?

The second quarter saw a turnaround in the fortunes of the equity markets (on the heels of a strong first quarter), as investor uncertainty, caused in part by global unrest and rising oil prices, led many of the markets lower. In fact, the Dow Jones Industrial AverageSM was the only broad domestic equity benchmark to post a return in positive territory, with its 0.37% advance.

Both the stock and bond markets saw good returns in the third quarter of 2006. Markets held up well on news of the Federal Reserve's ("Fed's") decision to hold interest rates steady in both August and September, falling crude oil prices and favorable readings in some key inflation measures. Foreign stocks also fared well. In most cases, stocks outperformed bonds – although moderating inflation readings and expectations of a slowing economy were particularly helpful to the bond market. Domestic stocks forged higher once again during the fourth quarter, reaching some notable milestones along the way. The U.S. dollar weakened slightly during the period, supporting the returns of foreign stocks and helping the MSCI® EAFE® Index to rise 10.35%. The factors that initially triggered the summer stock market rally continued to support stock prices during the final quarter of 2006 – namely, the Fed's extended pause with regard to interest rate increases and lower crude oil prices.

What factors contributed to the Fund's performance?

Returns to our investment themes were positive overall in the second quarter of 2006. Valuation was the best-performing theme, as inexpensive companies outperformed their more richly valued industry counterparts. Other investment themes, including Profitability, Management Impact, Analyst Sentiment and Momentum also added value, albeit less significantly. Meanwhile, earnings quality was relatively flat for the quarter. Among sectors, stock selection was positive overall. The Fund's holdings in the consumer discretionary and information technology sectors helped performance. Conversely, holdings in the energy and materials sectors detracted the most from excess returns.

During the third quarter, returns to our investment themes were again positive overall. Earnings Quality and Valuation were the best-performing themes, as inexpensive companies with sustainable sources of earnings outperformed their more richly valued industry counterparts. Profitability also added value for the quarter. On the downside, Momentum was the biggest detractor from relative returns, followed by Management Impact and Analyst Sentiment. Among sectors, stock selection was positive overall for the period. The Fund's holdings in the consumer discretionary and materials sectors outpaced their peers in the benchmark the most. Conversely, stock picks in the financials and consumer staples sectors detracted the most from excess returns. In the fourth quarter, the results from our investment themes were mixed, but negative overall. Earnings Quality was the worst performer, as companies with sustainable sources of earnings underperformed their industry counterparts. Analyst Sentiment also detracted from results, but to a lesser extent. On the upside, Valuation was the biggest positive contributor to excess returns, while Profitability, Momentum and Management Impact also added value, albeit less significantly. Among sectors, stock selection was negative overall for the period. The Fund's holdings in the consumer discretionary sector lagged their peers in the benchmark the most, while stock picks in the health care sector outpaced their peers in the benchmark the most.

MassMutual Select Small Cap Core Equity Fund – Portfolio Manager Report (Continued)

What is your outlook?

Looking ahead, our view is that cheaper stocks may outpace more expensive ones and good momentum stocks have the potential to do better than poor momentum stocks. We also prefer companies about which fundamental research analysts are becoming more positive – and firms that are profitable, have sustainable earnings and use their capital to enhance shareholder value. As such, we anticipate remaining fully invested and expect that the value we add over time may be due to stock selection, rather than sector or size allocations.

MassMutual Select Mid Cap Growth Equity Fund – Portfolio Manager Report

What is the investment objective of the MassMutual Select Mid Cap Growth Equity Fund – and who is the Fund's sub-adviser?

This Fund seeks long-term capital growth by investing, under normal conditions, at least 80% of its net assets in stocks of companies with market capitalizations, at the time of purchase, that fall within the range of companies in either the S&P MidCap 400* Index or the Russell MidCap* Growth Index (as of January 31, 2006, between \$468 million and \$23.8 billion). The Fund's sub-adviser is Navellier & Associates, Inc. (Navellier).

How did the Fund perform during the 12 months ended December 31, 2006?

The Fund's Class S shares returned 5.97%, underperforming the 16.17% return of the Russell 2500 Index, a widely recognized, unmanaged index representative of common stocks of mid-capitalized U.S. companies.

What was the investment background during the period?

In the first quarter of 2006, most U.S. stock indexes posted strong gains, as solid growth in corporate profits and signs of an uptick in overall economic activity helped to boost share prices. The second quarter saw a turnaround in the fortunes of the equity markets, as investor uncertainty (caused in part by global unrest and rising oil prices) led many of the markets lower. In fact, the Dow Jones Industrial AverageSM was the only broad domestic equity benchmark to post a return in positive territory, advancing 0.37%.

Both the stock and bond markets saw good returns in the third quarter of 2006. Markets held up well on news of the Federal Reserve's ("Fed's") decision to hold interest rates steady in both August and September, falling crude oil prices and favorable readings in some key inflation measures. Foreign stocks also fared well. Domestic stocks forged higher once again during the fourth quarter, reaching some notable milestones along the way. The U.S. dollar weakened slightly during the period, supporting the returns of foreign stocks and helping the MSCI* EAFE* Index to rise 10.35%. The factors that initially triggered the summer stock market rally continued to support stock prices during the final quarter of 2006 – namely, the Fed's extended pause in interest rate increases and lower crude oil prices.

What factors contributed to the Fund's performance?

During the first quarter, the three sectors that contributed the most to portfolio performance were materials, energy and technology. Only two sectors detracted from the Fund's performance relative to the Fund's benchmark, the Russell 2500 Index – consumer discretionary and health care. In terms of portfolio structure at the end of the first quarter, the three sectors where the portfolio held the greatest overweight positions relative to the benchmark were technology, health care and materials. Conversely, the three sectors where the portfolio held its largest underweight positions were consumer discretionary, finance and consumer durables. During the second quarter, the Fund's holdings in the materials, consumer discretionary and durables sectors drove its overall performance. Conversely, the transportation, health care and finance sectors hampered the Fund's relative returns. As of June 30, 2006, the portfolio held its greatest overweight positions in the materials, technology and health care sectors. Conversely, the Fund's three largest underweight stakes were in the consumer discretionary, transportation and consumer staples sectors.

During the third quarter, the Fund's holdings in the technology and transportation sectors contributed the most to its relative performance, while the sectors that detracted the most from relative returns were consumer discretionary, durables and finance. Our stock selection modeling positioned the portfolio with an overweight allocation to the technology, utilities and finance sectors — with underweight positions in the consumer discretionary, consumer durables and materials sectors. Finally, despite the Fund's strong relative performance in December, it trailed the benchmark slightly for the fourth quarter due to unfavorable stock selection. Sectors that drove overall performance during the quarter included the Fund's holdings in finance, energy and materials. The consumer discretionary, staples and transportation sectors detracted the most from relative portfolio performance. With respect to sector weightings, at the close of 2006, the Fund held overweight allocations to the utilities, technology and materials sectors. Transportation, consumer discretionary and health care were the three sectors where the Fund held its greatest underweight positions.

MassMutual Select Mid Cap Growth Equity Fund - Portfolio Manager Report (Continued)

What is your outlook?

Overall, we remain optimistic that the Fund has the potential to begin 2007 strongly. Rising trading volume (due to new pension funding) and favorable fourth quarter earnings could benefit our holdings. In addition, corporate stock buybacks remain robust, price-to-earnings ratios remain extremely low and merger news and potential is widespread. Furthermore, companies and private equity firms continue to buy many companies due to the fact that many sectors of the market are undervalued. As a result, 2007 may be a favorable year for the portfolio.

MassMutual Select Mid Cap Growth Equity II Fund – Portfolio Manager Report

What is the investment objective of the MassMutual Select Mid Cap Growth Equity II Fund – and who is the Fund's sub-adviser?

This Fund seeks growth of capital over the long term by investing, under normal conditions, at least 80% of its net assets in a broadly diversified portfolio of common stocks of mid-cap companies whose earnings the Fund's sub-adviser, T. Rowe Price Associates, Inc. (T. Rowe Price), expects to grow at a faster rate than the average company. Mid-cap companies are defined as those whose market capitalizations, at the time of purchase, fall within the range of companies in either the S&P MidCap 400® Index or the Russell Midcap® Growth Index (as of January 31, 2006, between \$468 million and \$23.8 billion).

How did the Fund perform during the 12 months ended December 31, 2006? The Fund's Class S shares returned 7.55%, lagging the 10.31% return of the S&P MidCap 400 Index, a widely recognized, unmanaged index representative of common stocks of mid-capitalized U.S. companies.

What was the investment background during the period?

During the first six months of 2006, investors seemed to be taking notice of the risks to the market – moderation in economic growth, continued high commodity prices and global interest rate increases – all with a dramatic decline in risk premiums in recent years. As a result, the second quarter witnessed a change in investor psychology from risk-seeking to risk-averse. Traditional growth sectors like consumer discretionary, health care and information technology fared poorly in the second quarter and in the first half of the year. Cyclical and commodity-oriented stocks led the market in the first quarter and the early part of the second quarter. The continuation of Federal Reserve ("Fed") rate increases and the kindling of inflation fears then sent the U.S. equity market tumbling following the Federal Open Market Committee's May 10 meeting. However, the Fed's language from its June 29 meeting – suggesting a near end to its recent tightening campaign – led to a rally at the end of the quarter, with growth stocks participating.

Both the stock and bond markets saw good returns in the third quarter of 2006. Markets held up well on news of the Fed's decision to hold interest rates steady in both August and September, falling crude oil prices and favorable readings in some key inflation measures. Foreign stocks also fared well. Mid- and small-cap stocks lagged large caps during the quarter, and growth stocks underperformed value-oriented issues. Domestic stocks forged higher once again during the fourth quarter, reaching some notable milestones along the way. The factors that initially triggered the summer stock market rally continued to support stock prices during the final quarter of 2006 – namely, the Fed's extended pause with regard to interest rate increases and lower crude oil prices. In the fourth quarter, mid-cap stocks outperformed large caps – and growth stocks lagged value issues in all capitalization ranges.

What factors contributed to the Fund's performance?

Stock selection in the information technology ("IT") sector and in industrials and business services companies detracted the most from the Fund's performance relative to its benchmark, the S&P MidCap 400 Index, for the six months ended June 30, 2006. Conversely, our stock choices in the consumer discretionary and energy sectors contributed positively to relative returns during the same period. In the IT sector, weak stock selection in the electronic equipment and instruments industry, among computers and peripherals companies and in the Internet software and services industry, all weighed on relative performance. The consumer discretionary sector produced the largest boost to the Fund's relative performance in the period on the strength of stock selection in household durables and media.

Turning to the second half of the year, stock selection detracted from the Fund's relative performance in the third quarter. Specifically, our stock picks within the consumer discretionary and information technology sectors were a drag on the Fund, although those negative effects were offset somewhat by our relatively strong selections in the industrials and business services sector and in telecommunications services. In the fourth quarter, the Fund's sector allocation decisions were the primary drivers for its underperformance relative to the benchmark. Specifically, the Fund's underweight positions in the materials and consumer discretionary sectors were the most significant

MassMutual Select Mid Cap Growth Equity II Fund – Portfolio Manager Report (Continued)

detractors. Stock selection also contributed to relative underperformance, with our picks in the telecommunications and financials sectors detracting the most. Conversely, our stock selection in the consumer discretionary sector and the Fund's underweight position in the consumer staples sector helped boost relative returns.

What is your outlook?

Despite our cautious view of the economy, we remain optimistic. Valuations remain reasonable, and mid-cap stocks continue to offer attractive balance sheets, business models and growth prospects.

Performance data quoted represents past performance; past performance is not predictive of future results. The investment return and principal value of shares of the Fund will fluctuate with market conditions so that shares of the Fund, when redeemed, may be worth more or less than their original cost. Current performance of the Fund may be lower or higher than the performance quoted. Performance data current to the most recent month end may be obtained by calling 1-888-309-3539.

Investors should note that the Fund is a professionally managed mutual fund, while the S&P MidCap 400 Index is unmanaged, does not incur expenses, and cannot be purchased directly by investors. Investors should read the Fund's prospectus with regard to the Fund's investment objective, risks and charges and expenses in conjunction with these financial statements. Employee retirement benefit plans that invest plan assets in the Separate Investment Accounts (SIAs) may be subject to certain charges as set forth in their respective Plan Documents. Total return figures would be lower for the periods presented if they reflected these charges. The performance tables and charts do not reflect the deduction of taxes that a shareholder would pay on the Fund distributions or the redemption of the Fund shares.

MassMutual Select Small Cap Growth Equity Fund – Portfolio Manager Report

What is the investment objective of the MassMutual Select Small Cap Growth Equity Fund – and who are the Fund's sub-advisers?

This Fund seeks long-term capital appreciation by investing primarily in common stocks and equity securities of smaller companies that the Fund's sub-advisers believe offer potential for long-term growth. The Fund's sub-advisers are Wellington Management Company, LLP (Wellington) and Waddell & Reed Investment Management Company (Waddell & Reed). Each sub-adviser is responsible for a portion of the portfolio, but not necessarily equal weighted.

How did the Fund perform during the 12 months ended December 31, 2006?

The Fund's Class S shares returned 9.49%, trailing the 18.37% return of the Russell 2000® Index, a widely recognized, unmanaged index representative of common stocks of smaller capitalized U.S. companies.

What was the investment background during the period?

U.S. equity markets generally moved higher in the first quarter, supported by strength in corporate earnings, a solidifying global economy and benign inflation. Small caps outperformed their larger-cap peers for the quarter – all sectors within the Russell 2000 Index (also, the "benchmark") had positive returns. Turning to the second quarter, domestic equity markets moved lower, driven by inflationary fears, higher interest rates and concerns about a slowing economy. Small-cap stocks underperformed both mid and large caps. From a sector perspective, performance within the benchmark was tilted in favor of defensively oriented sectors. The energy, utilities and consumer staples sectors performed best, whereas information technology, health care and consumer discretionary lagged the benchmark.

Equity markets generally increased during the third quarter, as declining energy prices and a halt in interest rate hikes by the Federal Reserve ("Fed") offset a slowing housing market. Small-cap stocks outperformed mid caps and underperformed large caps, when measured using the Russell 2000, S&P 400® Mid Cap and S&P 500® Indexes. Domestic stocks forged higher once again during the fourth quarter, and many major indexes reached some notable milestones along the way. The factors that initially triggered the summer stock market rally continued to support stock prices during the final quarter of 2006 – namely, the Fed's extended pause with regard to interest rate increases and lower crude oil prices.

What factors contributed to the Fund's performance?

The vast majority of the Fund's underperformance in the first quarter came as a result of poor stock selection in the industrials sector. While heavy machinery and general industrial stocks in the benchmark were reaching new highs, the portfolio suffered from across-the-board underperformance in transportation-related stocks. On the upside, the financials sector excelled in the first quarter, due to underexposure (relative to the benchmark) to banks and thrifts and overexposure to investment managers and stock exchanges. Turning to the second quarter, stock selection in the information technology sector hurt relative performance during the period. Conversely, strong stock selection in the consumer discretionary, industrials and health care sectors contributed to the Fund's results.

During the third quarter, the portfolio experienced broad-based strength in the information technology sector. Strong stock selection across the transportation/airline, commercial services and capital goods industrial sub-sectors also provided the Fund with strength during the period. Conversely, stock selection in industrials hampered the Fund's performance, as several transportation holdings fell due to concerns regarding a weakening U.S. economy. Within energy, lower oil prices and concerns of slowing demand negatively impacted some of the portfolio's holdings and lower-than-benchmark exposure to the financials sector also detracted from performance. Finally, in the fourth quarter, the portfolio had solid results in telecommunication services and industrials, and there were a number of strong performers in the consumer discretionary sector. Positive stock selection in the materials and information technology sectors also benefited the portfolio as 2006 came to a close. On the other hand, health care holdings underperformed, and a few specialty pharmaceutical companies faced new potential competition for key drugs.

MassMutual Select Small Cap Growth Equity Fund – Portfolio Manager Report (Continued)

What is your outlook?

We are neither decidedly bullish nor bearish about the economy. We are, however, cautious about the prospects for growth in the first half of 2007 – which may force us to pare back our exposure to more economically sensitive sectors.

Although the market seems to teeter on every new macroeconomic data point, we expect the Fund's relative performance will be largely driven by stock selection as opposed to sector allocation. Consequently, we are focused on those companies that have unique business models, special market opportunities, and may deliver growth regardless of the economic cycle.

MassMutual Select Small Company Growth Fund – Portfolio Manager Report

What is the investment objective of the MassMutual Select Small Company Growth Fund – and who are the Fund's sub-advisers?

The Fund seeks long-term capital appreciation by investing primarily in common stocks and equity securities of smaller companies which the Fund's sub-advisers believe offer potential for long-term growth. The Fund is managed by two sub-advisers, each being responsible for a portion of the portfolio, but not necessarily equal weighted. The sub-advisers are Mazama Capital Management, Inc. (Mazama) and Eagle Asset Management, Inc. (Eagle).

How did the Fund perform during the 12 months ended December 31, 2006? The Fund's Class S shares returned 15.44%, trailing the 18.37% return of the Russell 2000* Index, a widely recognized, unmanaged index representative of common stocks of smaller capitalized U.S. companies.

What was the investment background during the period?

In the first quarter, the U.S. stock market posted positive investment results across all major market capitalization and style segments. Large-cap stocks lagged, but finally managed to recover. While midcap growth and value stocks performed in line with each other, small-cap growth stocks outperformed their value counterparts during the quarter. Meanwhile, the U.S. economy began its fifth year of expansion, as corporate profits proved more than adequate to shoulder the burden of higher oil prices. The Federal Reserve ("Fed") continued its fight against the threat of inflation by twice raising the federal funds target rate. Domestic equities corrected in the second quarter, with small-cap and growth stocks declining most. Concerns about energy and commodity prices, questions about the widespread practice of options backdating, and further increases in the federal funds rate prevailed in investors' minds over strong fundamental performance and a strong economy.

Domestic equity markets staged an impressive rally in the third quarter, as falling energy costs, the end of Fed tightening and a rally in the bond market offset continued fears of a housing-induced recession. Unfortunately, the small-cap growth market did not partake in the third quarter rally, as the Russell 2000 Growth Index declined slightly, while both the Russell 2000 Value and the S&P 500* Indexes advanced. The broad rally of the fourth quarter capped off a solid year for equity markets. In both the fourth quarter and full-year 2006, value outperformed growth and the smaller portion of the market capitalization range tended to outperform the larger portion. Finally, 2006 was the busiest year on record for mergers and acquisitions, as deal volume exceeded \$3.4 trillion for the year.

What factors contributed to the Fund's performance?

During the first quarter, every major sector finished with positive returns in both the portfolio and the Russell 2000 Index (the Fund's benchmark). Top-performing sectors were producer durables and materials/processing. The portfolio also benefited from takeovers of Datastream and Duratek. Conversely, worst-performing sectors relative to the benchmark were technology and energy – though the Fund had solid absolute returns in both. During the second quarter, the sectors that contributed the most to performance were industrials and energy. The Fund also had strong relative returns in information technology. The Fund's worst-performing sector in the second quarter was health care, where its investments in health care equipment and biotechnology lagged.

In the third quarter, the Fund's performance was driven in no small part by takeover activity in small-cap companies. The portfolio had four holdings that were taken over during the quarter: Delta & Pine, McDATA, NS Group and msystems. Strong security selection within the producer durables and consumer discretionary sectors also fueled portfolio performance during the period. With respect to the Fund's relative performance, the most successful sectors were information technology and industrials. On both an absolute and a relative basis, the top-performing sectors were health care and financials. Conversely, the worst-performing sectors in the third quarter were energy and health care. Takeover activity in the small-cap portion of the market, a trend that was very beneficial to the Fund earlier in the year, continued during the fourth quarter. Two of the Fund's holdings, Per-Se and Horizon Health, were acquired by other companies during the period. On the downside, the worst-performing sectors on a relative basis were information technology and consumer discretionary, though both provided positive absolute returns during the fourth quarter.

MassMutual Select Small Company Growth Fund – Portfolio Manager Report (Continued)

What is your outlook?

Economic growth has slowed, largely due to slowing housing and auto markets. In our view, a relatively benign interest rate environment and the expectation that the Fed may reduce interest rates by the spring have offset the slowdown in housing and autos. Money continues to flow into private equity in this low-interest-rate environment, providing additional catalysts for equity markets. We believe the recent strong stock market performance could continue into 2007, given the low returns offered by money markets, fixed-income and real estate investments as 2006 concluded.

MassMutual Select Emerging Growth Fund – Portfolio Manager Report

What is the investment objective of the MassMutual Select Emerging Growth Fund – and who are the Fund's sub-advisers?

This Fund seeks capital appreciation by investing primarily in smaller, rapidly growing emerging companies – generally in industry segments experiencing rapid growth, and often including technology and technology-related stocks. The Fund will normally invest at least 80% of its net assets in equity securities (primarily common stocks) of these emerging growth companies in both the U.S. and abroad. The Fund's sub-advisers are Delaware Management Company (Delaware) and Insight Capital Management, Inc. (Insight).

How did the Fund perform during the 12 months ended December 31, 2006?

The Fund's Class S shares returned 5.91%, trailing the 18.37% return of the Russell 2000® Index, a widely recognized, unmanaged index representative of common stocks of smaller capitalized U.S. companies.

What was the investment backdrop during the period?

The second quarter saw a turnaround in the fortunes of the equity markets, as investor uncertainty (caused in part by global unrest and rising oil prices) led many of the markets lower. In fact, the Dow Jones Industrial AverageSM ("the Dow") was the only domestic equity benchmark to post a return in positive territory, advancing 0.37%. The investor pessimism that had defined markets from late March of 2006 began to give way toward the end of the third quarter of the year, as commodity prices experienced a significant drop and the Federal Reserve ("Fed") finally paused its regimen of successive rate hikes that continued for more than two years. Large-cap stocks were the primary beneficiaries, posting mid-single-digit returns, and the Dow came within a whisper of an all-time high. At the lower end of the capitalization spectrum, however, investors were slower to forget the risk aversion that had contained them since March. As such, most small- and mid-cap indexes remained in check.

The rally in equities that began in August continued in the fourth quarter, as mounting evidence indicated that the threat of inflation had diminished and that interest rates and commodity prices would remain stable. Encouraged by the prospect of continued economic growth, investors drove stocks up across nearly the entire capitalization and style spectrums. Value outperformed growth universally. Large caps, which had been the early beneficiaries as investors shed their risk aversion in August, stepped aside in October for small caps, which rallied fiercely and led all market cap segments for the quarter. Among small-cap growth stocks, gains were widespread, with every sector of the Russell 2000® Growth Index posting returns in excess of 5%.

What factors contributed to the Fund's performance?

During the first quarter, the Fund benefited from favorable stock selection in the energy sector. Our underweight position in metals and mining firms hampered the Fund during the period, as these cyclical businesses – which excelled throughout 2005 – were still selling at very high valuation levels (relative to long-term averages) as 2006 began. Turning to the second quarter, our best-performing stocks included Lifecell, a manufacturer of artificial skin, and J2 Global, which provides Internet fax services to individuals and small offices. Conversely, a number of our worst performers during this period were in the technology sector.

In the third quarter of 2006, the Fund's financials, consumer discretionary and consumer services holdings were generally beneficial – while its investments in the industrials and energy sector impeded performance. Meanwhile, our information technology holdings produced mixed results. Sector weightings during this time were generally positive for the Fund, with an overweight position in consumer nondurables being the primary contributor. In the fourth quarter, the Fund's industrial holdings were generally beneficial, while consumer discretionary, consumer staples and financials holdings detracted. Information technology investments once again produced mixed results. Overall, stock selection was neutral. Positive contributions from the financial, consumer nondurables and business services sectors were negated by relative weakness in the technology and basic industry/capital goods sectors. A slightly negative contribution from overall sector allocations further hindered relative performance.

MassMutual Select Emerging Growth Fund – Portfolio Manager Report (Continued)

What is your outlook?

Looking into 2007, we believe the portfolio is well positioned to capitalize on continued economic growth. In the absence of a sudden, unexpected spike in inflation and energy prices, we expect consumer-related stocks to continue to do well. Additionally, major new product launches from some of the largest technology firms, coupled with the overdue need by much of corporate America to replace aging infrastructure, should bode well for the technology sector. In a slower growth environment, it is our expectation that companies possessing sustainable competitive advantages may be able to deliver growth in excess of the overall market – and we plan to maintain our focus on finding and retaining these market leaders across all market sectors.

MassMutual Select Diversified International Fund – Portfolio Manager Report

What is the investment objective of the MassMutual Select Diversified International Fund – and who is the Fund's sub-adviser?

This Fund seeks growth of capital over the long term by investing primarily in a diversified portfolio of equity securities of established companies selected from more than 40 industries and more than 40 developed and emerging market countries. The Fund normally invests in companies in at least three countries other than the United States. The Fund's sub-adviser is AllianceBernstein L.P. (AllianceBernstein).

How did the Fund perform from its inception on December 14, 2006 through December 31, 2006?

The Fund's Class S shares returned 0.70%, underperforming the 1.45% return of the Morgan Stanley Capital International All Country World Index (MSCI® ACWI®) ex U.S., an unmanaged index representative of stocks domiciled in global developed and emerging markets, excluding the United States.

What was the investment background during the period?

International equity markets extended their rally in the fourth quarter of 2006, amid a supportive economic outlook, robust corporate earnings and booming merger and acquisition ("M&A") activity. Dollar-based returns were amplified during the quarter by the appreciation of most major currencies against the U.S. dollar. The fourth quarter gains were broadly based across sectors. From a geographic standpoint, advances were broadly based across most regions. Emerging markets, which returned 32.2%, once again outperformed the developed world. Among the major developed markets, only Japan struggled to make headway, held back by mixed economic data and disappointing company earnings guidance.

What factors contributed to the Fund's performance?

During the fourth quarter, the Fund's relative returns were driven by strong stock selection among industrial commodity-, energy- and transportation-related stocks. Japanese companies JFE Holdings, Mitsui O.S.K. Lines and Japan Tobacco led portfolio returns during the period. Continued rumors of consolidation within the steel industry helped JFE Holdings. Furthermore, the stock moved higher on Asian steel prices, which remained fairly strong despite fears of overcapacity in the Asia-Pacific region. Japan Tobacco outperformed after the company confirmed its plans to purchase smaller UK-based rival Gallaher Group.

Conversely, detractors from portfolio returns in the fourth quarter were AstraZeneca, ING and Continental AG. International biosciences company AstraZeneca fell after its European patent was revoked for Nexium, a drug used to treat heartburn and acid reflux. Dutch insurer ING underperformed on weaker-than-expected third-quarter profits and disappointing guidance resulting from the challenging interest rate environment. Continental AG declined after the German automotive components manufacturer gave back some of its impressive gains from earlier in the year.

What is your outlook?

A central tenet of our strategy is to keep risks in the portfolio proportional to the value opportunity. Our large, fundamental research effort continues to search for the attractive value opportunities that exist among individual stocks.

GROWTH OF \$10,000 INVESTMENT SINCE INCEPTION

Performance data quoted represents past performance; past performance is not predictive of future results. The investment return and principal value of shares of the Fund will fluctuate with market conditions so that shares of the Fund, when redeemed, may be worth more or less than their original cost. Current performance of the Fund may be lower or higher than the performance quoted. Performance data current to the most recent month end may be obtained by calling 1-888-309-3539.

Investors should note that the Fund is a professionally managed mutual fund, while the MSCI ACWI ex US is unmanaged, does not incur expenses, and cannot be purchased directly by investors. Investors should read the Fund's prospectus with regard to the Fund's investment objective, risks and charges and expenses in conjunction with these financial statements. Employee retirement benefit plans that invest plan assets in the Separate Investment Accounts (SIAs) may be subject to certain charges as set forth in their respective Plan Documents. Total return figures would be lower for the periods presented if they reflected these charges. The performance tables and charts do not reflect the deduction of taxes that a shareholder would pay on the Fund distributions or the redemption of the Fund shares.

^{*} Class A (sales load deducted) returns include the 5.75% maximum sales charge and Class N (CDSC fees deducted) returns include the 1.00% maximum contingent deferred sales charge.

MassMutual Select Overseas Fund – Portfolio Manager Report

What is the investment objective of the MassMutual Select Overseas Fund – and who are the Fund's sub-advisers?

The Fund seeks growth of capital over the long term by investing in both foreign and domestic equity securities. The Fund invests at least 80% of its net assets in stocks of foreign companies, including companies located in Europe, Latin America and Asia. The Fund's two sub-advisers, Massachusetts Financial Services Company (MFS) and Harris Associates L.P. (Harris), are each responsible for a portion of the portfolio, but not necessarily equal weighted.

How did the Fund perform during the 12 months ended December 31, 2006?

The Fund's Class S shares returned 27.77%, ahead of the 26.34% return of the Morgan Stanley Capital International Europe, Australasia, Far East (MSCI® EAFE®) Index, a widely recognized, unmanaged index representative of foreign securities in the major non-U.S. markets of Europe, Australia and the Far East.

What was the investment background during the period?

In the first quarter of 2006, most U.S. stock indexes posted strong gains, as solid growth in corporate profits and signs of an uptick in overall economic activity helped to boost share prices. Against this backdrop, foreign stocks continued to outperform their U.S.-based counterparts. The second quarter saw a turnaround in the fortunes of the equity markets, as investor uncertainty (caused in part by global unrest and rising oil prices) led many of the markets lower. In fact, the Dow Jones Industrial AverageSM was the only broad domestic equity benchmark to post a return in positive territory, advancing 0.37%. Even the first quarter's clear winner, foreign stocks, only managed to eke out a 0.70% gain, as measured by the MSCI EAFE Index – aided in part by a weaker U.S. dollar.

Both the stock and bond markets saw good returns in the third quarter of 2006. Markets held up well on news of the Federal Reserve's ("Fed's") decision to hold interest rates steady in both August and September, falling crude oil prices and favorable readings in some key inflation measures. Foreign stocks also fared well. Domestic stocks forged higher once again during the fourth quarter, reaching some notable milestones along the way. The U.S. dollar weakened slightly during the period, supporting the returns of foreign stocks and helping the MSCI EAFE Index to rise 10.35%. The factors that initially triggered the summer stock market rally continued to support stock prices during the final quarter of 2006 – namely, the Fed's extended pause with regard to interest rate increases and lower crude oil prices.

What factors contributed to the Fund's performance?

The Fund's stock selection was strong in the first quarter of 2006. From a regional perspective, the greatest contributors to relative performance were the Fund's positions in Germany and the Netherlands, coupled with an overweight allocation in South Korea. The greatest detractor from performance was the Fund's overweight allocation to Taiwan relative to its benchmark, the MSCI EAFE Index. From a sector standpoint, stock selection in the utilities, communications, industrial goods and services, energy and transportation sectors all fueled the Fund's first quarter progress. Conversely, hampering the portfolio's performance were stock choices in the autos, housing, technology and consumer staples sectors. Turning to the second quarter, regionally speaking, the portfolio's underweight position in Japan was the largest contributor to performance. The Fund also benefited from its positions in the UK and the relative overweight allocations to Taiwan and South Korea. The greatest detractors from relative performance were the portfolio's positions in Germany. On a sector basis, stock selection in the health care, technology, consumer staples and leisure sectors all boosted the Fund's returns – as did overweight positions in the health care and consumer staples sectors. Conversely, stock selection in the basic materials, utilities and communications sectors hampered the Fund during the second quarter.

In the third quarter, stock selection in financial services, technology, retailing and consumer staples drove Fund performance. The portfolio's overweight position in the consumer staples sector also contributed. On the other hand, stock selection in the health care, industrial goods and services, and transportation sectors hampered the Fund's results, as did an underweight position in utilities and communications. From a geographic perspective, though the Fund had an underweight allocation to Japan, its Japanese positions advanced in the quarter and as a result, Japan was the largest contributor to relative performance. Other significant drivers of relative performance for the period were the Fund's positions in Germany and an overweight allocation to Switzerland. The greatest detractors from relative

MassMutual Select Overseas Fund - Portfolio Manager Report (Continued)

performance were an underweight allocation to Spain and portfolio positions in the UK. Finally, in the fourth quarter, stock selection in the retailing, energy, utilities, communications and health care sectors contributed to the Fund's progress. On the downside, our stock picks in industrial goods and services, consumer staples, basic materials and financial services detracted from the Fund's performance. The Fund's overweight position in health care also hindered its results in the fourth quarter, as did its underweight allocations to the utilities and communications sectors. From a regional standpoint, the Fund's underweight position in Japan once again boosted performance. Other large contributors to relative performance for the quarter were the Fund's allocations to Switzerland and France. Conversely, the greatest detractor from relative performance during the quarter was the Fund's position in the UK.

What is your outlook?

Looking forward, we are cautiously optimistic. Equity market valuation levels appear reasonable, but investors' risk appetite is high. After strong relative performance, many stocks with small capitalizations, or those domiciled in emerging markets – or that operate in more cyclical areas of the economy – have been trading at high valuations, given their history. Taking into consideration peak company profit margins and recent increases in global interest rates, the risk to profit estimates would seem to be rising, particularly in these areas. All of these factors indicate that it is getting harder to find solid value in the small-cap arena. Nonetheless, we have been having a fair amount of success with larger-cap securities and expect to continue to seek compelling values in that market.

What are the investment objectives of the Funds that comprise the MassMutual Select Destination Retirement Series?

- Destination Retirement Income Fund: This Fund seeks to achieve high current income and, as
 a secondary objective, capital appreciation, by investing in a combination of MassMutual equity,
 fixed-income and money market funds using an asset allocation strategy designed for investors
 already in retirement.
- Destination Retirement 2010 / 2020 / 2030 / 2040 Funds: Each of these Funds seeks to achieve
 as high a total rate of return on an annual basis as is considered consistent with prudent investment
 risk and the preservation of capital by investing in a combination of MassMutual equity,
 fixed-income and money market funds. Each Fund uses an asset allocation strategy designed for
 investors expecting to retire around the year 2010, 2020, 2030, or 2040, respectively.

How did the Funds perform during the 12 months ended December 31, 2006? For the 12 months ended December 31, 2006, each Fund's return is shown below. Also shown are the returns of each Fund's custom benchmark; the Lipper Balanced Fund Index, an unmanaged equally weighted index of the 30 largest mutual funds within the Lipper Balanced Category; the Lehman Brothers® Aggregate Bond Index, an unmanaged index of fixed-rate investment-grade securities with at least one year to maturity combining the Lehman Brothers Government/Credit Index and the Lehman Brothers Mortgage-Backed Securities Index; and the S&P 500® Index, a widely recognized, unmanaged index representative of common stocks of larger capitalized U.S. companies.

Destination Retirement Income Fund 5.47%	Custom Benchmark 7.71%	Lipper Balanced Fund Index 11.60%	Lehman Brothers Aggregate Bond Index 4.33%	S&P 500 Index 15.78%
Destination Retirement 2010 Fund 6.90%	9.30%	11.60%	4.33%	15.78%
Destination Retirement 2020 Fund 8.12%	11.68%	11.60%	4.33%	15.78%
Destination Retirement 2030 Fund 10.17%	14.80%	11.60%	4.33%	15.78%
Destination Retirement 2040 Fund 11.63%	16.94%	11.60%	4.33%	15.78%

All of the Destination Retirement Funds underperformed their respective custom benchmarks for the 12-month period. Of the five Destination Retirement Funds, only the Destination Retirement 2040 Fund outpaced the Lipper Balanced Fund Index – and by a very small margin. In addition, all five Funds trailed the S&P 500 Index. Conversely, all of the Destination Retirement Funds outperformed the Lehman Brothers Aggregate Bond Index for the 12-month time frame.

Destination Retirement Custom Benchmarks

- The Custom Destination Income Index comprises the MSCI® EAFE®, Dow Jones Wilshire 5000 (full cap), Lehman Brothers Aggregate Bond and T-Bill Indexes. The weightings of each Index can vary, depending on the weightings of the underlying mutual funds that comprise the Destination Retirement Income Fund.
- The Custom Destination 2010 Index comprises the MSCI EAFE, Dow Jones Wilshire 5000 (full cap), Lehman Brothers Aggregate Bond and T-Bill Indexes. The weightings of each Index can vary, depending on the weightings of the underlying mutual funds that comprise the Destination Retirement 2010 Fund.

- The Custom Destination 2020 Index comprises the MSCI EAFE, Dow Jones Wilshire 5000 (full cap) and Lehman Brothers Aggregate Bond Indexes. The weightings of each Index can vary, depending on the weightings of the underlying mutual funds that comprise the Destination Retirement 2020 Fund.
- The Custom Destination 2030 Index comprises the MSCI EAFE, Dow Jones Wilshire 5000 (full cap) and Lehman Brothers Aggregate Bond Indexes. The weightings of each Index can vary, depending on the weightings of the underlying mutual funds that comprise the Destination Retirement 2030 Fund.
- The Custom Destination 2040 Index comprises the MSCI EAFE and Dow Jones Wilshire 5000 (full cap) Indexes. The weightings of each Index can vary, depending on the weightings of the underlying mutual funds that comprise the Destination Retirement 2040 Fund.

What was the investment backdrop during the period?

The first quarter saw strong market gains with particular strength among smaller-capitalization stocks, foreign stocks and real estate investment trusts ("REITs"). Bonds generally lost ground; more economically sensitive, credit-oriented bonds rallied. The Lehman Brothers Aggregate Bond Index lost 0.64%, while the Lehman Brothers High Yield Index gained 2.89% and the Lehman Brothers U.S. Treasury Inflation Notes Index returned –2.24%. On the equity side, the S&P 500 Index gained 4.20% and the MSCI EAFE Index, a proxy for foreign stocks, advanced 9.40%. The Russell 2000® Index, a proxy for small-cap stocks, returned 13.94%. The Wilshire REIT Index gained 15.79%. The second quarter saw a reversal of much of the strong market gains of the first quarter, due in large part to investor concerns over rising short-term interest rates and economic growth. Smaller-capitalization stocks fell sharply, while large-cap stocks generally had more muted losses. Concerns that pressure on inflation from rising import prices (including energy) might cause the Federal Reserve ("Fed") to continue tightening interest rates were the main culprit.

Initially as the second quarter ended and the third quarter began, investors focused on the slowing growth engineered by the Fed's policy of rising rates and anticipated that the Fed would soon have to begin cutting rates. However, corporate profits continued to advance, oil prices dropped and the economy seemed to take the slowdown in the housing market with less damage to economic growth than many expected. As investors saw inflation pressures wane, they bid up investments such as stocks, high-yield bonds and REITs. Unseasonably warm temperatures during the peak demand season for energy contributed to the fall in prices for products such as oil and natural gas. This trend was the key driver in the collapse of Amaranth Capital, a large hedge fund. The market absorbed this news rather smoothly and in general, with the exception of some mid-year volatility in areas such as emerging markets, the period was characterized by rather limited volatility by most measures.

What factors contributed to the Funds' performance?

The performance of each Select Destination Retirement Fund is affected by the results of its underlying Funds. We believe that the MassMutual investment platform provides for a wide variety of strong investment options to choose from, which will provide a key benefit to successful investment results over the long term. However, during 2006, a number of Funds detracted from absolute and relative performance. Following strong returns in 2005, the Select Aggressive Growth Fund posted a negative return and sharply lagged its benchmark, the S&P 500 Index. The Premier Small Company Opportunities Fund, Select Growth Equity Fund and Select Large Value Fund each lagged the benchmark for its respective asset classes. Asset allocation was not the primary drag on relative performance, but it did have an impact. As inflation expectations fell during the year, Premier Inflation-Protected Bond Fund posted only modest absolute returns. In addition, not having a dedicated exposure to high-yield bonds and REITs presented an opportunity cost during the year.

What is your outlook?

We will continue to manage the Destination Retirement Fund Series with the goal of providing a vehicle for investors to confidently navigate the markets through any environment. As part of this effort, we have enhanced the way that we implement asset allocation. Our new approach seeks to deliver results that are more consistent with the asset allocation profile of each strategy, while maintaining the opportunity to add value through active management. To do this, we changed some of the underlying Funds, increased their number and introduced methods of managing the mix of risk and reward at each level of the portfolio management process. The goal is to deliver the optimal mix of risk and reward from the asset allocation decision (which asset classes to hold) and from security selection (which securities to hold within an asset class). As always, MassMutual will actively monitor the investment managers within each Fund and make changes when appropriate.

The investment return and principal value of shares of the Fund will fluctuate with market conditions so that shares of the Fund, when redeemed, may be worth more or less than their original cost. Current performance of the Fund may be lower or higher than the performance quoted. Performance data current to the most recent month end may be obtained by calling 1-888-309-3539.

Investors should note that the Fund is a professionally managed mutual fund, while the Custom Destination 2020 Index, the Lipper Balanced Fund Index, the Lehman Brothers Aggregate Bond Index and the S&P 500 Index are unmanaged, do not incur expenses, and cannot be purchased directly by investors. Investors should read the Fund's prospectus with regard to the Fund's investment objective, risks and charges and expenses in conjunction with these financial statements. Employee retirement benefit plans that invest plan assets in the Separate Investment Accounts (SIAs) may be subject to certain charges as set forth in their respective Plan Documents. Total return figures would be lower for the periods presented if they reflected these charges. The performance tables and charts do not reflect the deduction of taxes that a shareholder would pay on the Fund distributions or the redemption of the Fund shares.

^{*} The custom benchmark \$10,000 growth chart values commence on 1/1/04.

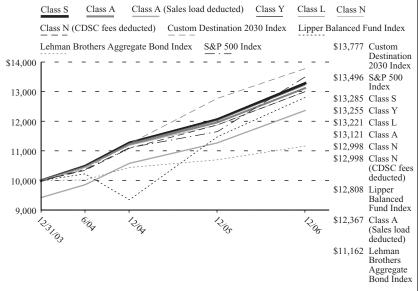

^{**} Class A (sales load deducted) returns include the 5.75% maximum sales charge and Class N (CDSC fees deducted) returns include the 1.00% maximum contingent deferred sales charge for the first 18 months shown.

Notes to Portfolio of Investments

EUR - Euro

FRN - Floating Rate Note

REIT - Real Estate Investment Trust

VRN - Variable Rate Note

- (a) Denotes all or a portion of security on loan. (*Note 2*).
- (b) The principal amount of the security is in foreign currency. The market value is in U.S. dollars.
- (c) Securities exempt from registration under rule 144A of the Securities Act of 1933. These securities may be resold in transactions exempt from registration, normally to qualified institutional buyers. At December 31, 2006, these securities amounted to a value of \$13,962,693 or 5.8% of net assets.
- (d) Amount represents shares owned of the fund.
- (e) This security is held as collateral for open futures contracts. $(Note\ 2)$.
- (f) Represents investments of security lending collateral. (*Note 2*).
- (g) Maturity value \$20,332,379. Collateralized by a U.S. Government Agency obligation with a rate of 5.85%, maturity date of 01/15/2033, and an aggregate market value, including accrued interest, of \$21,340,699.
- (h) See Note 6 for aggregate cost for Federal tax purposes.

^{***} Per share amount calculated on the average shares method.

[#] Computed after giving effect to an agreement by MassMutual to waive certain fees and expenses of the Fund.

⁽a) Employee retirement benefit plans that invest plan assets in the Separate Investment Accounts (SIAs) may be subject to certain charges as set forth in their respective Plan Documents. Total return figures would be lower for the period presented if they reflected these charges.

⁽b) Total Return excludes a front-end sales charge and would be lower for the period presented if it reflected these charges.

⁺ The Fund commenced operations on December 31, 2004.

[‡] Amounts are de minimus due to the short period of operations.

^{***} Per share amount calculated on the average shares method.

[†] Effective January 1, 2005, rebated brokerage commissions are included with realized gain or loss on investment transactions. Prior to January 1, 2005, these amounts were presented as a reduction of expenses. Prior year amounts have not been restated to reflect this change. (See Note 3)

[#] Computed after giving effect to an agreement by MassMutual to waive certain fees and expenses of the Fund.

⁽a) Employee retirement benefit plans that invest plan assets in the Separate Investment Accounts (SIAs) may be subject to certain charges as set forth by their respective Plan Documents. Total return figures would be lower for the periods presented if they reflected these charges.

⁽b) The Fund has entered into agreements with certain brokers to rebate a portion of brokerage commissions. The rebated commissions are used to reduce operating expenses of the Fund.

[#] Computed after giving effect to an agreement by MassMutual to waive certain fees and expenses of the Fund.

⁽a) Employee retirement benefit plans that invest plan assets in the Separate Investment Accounts (SIAs) may be subject to certain charges as set forth in their respective Plan Documents. Total return figures would be lower for the period presented if they reflected these charges.

⁽b) The Fund has entered into an agreement with certain brokers to rebate a portion of brokerage commissions. The rebated commissions are used to reduce operating expenses of the Fund.

⁽c) Total Return excludes contingent deferred sales charge and would be lower for the periods presented if it reflected these charges.

^{***} Per share amount calculated on the average shares mehod.

[†] Effective January 1, 2005, rebated brokerage commissions are included with realized gain or loss on investment transactions. Prior to January 1, 2005, these amounts were presented as a reduction of expenses. Prior year amounts have not been restated to reflect this change due to immateriality. (See Note 3)

^{††} Net investment income (loss) is less than \$0.01 per share.

[‡] Amounts are de minimis due to the short period of operations.

⁺⁺ Class N commenced operations on December 31, 2002.

[#] Computed after giving effect to an agreement by MassMutual to waive certain fees and expenses of the Fund.

⁽a) Employee retirement benefit plans that invest plan assets in the Separate Investment Accounts (SIAs) may be subject to certain charges as set forth in their respective Plan Documents. Total return figures would be lower for the periods presented if they reflected these charges.

⁽b) The Fund has entered into an agreement with certain brokers to rebate a portion of brokerage commissions. The rebated commissions are used to reduce operating expenses of the Fund.

⁽c) Total Return excludes contingent deferred sales charge and would be lower for the peiods presented if they reflected these charges.

Per share amount calculated on the average shares method.

Net investment loss is less than \$0.01 per share.

Amounts are de minimis due to the short period of operations.

Computed after giving effect to an agreement by MassMutual to waive certain fees and expenses of the Fund.

(b) used to reduce operating expenses of the Fund.

Effective January 1, 2005, brokerage commissions are included with realized gain or loss on investment transactions. Prior to January 1, 2005, these amounts were presented as a reduction of expenses. Prior year amounts have not been restated to reflect this change due to immateriality. (See Note 3)

Class N commenced operations on December 31, 2002.

Employee retirement benefit plans that invest plan assets in the Separate Investment Accounts (SIAs) may be subject to certain charges as set forth in their respective Plan Documents. Total return figures would be lower for the periods presented if they reflected these charges. The Fund has entered into agreement with certain brokers to rebate a portions of brokerage commissions. The rebated commissions are

Total Return excludes contingent deferred sales charge and would be lower for the periods presented if they reflected these charges.

Notes to Financial Statements

1. The Fund

MassMutual Select Funds (the "Trust") is registered under the Investment Company Act of 1940, as amended (the "1940 Act"), as an open-end, management investment company. The Trust is organized under the laws of the Commonwealth of Massachusetts as a Massachusetts business trust pursuant to an Agreement and Declaration of Trust dated May 28, 1993, as amended. The Trust consists of the following series (each individually referred to as a "Fund" or collectively as the "Funds"): MassMutual Select Strategic Bond Fund ("Strategic Bond Fund"), MassMutual Select Strategic Balanced Fund ("Strategic Balanced Fund"), MassMutual Select Diversified Value Fund ("Diversified Value Fund"), MassMutual Select Fundamental Value Fund ("Fundamental Value Fund"), MassMutual Select Value Equity Fund ("Value Equity Fund"), MassMutual Select Large Cap Value Fund ("Large Cap Value Fund"), MassMutual Select Indexed Equity Fund ("Indexed Equity Fund"), MassMutual Select Core Opportunities Fund ("Core Opportunities Fund"), MassMutual Select Blue Chip Growth Fund ("Blue Chip Growth Fund"), MassMutual Select Large Cap Growth Fund ("Large Cap Growth Fund"), MassMutual Select Growth Equity Fund ("Growth Equity Fund"), MassMutual Select Aggressive Growth Fund ("Aggressive Growth Fund"), MassMutual Select OTC 100 Fund ("OTC 100 Fund"), MassMutual Select Focused Value Fund ("Focused Value Fund"), MassMutual Select Mid-Cap Value Fund ("Mid-Cap Value Fund"), MassMutual Select Small Cap Value Equity Fund ("Small Cap Value Equity Fund"), MassMutual Select Small Company Value Fund ("Small Company Value Fund"), MassMutual Select Small Cap Core Equity Fund ("Small Cap Core Equity Fund"), MassMutual Select Mid Cap Growth Equity Fund ("Mid Cap Growth Equity Fund"), MassMutual Select Mid Cap Growth Equity II Fund ("Mid Cap Growth Equity II Fund"), MassMutual Select Small Cap Growth Equity Fund ("Small Cap Growth Equity Fund"), MassMutual Select Small Company Growth Fund ("Small Company Growth Fund"), MassMutual Select Emerging Growth Fund ("Emerging Growth Fund"), MassMutual Select Diversified International Fund ("Diversified International Fund"), MassMutual Select Overseas Fund ("Overseas Fund"), MassMutual Select Destination Retirement Income Fund ("Destination Retirement Income Fund"), MassMutual Select Destination Retirement 2010 Fund ("Destination Retirement 2010 Fund"), MassMutual Select Destination Retirement 2020 Fund ("Destination Retirement 2020 Fund"), MassMutual Select Destination Retirement 2030 Fund ("Destination Retirement 2030 Fund") and MassMutual Select Destination Retirement 2040 Fund ("Destination Retirement 2040 Fund").

The Core Opportunities Fund, Small Cap Value Equity Fund and Small Cap Core Equity Fund commenced operations on March 31, 2006.

The Mid-Cap Value Fund commenced operations on August 29, 2006. The Diversified International Fund commenced operations on December 14, 2006.

During the reporting period, each Fund had five classes of shares: Class A, Class L, Class Y, Class S and Class N. Additionally, the Indexed Equity Fund had a sixth class of shares: Class Z. The principal economic difference among the classes is the level of service and administration fees borne by the classes. The classes of shares are offered to different types of investors, as outlined in the Trust's Prospectus.

The five Destination Retirement Funds invest all of their investable assets in shares of various MassMutual Select Funds and MassMutual Premier Funds. The financial statements included herein are those of the Destination Retirement Funds and the applicable MassMutual Select Funds. The financial statements of the applicable MassMutual Premier Funds are presented separately and can be obtained from the SEC's EDGAR database on its Internet site at www.sec.gov or by calling MassMutual at 1-888-309-3539. The assets of each Destination Retirement Fund are diversified and a shareholder's interest is limited to the Premier or Select Funds in which the shares are invested.

2. Significant Accounting Policies

The following is a summary of significant accounting policies followed consistently by each Fund in the preparation of the financial statements in conformity with accounting principles generally accepted in the United States of America ("generally accepted accounting principles"). The preparation of the financial statements in accordance with generally accepted accounting principles requires management to make estimates and assumptions that affect the reported amounts and disclosures in the financial statements. Actual results could differ from those estimates.

Notes to Financial Statements (Continued)

Valuation

Investment Equity securities are valued on the basis of valuations furnished by a pricing service, authorized by the Board of Trustees"), which provides the last reported sale price for securities listed on a national securities exchange or the official closing price on the NASDAQ National Market System, or in the case of over-the-counter securities not so listed, the last reported bid price. Debt securities (other than short-term obligations with a remaining maturity of sixty days or less) are valued on the basis of valuations furnished by a pricing service, authorized by the Trustees, which determines valuations taking into account appropriate factors such as institutional-size trading in similar groups of securities, yield, quality, coupon rate, maturity, type of issue, trading characteristics and other market data. Shortterm securities with a remaining maturity of sixty days or less are valued at either amortized cost or at original cost plus accrued interest, whichever approximates current market value. Shares of other funds of the Trust are valued at their net asset value as reported on each business day. All other securities and other assets, including futures, options, swaps and debt securities for which the prices supplied by a pricing agent are deemed by the Trustees not to be representative of market values, including restricted securities and securities for which no market quotation is available, are valued at fair value in accordance with procedures approved by and determined in good faith by the Trustees, although the actual calculation may be done by others. Securities are typically valued on the basis of valuations furnished by a primary pricing service or, if no such valuation is available, from a secondary pricing service. However, valuation methods approved by the Trustees which are intended to reflect fair value may be used when pricing service information is not readily available or when a security's value is believed to have been materially affected by a significant event, such as a natural disaster, an economic event like a bankruptcy filing, or a substantial fluctuation in domestic or foreign markets, that has occurred after the close of the exchange or market on which the security is principally traded (for example, a foreign exchange or market). In such a case, a Fund's value for a security is likely to be different from the last quoted market price or pricing service information. In addition, for each of the Trust's foreign funds, a fair value pricing service is used to assist in the pricing of foreign securities. Due to the subjective and variable nature of fair value pricing, it is possible that the value determined for a particular asset may be materially different from the value realized upon such asset's sale.

> Portfolio securities traded on more than one national securities exchange are valued at the last price on the business day as of which such value is being determined at the close of the exchange representing the principal market for such securities. All assets and liabilities expressed in foreign currencies are converted into U.S. dollars at the mean between the buying and selling rates of such currencies against U.S. dollars last quoted by any major bank. If such quotations are not available, the rate of exchange is determined in accordance with policies established by the Trustees.

Securities Lending

Each Fund may lend its securities to qualified brokers; however, securities lending cannot exceed 33% of the total assets of the Funds taken at current value. The loans are collateralized at all times with cash or securities with a market value at least equal to 100% of the market value of the securities on loan. The market value of the loaned securities is determined at the close of business of the Fund and any additional collateral is delivered to the Fund the next business day. As with other extensions of credit, the Funds may bear the risk of delay in recovery or even loss of rights in the collateral should the borrower of the securities fail financially. The Funds receive compensation for lending their securities. At December 31, 2006, the Funds loaned securities having the following market values, collateralized by cash, which was invested in short-term instruments in the following amounts:

	Securities on Loan	Collateral
Strategic Bond Fund	\$ 14,825,885	\$ 15,283,053
Strategic Balanced Fund	28,194,092	29,253,785
Diversified Value Fund	26,189,434	27,183,659
Fundamental Value Fund	47,754,374	48,910,393
Value Equity Fund	6,707,808	6,963,434
Large Cap Value Fund	104,271,547	107,413,598
Indexed Equity Fund	113,952,082	117,861,275
Core Opportunities Fund	3,817,780	3,927,200
Blue Chip Growth Fund	37,542,652	38,801,978

Notes to Financial Statements (Continued)

	Securities on Loan	Collateral
Large Cap Growth Fund	\$ 2,699,044	\$ 2,771,858
Growth Equity Fund	25,119,511	25,872,686
Aggressive Growth Fund	52,664,202	54,641,303
OTC 100 Fund	7,490,800	7,749,326
Focused Value Fund	79,877,861	82,393,766
Small Cap Value Equity Fund	3,158,339	3,324,185
Small Company Value Fund	122,722,983	127,527,050
Small Cap Core Equity Fund	4,596,005	4,792,766

Mid Cap Growth Equity II Fund	174,351,264	180,540,632
Small Cap Growth Equity Fund	179,596,454	187,495,013
Small Company Growth Fund	43,510,600	45,467,348
Emerging Growth Fund	33,585,615	35,087,790
Overseas Fund	61,120,725	64,353,230

For each Fund the amount of securities on loan indicated in the table above may not correspond with the securities on loan identified on the Portfolio of Investments because securities with pending sales are in process of recall from the brokers. At December 31, 2006, the Strategic Balanced Fund, Indexed Equity Fund, Small Cap Value Equity Fund, Small Cap Growth Equity Fund and Small Company Growth Fund had securities on loan with pending sales with a value of \$549, \$129,608, \$107,800, \$1,864, and \$76,408, respectively.

The Trust receives, as fees, a share of the income earned on investment of the cash collateral received for the loan of securities. For the year ended December 31, 2006, the Trust earned securities lending income as follows:

	Securities Lending Gross Income	Securities Lending Fees and Expenses	Securities Lending Net Income
Strategic Bond Fund	\$ 552,265	\$ 524,318	\$ 27,947
Strategic Balanced Fund	921,372	879,165	42,207

Overseas Fund	4,493,976	3,976,159	517,817

Agreements

Repurchase Each Fund may enter into repurchase agreements with certain banks and broker/dealers whereby a Fund acquires a security for cash and obtains a simultaneous commitment from the seller to repurchase the security at an agreed upon price and date. The Funds, through their custodian, take possession of the securities collateralizing the repurchase agreement. The collateral is marked to market daily to ensure that the market value of the underlying assets remains sufficient to protect the Funds in the event of default by the seller. Collateral for certain tri-party repurchase agreements is held at the counterparty's custodian in a segregated account for the benefit of the Funds and the counterparty. In connection with transactions in repurchase agreements, if the seller defaults and the value of the collateral declines or if the seller enters insolvency proceedings, realization of collateral by the Funds may be delayed or limited.

Accounting for **Investments**

Investment transactions are accounted for on the trade date. Realized gains and losses on sales of investments and unrealized appreciation and depreciation of investments are computed on the specific identification cost method. Interest income, adjusted for amortization of discounts and premiums on debt securities, is earned from the settlement date and is recorded on the accrual basis. Dividend income is recorded on the ex-dividend date.

Federal Income Tax It is each Fund's intent to continue to comply with the provisions of subchapter M of the Internal Revenue Code of 1986, as amended (the "Code"), applicable to a regulated investment company. Under such provisions, the Funds will not be subject to federal income taxes on their ordinary income and net realized capital gains to the extent they are distributed or deemed to have been distributed to their shareholders. Therefore, no Federal income tax provision is required. Withholding taxes on foreign interest, dividends, and capital gains have been provided for in accordance with the applicable country's tax rules and rates.

Distributions to **Shareholders**

Dividends and Dividends from net investment income of each Fund are declared and paid annually and at other times as may be required to satisfy tax or regulatory requirements. Distributions of any net realized capital gains of each Fund are declared and paid annually and at other times as may be required to satisfy tax or regulatory requirements. Distributions to shareholders are recorded on the ex-dividend date. Income and capital gain distributions are determined in accordance with income tax regulations, which may differ from generally accepted accounting principles. These differences are primarily due to investments in forward contracts, passive foreign investment companies, the deferral of wash sale losses, and paydowns on certain mortgage-backed securities. As a result, net investment income and net realized gain on investment transactions for a reporting period may differ significantly from distributions during such period.

> Accordingly, the Funds may periodically make reclassifications among certain of their capital accounts without impacting the net asset value of the Funds.

> During the year ended December 31, 2006, the following amounts were reclassified due to differences between book and tax accounting.

	Paid-in Capital	Accumulated Net Realized Gain on Investments	Undistributed Net Investment Income
Strategic Bond Fund	\$ (35,892)	\$ (135,614)	\$ 171,506

Translation

Foreign Currency The books and records of the Funds are maintained in U.S. dollars. The market values of foreign currencies, foreign securities and other assets and liabilities denominated in foreign currencies are translated into U.S. dollars at the mean of the buying and selling rates of such currencies against the U.S. dollar at the end of each business day. Purchases and sales of foreign securities and income and expense items are translated at the rates of exchange prevailing on the respective dates of such transactions. The Funds do not isolate that portion of the results of operations arising from changes in the exchange rates from that portion arising from changes in the market prices of securities. Net realized foreign currency gains and losses resulting from changes in exchange rates include foreign currency gains and losses between trade date and settlement date on investment securities transactions, foreign currency transactions and the difference between the amounts of dividends recorded on the books of the Funds and the amount actually received.

Currency Contracts

Forward Foreign Each Fund may enter into forward foreign currency contracts in order to hedge the effect of currency movements of foreign denominated securities or obligations, or for the Diversified International Fund to generate additional returns by buying currencies in excess of underlying equities when opportunities arise. A forward foreign currency contract is an agreement between two parties to buy and sell a currency at a set price on a future date. The market value of a forward foreign currency contract fluctuates with changes in foreign currency exchange and interest rates. Forward foreign currency contracts are marked to market daily and the change in their value is recorded by the Funds as an unrealized gain or loss. When a forward foreign currency contract is extinguished, through delivery or offset by entering into another forward foreign currency contract, the Funds record a realized gain or loss equal to the difference between the value of the contract at the time it was opened and the value of the contract at the time it was extinguished or offset.

> Forward foreign currency contracts involve a risk of loss from the potential inability of counterparties to meet the terms of their contracts and from unanticipated movements in foreign currency values and interest rates.

The notional or contractual amounts of these instruments represent the investments the Funds have in particular classes of financial instruments and do not necessarily represent the amounts potentially subject to risk. The measurement of the risk associated with these instruments is meaningful only when all related and offsetting transactions are considered.

A summary of open forward foreign currency contracts for the Strategic Bond Fund and Strategic Balanced Fund at December 31, 2006 is as follows:

Settlement Date	Contracts to Deliver/Receive	Units of Currency	In Exchange for U.S. Dollars	Contracts at Value	Unrealized Appreciation (Depreciation)

Delayed Delivery Transactions, When Issued Securities, and Forward Commitments Each Fund may purchase or sell securities on a "when issued" or delayed delivery or on a forward commitment basis. The Funds use forward commitments to manage interest rate exposure or as a temporary substitute for purchasing or selling particular debt securities. Payment and delivery may take place after the customary settlement period for that security. The price of the underlying securities and the date when the securities will be delivered and paid for are fixed at the time the transaction is negotiated. These securities are valued on the basis of valuations furnished by a pricing service, authorized by the Trustees, which determines valuations taking into account appropriate factors such as institutional-size trading in similar groups of securities, yield, quality, coupon rate, maturity, type of issue, trading characteristics and other market data. Securities for which no market quotation is available, are valued at fair value in accordance with procedures approved by and determined in good faith by the Trustees, although the actual calculation may be done by others. The Funds record on a daily basis the unrealized appreciation (depreciation) based upon changes in the value of these securities. When a forward commitment contract is closed, the Funds record a realized gain or loss equal to the difference between the value of the contract at the time it was opened and the value of the contract at the time it was closed. Losses may arise due to changes in the value of the underlying securities or if the counterparty does not perform under the contract, or if the issuer does not issue the securities due to political, economic, or other factors. Funds monitor exposure to ensure counterparties are creditworthy and concentration of exposure is minimized.

At December 31, 2006 the Funds had no open obligations under these delayed delivery transactions, when issued securities and forward commitments.

Financial Futures Contracts

The Funds may purchase and sell financial futures contracts and options on such futures contracts for the purpose of hedging the market risk on existing securities or as a substitute for the purchase of securities. Futures contracts are contracts for delayed delivery of securities at a specific future date and at a specific price or yield. Upon entering into a contract, the Funds deposit and maintain as collateral

such initial margin as required by the exchange on which the transaction is effected. Pursuant to the contract, the Fund agrees to receive from or pay to the broker an amount of cash equal to the daily fluctuation in value of the contract. Such receipts or payments are known as variation margin and are recorded by the Funds as unrealized gains or losses. When the contract is closed, each Fund records a realized gain or loss equal to the difference between the value of the contract at the time it was opened and the value at the time it was closed. Futures contracts are valued at the settlement price established each day by the board of trade or exchange on which they are traded.

A summary of open futures contracts for the Strategic Bond Fund, Strategic Balanced Fund, Indexed Equity Fund, Growth Equity Fund, OTC 100 Fund, Small Cap Value Equity Fund, Small Cap Core Equity Fund and the Diversified International Fund at December 31, 2006, is as follows:

Options

The Funds may purchase put and call options. By purchasing a put option, a Fund obtains the right (but not the obligation) to sell the instrument underlying the option at a fixed strike price. In return for this right, a Fund pays the current market price for the option (known as the option premium). Options have various types of underlying instruments, including specific securities, indexes of securities, indexes of security prices, indexes of interest rates, futures contracts and swap agreements. A Fund may terminate its position in a put option it has purchased by allowing it to expire or by exercising the option. A Fund may also close out a put option position by entering into an offsetting transaction, if a liquid market exists. If the option is allowed to expire, a Fund will lose the entire premium it paid. Premiums paid for purchasing options which expire are treated as realized losses. If a Fund exercises a put option on a security, it will sell the instrument underlying the option at the strike price. If a Fund exercises an option on an index, settlement is in cash and does not involve the actual sale of securities.

The buyer of a typical put option can expect to realize a gain if the price of the underlying instrument falls substantially. However, if the price of the instrument underlying the option does not fall enough to offset the cost of purchasing the option, a put buyer can expect to suffer a loss (limited to the amount of the premium paid, plus related transaction costs).

The features of call options are essentially the same as those of put options, except that the purchaser of a call option obtains the right to purchase, rather than sell, the instrument underlying the option at the option's strike price. A call buyer typically attempts to participate in potential price increases of the instrument underlying the option with risk limited to the cost of the option if security prices fall. At the same time, the buyer can expect to suffer a loss if security prices do not rise sufficiently to offset the cost of the option. See the Portfolio of Investments of the Strategic Bond Fund and Strategic Balanced Fund for open purchased option contracts as of December 31, 2006.

The Funds may also "write" put and call options. When a Fund writes a put option, it takes the opposite side of the transaction from the option's purchaser. In return for receipt of the premium, a Fund assumes the obligation to pay the strike price for the instrument underlying the option if the other party to the option chooses to exercise it. A Fund may seek to terminate its position in a put option it writes before exercise by purchasing an offsetting option in the market at its current price. If the market is not liquid for a put option a Fund has written, however, a Fund must continue to be prepared to pay the strike price while the option is outstanding, regardless of price changes, and must continue to post margin as discussed below.

If the price of the underlying instrument rises, a put writer would generally expect to profit, although its gain would be limited to the amount of the premium it received. If security prices remain the same over time, it is likely that the writer will also profit, because it should be able to close out the option at a lower price. If security prices fall, the put writer would expect to suffer a loss. This loss should be less than the loss from purchasing and holding the underlying instrument directly, however, because the premium received for writing the option should offset a portion of the decline.

Writing a call option obligates a Fund to sell or deliver the option's underlying instrument in return for the strike price upon exercise of the option. The characteristics of writing call options are similar to those of writing put options, except that writing calls generally is a profitable strategy if prices remain the same or fall. Through receipt of the option premium a call writer offsets part of the effect of a price increase. At the same time, because a call writer must be prepared to deliver the underlying instrument in return for the strike price, even if its current value is greater, a call writer gives up some ability to participate in security price increases.

The writer of an exchange traded put or call option on a security, an index of securities or a futures contract is required to deposit cash or securities or a letter of credit as margin and to make mark to market payments of variation margin as the position becomes unprofitable. When a Fund writes a call or put option, an amount equal to the premium received is recorded as a liability. Premiums received from writing options which expire are treated as realized gains. Premiums received from writing options which are exercised or closed are added to the proceeds or offset against the amount paid on the underlying investments to determine the realized gain or loss.

A summary of open written option contracts for the Strategic Bond Fund and the Strategic Balanced Fund at December 31, 2006, is as follows:

Transactions in options written for the Strategic Bond Fund and the Strategic Balanced Fund during the year ended December 31, 2006 were as follows:

	Number of Contracts	Premiums Received
Strategic Bond Fund		
Options outstanding at December 31, 2005	257	\$ 153,125
Options written	2,807	1,329,794
Options terminated in closing purchase transactions	(2,277)	(1,083,869)
Options outstanding at December 31, 2006	<u></u>	\$ 399,050
Strategic Balanced Fund		
Options outstanding at December 31, 2005	233	\$ 138,098
Options written	1,205	582,457
Options terminated in closing purchase transactions	(1,148)	(572,692)
Options outstanding at December 31, 2006	<u>290</u>	<u>\$ 147,863</u>

Exchange traded options are valued at the last sale price, or if no sales are reported, the last bid price for purchased options and the last ask price for written options. Options traded over-the-counter are valued using prices supplied by a primary pricing source chosen by the Trust.

Swaps

The Funds may engage in swap transactions, including, but not limited to, interest rate, currency, credit default, indices, basket, specific security and commodity swaps, interest rate caps, floors and collars and options on swaps (collectively defined as "swap transactions").

Each Fund may enter into swap transactions for any legal purpose consistent with its investment objective and policies, such as for the purpose of attempting to obtain or preserve a particular return or spread at a lower cost than obtaining that return or spread through purchases and/or sales of instruments in cash markets, to protect against currency fluctuation, as a duration management technique, to protect against any increase in the price of securities a Fund anticipates purchasing at a later date, or to gain exposure to certain markets in the most economical way possible. A Fund will not sell interest rate caps, floors or collars if it does not own securities with coupons which provide the interest that a Fund may be required to pay.

Swap agreements are two-party contracts entered into primarily by institutional counterparties for periods ranging from a few weeks to several years. In a standard swap transaction, two parties agree to exchange the returns (or differentials in rates of return) that would be earned or realized on specified notional investments or instruments. The gross returns to be exchanged or "swapped" between the parties are calculated by reference to a "notional amount," i.e., the return on or increase in value of a particular dollar amount invested at a particular interest rate, in a particular foreign currency or commodity, or in a "basket" of securities representing a particular index. The purchaser of an interest rate cap or floor, upon payment of a fee, has the right to receive payments (and the seller of the cap is obligated to make payments) to the extent a specified interest rate exceeds (in the case of a cap) or is less than (in the case of a floor) a specified level over a specified period of time or at specified dates. The purchaser of an interest rate collar, upon payment of a fee, has the right to receive payments (and the seller of the collar is obligated to make payments) to the extent that a specified interest rate falls outside an agreed upon range over a specified period of time or at specified dates. The purchaser of an option on an interest rate swap, upon payment of a fee (either at the time of purchase or in the form of higher payments or lower receipts within an interest rate swap transaction) has the right, but not the obligation, to initiate a new swap transaction of a pre-specified notional amount with pre-specified terms with the seller of the option as the counterparty.

The amount of a Fund's potential gain or loss on any swap transaction is not subject to any fixed limit. Nor is there any fixed limit on a Fund's potential loss if it sells a cap or collar. If the Fund buys a cap, floor or collar, however, the Fund's potential loss is limited to the amount of the fee that it has paid. When measured against the initial amount of cash required to initiate the transaction, which is typically zero in the case of most conventional swap transactions, swaps, caps, floors and collars tend to be more volatile than many other types of instruments.

The Funds will maintain cash or liquid assets in an amount sufficient at all times to cover its current obligations under its swap transactions, caps, floors and collars. If a Fund enters into a swap agreement on a net basis, it will segregate assets with a daily value at least equal to the excess, if any, of a Fund's accrued obligations under the swap agreement over the accrued amount a Fund is entitled to receive under the agreement. If a Fund enters into a swap agreement on other than a net basis, or sells a cap, floor or collar, it will segregate assets with a daily value at least equal to the full amount of a Fund's accrued obligation under the agreement.

During the term of a swap, cap, floor or collar, changes in the value of the instrument are recognized as unrealized gains or losses by marking to market to reflect the market value of the instrument. When the instrument is terminated, a Fund will record a realized gain or loss equal to the difference, if any, between the proceeds from (or cost of) the closing transaction and a Fund's basis in the contract.

During the term of a swap, cap, floor or collar, the periodic net payments can be made for a set period of time or may be triggered by a predetermined credit event. The net periodic payments may be based on a fixed or variable interest rate; the change in market value of a specific security, basket of securities or index; or the return generated by a security. These periodic payments received or made by the Trust are recorded in the accompanying Statement of Operations as realized gains and losses, respectively.

The Funds may enter into credit default swaps to buy or sell credit protection on an individual issuer or a basket of issuers of bonds. When a Fund is the buyer of a credit default swap contract, the Fund is entitled to receive the par or other agreed-upon value, of a referenced debt obligation from the counterparty to the contract in the event of a default by a third party, such as a U.S. or foreign corporate issuer, on the debt obligation. In return, the Fund would pay the counterparty a periodic stream of payments over the term of the contract provided that no event of default has occurred. If no default occurs, the Fund would have spent the stream of payments and received no benefit from the contract. When a Fund is the seller of a credit default swap contract, it receives the stream of payments, but is obligated to pay upon default of the referenced debt obligation. As the seller, the Fund would effectively add leverage to its portfolio because, in addition to its total net assets, the Fund would be subject to investment exposure on the notional amount of the swap. During the period that the credit default swap contract is open, the contract is marked to market in accordance with the terms of the contract based on the current interest rate spreads and credit risk of the referred obligation of the underlying issuer and interest accrual through valuation date. Changes in the value of credit default swap contracts are recorded as unrealized gains or losses and periodic cash settlements are recorded as realized gains or losses. The Fund will segregate assets in the form of cash and cash equivalents in an amount equal to the aggregate market value of the credit default swaps of which it is the seller, marked to market on a daily basis. These transactions involve certain risks, including the risk that the seller may be unable to fulfill the transaction.

A summary of open swap agreements for the Strategic Balanced Fund at December 31, 2006, is as follows:

Operating Activity

Allocation of In maintaining the records for the Funds, the income and expense accounts are allocated to each class of shares. Investment income, unrealized and realized gains or losses are prorated among the classes of shares based on the relative net assets of each. Expenses are allocated to each class of shares depending on the nature of the expenditures. Administration and service fees, which are directly attributable to a class of shares, are charged to that class' operations. Expenses of the Fund not directly attributable to the operations of any class of shares or Fund are prorated among the Funds and classes to which the expense relates based on the relative net assets of each.

> In addition, the Destination Retirement Income Fund, Destination Retirement 2010 Fund, Destination Retirement 2020 Fund, Destination Retirement 2030 Fund and Destination Retirement 2040 Fund will also incur certain fees and expenses indirectly as a shareholder in the underlying funds. Because the underlying funds have varied expense and fee levels and each Fund may own different proportions of underlying funds at different times, the amount of fees and expenses indirectly incurred by each Fund will vary.

Foreign Securities

The Diversified International Fund and Overseas Fund invests substantially all of its assets in foreign securities. The other Funds may also invest in foreign securities, subject to certain percentage restrictions. Investing in securities of foreign companies and foreign governments involves special risks and considerations not typically associated with investing in securities of U.S. companies and the U.S. Government. These risks include revaluation of currencies and future adverse political and economic developments. Moreover, securities of many foreign companies and foreign governments and their markets may be less liquid and their prices more volatile than those of securities of comparable U.S. companies and the U.S. Government.

3. Management Fees and Other **Transactions**

Management Fees

Investment Under agreements between the Trust and Massachusetts Mutual Life Insurance Company ("MassMutual") on behalf of each Fund, MassMutual is responsible for providing investment management services for each Fund. In return for this service, MassMutual receives advisory fees monthly based upon each Fund's average daily net assets at the following annual rates:

Strategic Bond Fund	0.55%	Small Cap Value Equity	0.75%
Strategic Balanced Fund	0.60%	Small Company Value Fund	0.85%
Diversified Value Fund	0.50%	Small Cap Core Equity Fund	0.75%
Fundamental Value Fund	0.65%	Mid Cap Growth Equity Fund	0.70%
Value Equity Fund	0.70%	Mid Cap Growth Equity II Fund	0.75%
Large Cap Value Fund	0.65%	Small Cap Growth Equity Fund	0.82%
Indexed Equity Fund	0.10%	Small Company Growth Fund	0.85%
Core Opportunities Fund	0.70%	Emerging Growth Fund	0.79%
Blue Chip Growth Fund	0.70%	Diversified International Fund	0.90%
Large Cap Growth Fund	0.65%	Overseas Fund	1.00%
Growth Equity Fund	0.68%	Destination Retirement Income Fund	0.05%
Aggressive Growth Fund	0.73%	Destination Retirement 2010 Fund	0.05%
OTC 100 Fund	0.15%	Destination Retirement 2020 Fund	0.05%
Focused Value Fund	0.69%	Destination Retirement 2030 Fund	0.05%
Mid-Cap Value Fund	0.70%	Destination Retirement 2040 Fund	0.05%

MassMutual has also entered into investment sub-advisory agreements with the following unaffiliated investment sub-advisers: AllianceBernstein L.P. for the Diversified Value Fund, the Large Cap Growth Fund and the Diversified International Fund; Wellington Management Company, LLP for the Fundamental Value Fund and a portion of the Small Cap Growth Equity Fund; Fidelity Management & Research Company for the Value Equity Fund; Davis Selected Advisers, L.P. for the Large Cap Value Fund; Northern Trust Investments, N.A. for the Indexed Equity Fund and the OTC 100 Fund; Grantham, Mayo, Van Otterloo & Co. LLC for the Growth Equity Fund; Sands Capital Management, LLC for a portion of the Aggressive Growth Fund; Cooke & Bieler, L.P. for the Mid-Cap Value Fund and a portion of the Focused Value Fund; Harris Associates, L.P. for a portion of the Focused Value Fund and a portion of the Overseas Fund; Clover Capital Management, Inc. for a portion of the Small Company Value Fund; EARNEST Partners, LLC for a portion of the Small Company Value Fund; Navellier & Associates, Inc. for the Mid Cap Growth Equity Fund; T. Rowe Price Associates, Inc. for the Blue Chip Growth Fund, the Mid Cap Growth Equity II Fund and a portion of the Small Company Value Fund; Waddell & Reed Investment Management Company for a portion of the Small Cap Growth Equity Fund; Mazama Capital Management, Inc. for a portion of the Small Company Growth Fund; Eagle Asset Management, Inc. for a portion of the Small Company Growth Fund; Delaware Management Company for a portion of the Emerging Growth Fund; Insight Capital Research & Management, Inc. for a portion of the Emerging Growth Fund; Massachusetts Financial Services Company for a portion of the Overseas Fund; Western Asset Management Company for a portion of

the Strategic Bond Fund and a portion of the Strategic Balanced Fund; Western Asset Management Company Limited for a portion of the Strategic Bond Fund and a portion of the Strategic Balanced Fund; ClearBridge Advisors, LLC for a portion of the Strategic Balanced Fund; Victory Capital Management, Inc. for the Core Opportunities Fund; SSgA Funds Management, Inc. for the Small Cap Value Equity Fund; and Goldman Sachs Asset Management, L.P. for the Small Cap Core Equity Fund. Effective June 5, 2006, Delaware Management Company manages the investment and reinvestment for a portion of the Aggressive Growth Fund. Prior to February 16, 2006, Fidelity Management & Research Company managed the investment and reinvestment of the Blue Chip Growth Fund. Prior to July 11, 2006, RS Investment Management, L.P. managed the investment and reinvestment of the Emerging Growth Fund. MassMutual pays a sub-advisory fee to each of these sub-advisers based upon the aggregate net assets under management which include (1) the average daily net assets of the specified Fund which it manages, and (2) the average daily net assets of all other funds or accounts of MassMutual or its affiliates for which the sub-adviser provides sub-advisory services and which have substantially the same investment objective, policies and investment strategies.

The Fund sub-adviser fees are paid out of the management fees previously disclosed above.

Administration Fees

Under separate administrative and shareholder services agreements between each Fund and MassMutual, MassMutual provides certain administrative and shareholder services and bears some class specific administrative expenses. In return for these services, MassMutual receives an administrative services fee monthly based upon the average daily net assets of the applicable class of shares of the Fund at the following annual rates:

	Class A	Class L	Class Y	Class S	Class Z	Class N

Service Fees

Distribution and MML Distributors, LLC (the "Distributor") acts as distributor to each Fund. Pursuant to separate 12b-1 Plans adopted by the Funds, Class A shares of each fund pay a fee of 0.25% of the average daily net asset value of the Fund to: (i) the Distributor for services provided and expenses incurred by its connection with the distribution of Class A shares of the Fund; and (ii) MassMutual for services provided and expenses incurred by it for purposes of maintaining or providing personal services to Class A shareholders. Pursuant to separate 12b-1 Plans adopted by the Funds, Class N shares of each fund pay a fee of 0.50% of the average daily net asset value of the Fund as follows: 0.25% of the average daily net asset value of the Fund to the Distributor for services provided and expenses incurred by its connection with the distribution of Class N shares of the Fund; and 0.25% of the average daily net asset value of the Fund to MassMutual for services provided and expenses incurred by it for purposes of maintaining or providing personal services to Class N shareholders. The Distribution fee may be spent by the Distributor on any activities or expenses primarily intended to result in the sale of Class A or Class N shares of the Fund. The Servicing Fee may be spent by MassMutual on personal services rendered to Class A or Class N shareholders of a Fund and/or maintenance of Class A or Class N shareholder accounts. The Distributor is a majority owned subsidiary of MassMutual. In addition, OppenheimerFunds Distributor, Inc. (the "Sub-Distributor") acts as a sub-distributor to each Fund. The Sub-Distributor is an affiliate of the Distributor and an indirect majority owned subsidiary of MassMutual.

Indirect Expenses

The Destination Retirement Income Fund, Destination Retirement 2010 Fund, Destination Retirement 2020 Fund, Destination Retirement 2030 Fund and Destination Retirement 2040 Fund incur fees and expenses indirectly as shareholders in the underlying funds. For the year ended December 31, 2006, these expenses were as follows:

	Indirect Operating Expenses
Destination Retirement Income Fund	0.65%
Destination Retirement 2010 Fund	0.69%
Destination Retirement 2020 Fund	0.74%
Destination Retirement 2030 Fund	0.84%
Destination Retirement 2040 Fund	0.88%

Waivers

Expense Caps and MassMutual agreed to cap the fees and expenses of the following Funds through March 31, 2007, unless otherwise noted, as follows:

Net Capital loss carryforwards may be applied against any net realized taxable gains in each succeeding year, or until their respective expiration dates, whichever occurs first.

Certain differences exist from the amounts reflected in the Statement of Changes in Net Assets primarily due to the character of short-term capital gains treated as ordinary income for tax purposes.

The Funds distinguish between distributions on a tax basis and financial reporting basis. Accounting principles generally accepted in the United States of America require that only distributions in excess of tax basis earnings and profits be reported in the financial statements as a return of capital.

The tax character of distributions paid during the year ended December 31, 2006 was as follows:

	Ordinary Income	Long Term Capital Gain	Short Term Capital Gain	Return of Capital
Strategic Bond Fund	\$ 9,053,907	\$ -	\$ -	\$ -

8. New Accounting Pronouncements

On July 13, 2006, the Financial Accounting Standards Board (FASB) released FASB Interpretation No. 48 "Accounting for Uncertainty in Income Taxes" (FIN 48). FIN 48 provides guidance for how uncertain tax positions should be recognized, measured, presented and disclosed in the financial statements. FIN 48 requires the evaluation of tax positions taken or expected to be taken in the course of preparing the fund's tax returns to determine whether the tax positions are "more-likely-than not" of being sustained by the applicable tax authority. Adoption of FIN 48 is required during the first financial reporting period for fiscal years beginning after December 15, 2006 and is to be applied to all open tax years as of the effective date. At this time, management is evaluating the implications of FIN 48 and its impact on the financial statements has not yet been determined.

In addition, in September 2006, Statement of Financial Accounting Standards No. 157, Fair Value Measurements (SFAS 157), was issued and is effective for fiscal years beginning after November 15, 2007. SFAS 157 determines fair value, establishes a framework for measuring fair value and expands disclosures about fair value measurements. Management is currently evaluating the impact the adoption of SFAS 157 will have on the Funds' financial statement disclosures.

9. Proxy Voting (Unaudited)

A description of the policies and procedures that each Fund's investment adviser and sub-advisers use to vote proxies relating to the Fund's portfolio securities is available, without charge, upon request, by calling 1-888-309-3539, and on the Securities and Exchange Commission's website at http://www.sec.gov.

Information regarding how the Funds voted proxies relating to portfolio securities during the most recent 12-month period ended June 30 is available, without charge, upon request, on the MassMutual website at http://www.massmutual.com/retire and on the Securities and Exchange Commission's website at http://www.sec.gov.

10. Quarterly
Reporting
(Unaudited)

The Funds file their complete schedule of portfolio holdings with the SEC for the first and third quarters of each fiscal year on Form N-Q. The Funds' Forms N-Q are available on the SEC website at http://www.sec.gov. The Funds' Forms N-Q may be reviewed and copied at the SEC's Public Reference Room in Washington D.C. Information on the operation of the SEC's Public Reference Room may be obtained by calling 1-800-SEC-0330.

11. Trustees' Approval of Investment
Advisory
Contracts
(Unaudited)

At a meeting held on August 7, 2006, the Board of Trustees of the Trust, including the Trustees who are not "interested persons" (as such term is defined in the 1940 Act) of the Trust, the Adviser or Sub-Advisers (the "Independent Trustees"), approved the Advisory Agreement and Sub-Advisory Agreement for the Mid-Cap Value Fund, subject to approval by the shareholders of the Fund of the Advisory Agreement and Sub-Advisory Agreement. In preparation for the meeting, the Trustees requested, and the Adviser and Sub-Adviser provided in advance of the meeting, certain materials relevant to the consideration of the Advisory Agreement and Sub-Advisory Agreement. The Trustees also requested, and received in advance of the meeting, a fee study report with respect to the Fund prepared by the Adviser using information provided by an independent third-party vendor. This fee study identified relevant peer group funds and presented comparative information concerning advisory fees and total expense ratios. The Trustees also received in board materials in advance of the meeting memoranda prepared by counsel to the Independent Trustees addressing their duties and responsibilities in approving the Advisory Agreement and Sub-Advisory Agreement, including identification of types of information relevant to such consideration.

At the meeting, representatives of the Adviser made an extensive presentation concerning the Adviser's operations and capabilities as well as the investment strategy to be pursued by the Fund and the Sub-Adviser's capabilities in managing such a strategy.

In approving the Advisory Agreement, the Trustees took note of the fact that the Adviser would delegate substantially all responsibility for furnishing a continuous investment program for the Fund, and making investment decisions with respect to the Fund's assets, to the Sub-Adviser. The Trustees examined the Adviser's ability to provide investment oversight, administrative and shareholder services to the Fund. The Trustees also considered the experience and qualifications of the personnel of the Adviser that would be performing, or overseeing the performance of, the services to be provided to the Fund and the needs of the Fund for administrative and shareholder services. Based on the above, the Trustees concluded that the resources to be devoted by the Adviser were appropriate to fulfill effectively its duties under the Advisory Agreement.

The Trustees considered a number of factors they believed to be relevant to the interests of shareholders of the Fund. Such factors included (i) the ability of the Adviser to monitor the operations and performance of the Fund's Sub-Adviser, (ii) the financial condition, stability and business strategy of the Adviser, (iii) the ability of the Adviser with respect to regulatory compliance and the ability to monitor compliance with the investment policies of the Fund, (iv) possible economies of scale, and (v) any conditions affecting the Adviser's future provision of high quality services to the Fund. The Trustees concluded that the anticipated scope and quality of the services to be provided by the Adviser were satisfactory, in light of market conditions, the resources to be dedicated by the Adviser and its integrity, personnel, and financial resources, to merit approval of the Advisory Agreement.

The Trustees took into account not only the actual dollar amount of fees to be paid by the Fund to the Adviser, but also took into account the estimated profitability of the Fund to the Adviser and the so-called "fallout benefits" to the Adviser, such as any reputational value derived from serving as investment adviser to the Fund. The Trustees considered the fact that the advisory fee did not contain breakpoints due to the Adviser choosing to price for the long-term. The Trustees also reviewed the historical performance of the Sub-Adviser for accounts with investment objectives, policies and investment strategies similar to that of the Fund.

Based on the foregoing, the Trustees concluded that the fees to be paid to the Adviser under the Advisory Agreement and the Fund's total expenses were fair and reasonable, given the anticipated scope and quality of the services to be rendered by the Adviser.

In approving the Sub-Advisory Agreement with respect to the Fund, the Trustees considered a wide range of information about, among other things: the Sub-Adviser and its personnel with responsibilities for providing services to the Fund; the terms of the Sub-Advisory Agreement; the scope and quality of services to be provided to the Fund under the Sub-Advisory Agreement; and the fees payable to the Sub-Adviser by the Adviser. The Trustees were informed that the sub-advisory fee was negotiated at arm's length. The Trustees were also informed that the Sub-Adviser may receive research services from brokers in connection with portfolio securities transactions for the Fund and that research services furnished by brokers through which the Fund effects securities transactions may be used by the Sub-Adviser in advising other accounts that it advises. Conversely, research services furnished to the Sub-Adviser in connection with other accounts the Sub-Adviser advises may be used by the Sub-Adviser in advising the Fund.

Based on the foregoing, the Trustees concluded that the investment processes, research capabilities and philosophies of the Sub-Adviser would be well suited to the Fund, given its investment objectives and policies.

Following their review, the Trustees determined that the terms of the Advisory Agreement and Sub-Advisory Agreement were fair and reasonable with respect to the Fund and were in the best interests of the Fund's shareholders. After carefully considering the information summarized above, the Trustees, including the Independent Trustees voting separately, unanimously voted to approve the Advisory Agreement and the Sub-Advisory Agreement.

Prior to the votes being taken to approve the Advisory Agreement and Sub-Advisory Agreement, the Independent Trustees met separately in executive session to discuss the appropriateness of such contracts. In their deliberations with respect to these matters, the Independent Trustees were advised by their independent legal counsel. The Independent Trustees weighed the foregoing matters in light of the advice given to them by their independent legal counsel as to the law applicable to the review of investment advisory contracts. In arriving at a decision, the Trustees, including the Independent Trustees, did not identify any single matter as all-important or controlling. The foregoing summary does not detail all of the matters considered.

At a meeting held on November 6, 2006, the Board of Trustees of the Trust, including the Independent Trustees, approved the Advisory Agreement and Sub-Advisory Agreement for the Diversified International Fund, subject to approval by the shareholders of the Fund of the Advisory Agreement and Sub-Advisory Agreement. In preparation for the meeting, the Trustees requested, and the Adviser and Sub-Adviser provided in advance of the meeting, certain materials relevant to the consideration of the Advisory Agreement and Sub-Advisory Agreement. The Trustees also requested, and received in advance of the meeting, a fee study report with respect to the Fund prepared by the Adviser using information provided by an independent third-party vendor. This fee study identified relevant peer group funds and presented comparative information concerning advisory fees and total expense ratios. The Trustees also received in board materials in advance of the meeting memoranda prepared by counsel to the Independent Trustees addressing their duties and responsibilities in approving the Advisory Agreement and Sub-Advisory Agreement, including identification of types of information relevant to such consideration.

At the meeting, representatives of the Adviser made an extensive presentation concerning the Adviser's operations and capabilities as well as the investment strategy to be pursued by the Fund and the Sub-Adviser's capabilities in managing such a strategy.

In approving the Advisory Agreement, the Trustees took note of the fact that the Adviser would delegate substantially all responsibility for furnishing a continuous investment program for the Fund, and making investment decisions with respect to the Fund's assets, to the Sub-Adviser. The Trustees examined the Adviser's ability to provide investment oversight, administrative and shareholder services to the Fund. The Trustees also considered the experience and qualifications of the personnel of the Adviser that would be performing, or overseeing the performance of, the services to be provided to the Fund and the needs of the Fund for administrative and shareholder services. Based on the above, the Trustees concluded that the resources to be devoted by the Adviser were appropriate to fulfill effectively its duties under the Advisory Agreement.

The Trustees considered a number of factors they believed to be relevant to the interests of shareholders of the Fund. Such factors included (i) the ability of the Adviser to monitor the operations and performance of the Fund's Sub-Adviser, (ii) the financial condition, stability and business strategy of the Adviser, (iii) the ability of the Adviser with respect to regulatory compliance and the ability to monitor compliance with the investment policies of the Fund, (iv) possible economies of scale, and (v) any conditions affecting the Adviser's future provision of high quality services to the Fund. The Trustees concluded that the anticipated scope and quality of the services to be provided by the Adviser were satisfactory, in light of market conditions, the resources to be dedicated by the Adviser and its integrity, personnel, and financial resources, to merit approval of the Advisory Agreement.

The Trustees took into account not only the actual dollar amount of fees to be paid by the Fund to the Adviser, but also took into account the estimated profitability of the Fund to the Adviser and the so-called "fallout benefits" to the Adviser, such as any reputational value derived from serving as investment adviser to the Fund. The Trustees considered the fact that the advisory fee did not contain breakpoints due to the Adviser choosing to price for the long-term. The Trustees also reviewed the historical performance of the Sub-Adviser for accounts with investment objectives, policies and investment strategies similar to that of the Fund.

Based on the foregoing, the Trustees concluded that the fees to be paid to the Adviser under the Advisory Agreement and the Fund's total expenses were fair and reasonable, given the anticipated scope and quality of the services to be rendered by the Adviser.

In approving the Sub-Advisory Agreement with respect to the Fund, the Trustees considered a wide range of information about, among other things: the Sub-Adviser and its personnel with responsibilities for providing services to the Fund; the terms of the Sub-Advisory Agreement; the scope and quality of services to be provided to the Fund under the Sub-Advisory Agreement; and the fees payable to the

Sub-Adviser by the Adviser. The Trustees were informed that the sub-advisory fee was negotiated at arm's length. The Trustees were also informed that the Sub-Adviser may receive research services from brokers in connection with portfolio securities transactions for the Fund and that research services furnished by brokers through which the Fund effects securities transactions may be used by the Sub-Adviser in advising other accounts that it advises. Conversely, research services furnished to the Sub-Adviser in connection with other accounts the Sub-Adviser advises may be used by the Sub-Adviser in advising the Fund.

Based on the foregoing, the Trustees concluded that the investment processes, research capabilities and philosophies of the Sub-Adviser would be well suited to the Fund, given its investment objectives and policies.

Following their review, the Trustees determined that the terms of the Advisory Agreement and Sub-Advisory Agreement were fair and reasonable with respect to the Fund and were in the best interests of the Fund's shareholders. After carefully considering the information summarized above, the Trustees, including the Independent Trustees voting separately, unanimously voted to approve the Advisory Agreement and the Sub-Advisory Agreement.

Prior to the votes being taken to approve the Advisory Agreement and Sub-Advisory Agreement, the Independent Trustees met separately in executive session to discuss the appropriateness of such contracts. In their deliberations with respect to these matters, the Independent Trustees were advised by their independent legal counsel. The Independent Trustees weighed the foregoing matters in light of the advice given to them by their independent legal counsel as to the law applicable to the review of investment advisory contracts. In arriving at a decision, the Trustees, including the Independent Trustees, did not identify any single matter as all-important or controlling. The foregoing summary does not detail all of the matters considered.

12. Submission of
Matters to a Vote
of Security
Holders
(Unaudited)

Pursuant to a written consent, dated July 10, 2006, MassMutual, in its capacity as the majority shareholder of the Trust, elected the Trustees of the Trust, as described in the Information Statement dated June 19, 2006.

Report of Independent Registered Public Accounting Firm

To the Board of Trustees and Shareholders of MassMutual Select Funds:

We have audited the accompanying statements of assets and liabilities, including the portfolios of investments, of the MassMutual Select Funds (the "Trust"), comprised of MassMutual Select Strategic Bond Fund, MassMutual Select Strategic Balanced Fund, MassMutual Select Diversified Value Fund, MassMutual Select Fundamental Value Fund, MassMutual Select Value Equity Fund, MassMutual Select Large Cap Value Fund, MassMutual Select Indexed Equity Fund, MassMutual Select Core Opportunities Fund, MassMutual Select Blue Chip Growth Fund, MassMutual Select Large Cap Growth Fund, MassMutual Select Growth Equity Fund, MassMutual Select Aggressive Growth Fund, MassMutual Select OTC 100 Fund, MassMutual Select Focused Value Fund, MassMutual Select Mid-Cap Value Fund, MassMutual Select Small Cap Value Equity Fund, MassMutual Select Small Company Value Fund, MassMutual Select Small Cap Core Equity Fund, MassMutual Select Mid Cap Growth Equity Fund, MassMutual Select Mid Cap Growth Equity II Fund, MassMutual Select Small Cap Growth Equity Fund, MassMutual Select Small Company Growth Fund, MassMutual Select Emerging Growth Fund, MassMutual Select Diversified International Fund, MassMutual Select Overseas Fund, MassMutual Select Destination Retirement Income Fund, MassMutual Select Destination Retirement 2010 Fund, MassMutual Select Destination Retirement 2020 Fund, MassMutual Select Destination Retirement 2030 Fund, and MassMutual Select Destination Retirement 2040 Fund, (the "Funds") as of December 31, 2006, and the related statements of operations for the year then ended, the statements of changes in net assets for each of the two years in the period then ended, and the financial highlights for each of the five years in the period then ended. These financial statements and financial highlights are the responsibility of the Trust's management. Our responsibility is to express an opinion on these financial statements and financial highlights based on our audits.

We conducted our audits in accordance with the standards of the Public Company Accounting Oversight Board (United States). Those standards require that we plan and perform the audit to obtain reasonable assurance about whether the financial statements and financial highlights are free of material misstatement. The Trust is not required to have, nor were we engaged to perform, an audit of its internal control over financial reporting. Our audits include consideration of internal control over financial reporting as a basis for designing audit procedures that are appropriate in the circumstances, but not for the purpose of expressing an opinion of the effectiveness of the Trust's internal control over financial reporting. Accordingly, we express no such opinion. An audit also includes examining, on a test basis, evidence supporting the amounts and disclosures in the financial statements, assessing the accounting principles used and significant estimates made by management, as well as evaluating the overall financial statement presentation. Our procedures include confirmation of securities owned as of December 31, 2006, by correspondence with the custodian and brokers; where replies were not received from brokers, we performed other auditing procedures. We believe that our audits provide a reasonable basis for our opinion.

In our opinion, the financial statements and financial highlights referred to above present fairly, in all material respects, the financial position of each of the Funds constituting the Trust as of December 31, 2006, and the results of their operations for the year ended, the changes in their net assets for each of the two years in the period ended and the financial highlights for each of the five years in the period ended, in conformity with accounting principles generally accepted in the United States of America.

Deloitte & Touche LLP

Delotte - Tourse LLP

Boston, Massachusetts February 28, 2007

Trustees and Officers (Unaudited)

The following table lists the Trust's trustees and officers as of December 31, 2006; their address and age; their position with the Trust; the length of time holding that position with the Trust; their principal occupation(s) during the past five years; the number of portfolios in the fund complex they oversee; and other directorships they hold in companies subject to registration or reporting requirements of the Securities Exchange Act of 1934 (generally called "public companies") or in registered investment companies. The Trust's Statement of Additional Information includes additional information about the Trust's trustees and is available, without charge, upon request by calling 1-888-309-3539 or by writing MassMutual Select Funds, c/o Massachusetts Mutual Life Insurance Company, 1295 State Street, Springfield, Massachusetts 01111-0111, Attention: Retirement Services Marketing.

Disinterested Trustees

Other Information (Unaudited)

Fund Expenses December 31, 2006

Expense Examples The following information is in regards to expenses for the six months ended December 31, 2006:

As a shareholder of the Funds, you may incur two types of costs: (1) transaction costs, including sales charges (loads) on purchase payments or redemptions; and (2) ongoing costs, including management fees, distribution and/or service (12b-1) fees; and other Fund expenses. These examples are intended to help you understand your ongoing costs (in dollars) of investing in the Funds and to compare these costs with the ongoing costs of investing in other mutual funds.

These examples are based on an investment of \$1,000 invested for the six months ended December 31, 2006.

Actual Expenses

The first line of each table on the following pages provides information about actual account values and actual expenses. You may use the information in this line, together with the amount you invested, to estimate the expenses that you paid over the period. Simply divide your account value by \$1,000 (for example, an \$8,600 account value divided by \$1,000 = 8.6), then multiply the result by the number in the first line under the heading entitled "Operating Expenses Incurred" to estimate the expenses you paid on your account during this period.

Hypothetical Example for Comparison **Purposes**

The second line of each table on the following pages provides information about hypothetical account values and hypothetical expenses based on the Fund's actual expense ratio and an assumed rate of return of 5% per year before expenses, which is not the Fund's actual return. The hypothetical account values and expenses may not be used to estimate the actual ending account balance or expenses you paid for the period. You may use this information to compare the ongoing costs of investing in the Fund and other funds. To do so, compare this 5% hypothetical example with the 5% hypothetical examples that appear in the shareholder reports of the other funds.

Please note that the expenses shown in the tables are meant to highlight your ongoing costs only and do not reflect any transactional costs, such as sales charges (loads). Therefore, the second line of the table is useful in comparing ongoing costs only, and will not help you determine the relative total costs of owning different funds. In addition, if these transactional costs were included, your costs would have been higher.

The Funds incur ongoing operating expenses during the normal course of business, such as management fees, shareholder service fees and other expenses. The following tables, assuming a \$1,000 investment in a class of shares, disclose the ending account value and operating expenses incurred for the six months ended December 31, 2006, based on, (1) the classes' actual return and actual expenses, and (2) a hypothetical annualized 5% return and the classes' actual expenses:

Strategic Bond Fund

Class A

	Beginning Value	Ending Value	Operating Expense Incurred*
1) Actual	\$1,000.00	\$1,055.70	\$4.97
2) Hypothetical	1,000.00	1,020.37	4.89

^{*} Expenses are calculated using the annualized expense ratio for the six months ended December 31, 2006 of 0.96%, multiplied by the average account value over the period, multiplied by the number of days in the period, divided by the number of days in the year.

Class L

	Beginning Value	Ending Value	Operating Expense Incurred*
1) Actual	\$1,000.00	\$1,056.90	\$3.68
2) Hypothetical	1,000.00	1,021.63	3.62

^{*} Expenses are calculated using the annualized expense ratio for the six months ended December 31, 2006 of 0.71%, multiplied by the average account value over the period, multiplied by the number of days in the period, divided by the number of days in the year.

Class Y

	Beginning Value	Ending Value	Operating Expense Incurred*
1) Actual	\$1,000.00	\$1,057.50	\$3.63
2) Hypothetical	1,000.00	1,021.68	3.57

^{*} Expenses are calculated using the annualized expense ratio for the six months ended December 31, 2006 of 0.70%, multiplied by the average account value over the period, multiplied by the number of days in the period, divided by the number of days in the year.

	Beginning Value	Ending Value	Operating Expense Incurred*
1) Actual	\$1,000.00	\$1,058.00	\$3.37
2) Hypothetical	1,000.00	1,021.93	3.31

^{*} Expenses are calculated using the annualized expense ratio for the six months ended December 31, 2006 of 0.65%, multiplied by the average account value over the period, multiplied by the number of days in the period, divided by the number of days in the year.

Class N

	Beginning Value	Ending Value	Operating Expense Incurred*
1) Actual	\$1,000.00	\$1,055.30	\$6.48
2) Hypothetical	1,000.00	1,018.90	6.36

^{*} Expenses are calculated using the annualized expense ratio for the six months ended December 31, 2006 of 1.25%, multiplied by the average account value over the period, multiplied by the number of days in the period, divided by the number of days in the year.

Strategic Balanced Fund

Class A

	Beginning Value	Ending Value	Operating Expense Incurred*
1) Actual	\$1,000.00	\$1,095.70	\$6.39
2) Hypothetical	1,000.00	1,019.11	6.16

^{*} Expenses are calculated using the annualized expense ratio for the six months ended December 31, 2006 of 1.21%, multiplied by the average account value over the period, multiplied by the number of days in the period, divided by the number of days in the year.

Class L

	Beginning Value	Ending Value	Operating Expense Incurred*
1) Actual	\$1,000.00	\$1,097.60	\$5.08
2) Hypothetical	1,000.00	1,020.37	4.89

^{*} Expenses are calculated using the annualized expense ratio for the six months ended December 31, 2006 of 0.96%, multiplied by the average account value over the period, multiplied by the number of days in the period, divided by the number of days in the year.

Class Y

	Beginning Value	Ending Value	Operating Expense Incurred*
1) Actual	\$1,000.00	\$1,098.20	\$4.28
2) Hypothetical	1,000.00	1,021.12	4.13

^{*} Expenses are calculated using the annualized expense ratio for the six months ended December 31, 2006 of 0.81%, multiplied by the average account value over the period, multiplied by the number of days in the period, divided by the number of days in the year.

	Beginning Value	Ending Value	Operating Expense Incurred*
1) Actual	\$1,000.00	\$1,098.00	\$4.02
2) Hypothetical	1,000.00	1,021.37	3.87

^{*} Expenses are calculated using the annualized expense ratio for the six months ended December 31, 2006 of 0.76%, multiplied by the average account value over the period, multiplied by the number of days in the period, divided by the number of days in the year.

Class N

	Beginning Value	Ending Value	Operating Expense Incurred*
1) Actual	\$1,000.00	\$1,094.40	\$7.97
2) Hypothetical	1,000.00	1,017.59	7.68

^{*} Expenses are calculated using the annualized expense ratio for the six months ended December 31, 2006 of 1.51%, multiplied by the average account value over the period, multiplied by the number of days in the period, divided by the number of days in the year.

Diversified Value Fund

Class A

	Beginning Value	Ending Value	Operating Expense Incurred*
1) Actual	\$1,000.00	\$1,149.70	\$5.85
2) Hypothetical	1,000.00	1,019.76	5.50

^{*} Expenses are calculated using the annualized expense ratio for the six months ended December 31, 2006 of 1.08%, multiplied by the average account value over the period, multiplied by the number of days in the period, divided by the number of days in the year.

Class L

	Beginning Value	Ending Value	Operating Expense Incurred*
1) Actual	\$1,000.00	\$1,151.80	\$4.28
2) Hypothetical	1,000.00	1,021.22	4.02

^{*} Expenses are calculated using the annualized expense ratio for the six months ended December 31, 2006 of 0.79%, multiplied by the average account value over the period, multiplied by the number of days in the period, divided by the number of days in the year.

Class Y

	Beginning Value	Ending Value	Operating Expense Incurred*
1) Actual	\$1,000.00	\$1,151.80	\$3.69
2) Hypothetical	1,000.00	1,021.78	3.47

^{*} Expenses are calculated using the annualized expense ratio for the six months ended December 31, 2006 of 0.68%, multiplied by the average account value over the period, multiplied by the number of days in the period, divided by the number of days in the year.

	Beginning Value	Ending Value	Operating Expense Incurred*
1) Actual	\$1,000.00	\$1,152.40	\$3.15
2) Hypothetical	1,000.00	1,022.28	2.96

^{*} Expenses are calculated using the annualized expense ratio for the six months ended December 31, 2006 of 0.58%, multiplied by the average account value over the period, multiplied by the number of days in the period, divided by the number of days in the year.

Class N

	Beginning Value	Ending Value	Operating Expense Incurred*
1) Actual	\$1,000.00	\$1,148.00	\$7.53
2) Hypothetical	1,000.00	1,018.20	7.07

^{*} Expenses are calculated using the annualized expense ratio for the six months ended December 31, 2006 of 1.39%, multiplied by the average account value over the period, multiplied by the number of days in the period, divided by the number of days in the year.

Fundamental Value Fund

Class A

	Beginning Value	Ending Value	Operating Expense Incurred*
1) Actual	\$1,000.00	\$1,127.40	\$6.60
2) Hypothetical	1,000.00	1,019.00	6.26

^{*} Expenses are calculated using the annualized expense ratio for the six months ended December 31, 2006 of 1.23%, multiplied by the average account value over the period, multiplied by the number of days in the period, divided by the number of days in the year.

Class L

	Beginning Value	Ending Value	Operating Expense Incurred*
1) Actual	\$1,000.00	\$1,128.20	\$5.26
2) Hypothetical	1,000.00	1,020.27	4.99

^{*} Expenses are calculated using the annualized expense ratio for the six months ended December 31, 2006 of 0.98%, multiplied by the average account value over the period, multiplied by the number of days in the period, divided by the number of days in the year.

Class Y

	Beginning Value	Ending Value	Operating Expense Incurred*
1) Actual	\$1,000.00	\$1,129.80	\$4.46
2) Hypothetical	1,000.00	1,021.02	4.23

^{*} Expenses are calculated using the annualized expense ratio for the six months ended December 31, 2006 of 0.83%, multiplied by the average account value over the period, multiplied by the number of days in the period, divided by the number of days in the year.

	Beginning Value	Ending Value	Operating Expense Incurred*
1) Actual	\$1,000.00	\$1,129.90	\$4.24
2) Hypothetical	1,000.00	1,021.22	4.02

^{*} Expenses are calculated using the annualized expense ratio for the six months ended December 31, 2006 of 0.79%, multiplied by the average account value over the period, multiplied by the number of days in the period, divided by the number of days in the year.

Class N

	Beginning Value	Ending Value	Operating Expense Incurred*
1) Actual	\$1,000.00	\$1,125.60	\$8.20
2) Hypothetical	1,000.00	1,017.49	7.78

^{*} Expenses are calculated using the annualized expense ratio for the six months ended December 31, 2006 of 1.53%, multiplied by the average account value over the period, multiplied by the number of days in the period, divided by the number of days in the year.

Value Equity Fund

Class A

	Beginning Value	Ending Value	Operating Expense Incurred*
1) Actual	\$1,000.00	\$1,093.90	\$6.86
2) Hypothetical	1,000.00	1,018.65	6.61

^{*} Expenses are calculated using the annualized expense ratio for the six months ended December 31, 2006 of 1.30%, multiplied by the average account value over the period, multiplied by the number of days in the period, divided by the number of days in the year.

Class L

	Beginning Value	Ending Value	Operating Expense Incurred*
1) Actual	\$1,000.00	\$1,095.20	\$5.55
2) Hypothetical	1,000.00	1,019.91	5.35

^{*} Expenses are calculated using the annualized expense ratio for the six months ended December 31, 2006 of 1.05%, multiplied by the average account value over the period, multiplied by the number of days in the period, divided by the number of days in the year.

Class Y

	Beginning Value	Ending Value	Operating Expense Incurred*
1) Actual	\$1,000.00	\$1,095.90	\$4.75
2) Hypothetical	1,000.00	1,020.67	4.58

^{*} Expenses are calculated using the annualized expense ratio for the six months ended December 31, 2006 of 0.90%, multiplied by the average account value over the period, multiplied by the number of days in the period, divided by the number of days in the year.

	Beginning Value	Ending Value	Operating Expense Incurred*
1) Actual	\$1,000.00	\$1,097.60	\$4.49
2) Hypothetical	1,000.00	1,020.92	4.33

^{*} Expenses are calculated using the annualized expense ratio for the six months ended December 31, 2006 of 0.85%,, multiplied by the average account value over the period, multiplied by the number of days in the period, divided by the number of days in the year.

Class N

	Beginning Value	Ending Value	Operating Expense Incurred*
1) Actual	\$1,000.00	\$1,092.60	\$8.44
2) Hypothetical	1,000.00	1,017.14	8.13

^{*} Expenses are calculated using the annualized expense ratio for the six months ended December 31, 2006 of 1.60%, multiplied by the average account value over the period, multiplied by the number of days in the period, divided by the number of days in the year.

Large Cap Value Fund

Class A

	Beginning Value	Ending Value	Operating Expense Incurred*

^{*} Expenses are calculated using the annualized expense ratio for the six months ended December 31, 2006 of 0.76%, multiplied by the average account value over the period, multiplied by the number of days in the period, divided by the number of days in the year.

Class N

	Beginning Value	Ending Value	Operating Expense Incurred*
1) Actual	\$1,000.00	\$1,107.90	\$8.24
2) Hypothetical	1,000.00	1,017.39	7.88

^{*} Expenses are calculated using the annualized expense ratio for the six months ended December 31, 2006 of 1.55%, multiplied by the average account value over the period, multiplied by the number of days in the period, divided by the number of days in the year.

Indexed Equity Fund

Class A

	Beginning Value	Ending Value	Operating Expense Incurred*
1) Actual	\$1,000.00	\$1,123.10	\$3.48
2) Hypothetical	1,000.00	1,021.93	3.31

^{*} Expenses are calculated using the annualized expense ratio for the six months ended December 31, 2006 of 0.65%, multiplied by the average account value over the period, multiplied by the number of days in the period, divided by the number of days in the year.

Class L

	Beginning Value	Ending Value	Operating Expense Incurred*
1) Actual	\$1,000.00	\$1,124.40	\$2.14
2) Hypothetical	1,000.00	1,023.19	2.04

^{*} Expenses are calculated using the annualized expense ratio for the six months ended December 31, 2006 of 0.40%, multiplied by the average account value over the period, multiplied by the number of days in the period, divided by the number of days in the year.

Class Y

	Beginning Value	Ending Value	Operating Expense Incurred*
1) Actual	\$1,000.00	\$1,125.30	\$2.41
2) Hypothetical	1,000.00	1,022.94	2.29

^{*} Expenses are calculated using the annualized expense ratio for the six months ended December 31, 2006 of 0.45%, multiplied by the average account value over the period, multiplied by the number of days in the period, divided by the number of days in the year.

	Beginning Value	Ending Value	Operating Expense Incurred*
1) Actual	\$1,000.00	\$1,125.40	\$2.25
2) Hypothetical	1,000.00	1,023.09	2.14

^{*} Expenses are calculated using the annualized expense ratio for the six months ended December 31, 2006 of 0.42%, multiplied by the average account value over the period, multiplied by the number of days in the period, divided by the number of days in the year.

Class Z

	Beginning Value	Ending Value	Operating Expense Incurred*
1) Actual	\$1,000.00	\$1,125.90	\$1.07
2) Hypothetical	1,000.00	1,024.20	1.02

^{*} Expenses are calculated using the annualized expense ratio for the six months ended December 31, 2006 of 0.20%, multiplied by the average account value over the period, multiplied by the number of days in the period, divided by the number of days in the year.

Class N

	Beginning Value	Ending Value	Operating Expense Incurred*
1) Actual	\$1,000.00	\$1,122.00	\$5.08
2) Hypothetical	1,000.00	1,020.42	4.84

^{*} Expenses are calculated using the annualized expense ratio for the six months ended December 31, 2006 of 0.95%, multiplied by the average account value over the period, multiplied by the number of days in the period, divided by the number of days in the year.

Core Opportunities Fund

Class A

	Beginning Value	Ending Value	Operating Expense Incurred*
1) Actual	\$1,000.00	\$1,117.90	\$7.21
2) Hypothetical	1,000.00	1,018.40	6.87

^{*} Expenses are calculated using the annualized expense ratio for the six months ended December 31, 2006 of 1.35%, multiplied by the average account value over the period, multiplied by the number of days in the period, divided by the number of days in the year.

Class L

	Beginning Value	Ending Value	Operating Expense Incurred*
1) Actual	\$1,000.00	\$1,119.00	\$5.88
2) Hypothetical	1,000.00	1,019.66	5.60

^{*} Expenses are calculated using the annualized expense ratio for the six months ended December 31, 2006 of 1.10%, multiplied by the average account value over the period, multiplied by the number of days in the period, divided by the number of days in the year.

	Beginning Value	Ending Value	Operating Expense Incurred*
1) Actual	\$1,000.00	\$1,120.40	\$5.08
2) Hypothetical	1,000.00	1,020.42	4.84

^{*} Expenses are calculated using the annualized expense ratio for the six months ended December 31, 2006 of 0.95%, multiplied by the average account value over the period, multiplied by the number of days in the period, divided by the number of days in the year.

Class S

	Beginning Value	Ending Value	Operating Expense Incurred*
1) Actual	\$1,000.00	\$1,120.40	\$4.81
2) Hypothetical	1,000.00	1,020.67	4.58

^{*} Expenses are calculated using the annualized expense ratio for the six months ended December 31, 2006 of 0.90%, multiplied by the average account value over the period, multiplied by the number of days in the period, divided by the number of days in the year.

Class N

	Beginning Value	Ending Value	Operating Expense Incurred*
1) Actual	\$1,000.00	\$1,115.70	\$8.80
2) Hypothetical	1,000.00	1,016.89	8.39

^{*} Expenses are calculated using the annualized expense ratio for the six months ended December 31, 2006 of 1.65%, multiplied by the average account value over the period, multiplied by the number of days in the period, divided by the number of days in the year.

Blue Chip Growth Fund

Class A

	Beginning Value	Ending Value	Operating Expense Incurred*
1) Actual	\$1,000.00	\$1,105.40	\$6.85
2) Hypothetical	1,000.00	1,018.70	6.56

^{*} Expenses are calculated using the annualized expense ratio for the six months ended December 31, 2006 of 1.29%, multiplied by the average account value over the period, multiplied by the number of days in the period, divided by the number of days in the year.

Class L

	Beginning Value	Ending Value	Operating Expense Incurred*
1) Actual	\$1,000.00	\$1,107.10	\$5.52
2) Hypothetical	1,000.00	1,019.96	5.30

^{*} Expenses are calculated using the annualized expense ratio for the six months ended December 31, 2006 of 1.04%, multiplied by the average account value over the period, multiplied by the number of days in the period, divided by the number of days in the year.

	Beginning Value	Ending Value	Operating Expense Incurred*
1) Actual	\$1,000.00	\$1,107.00	\$4.89
2) Hypothetical	1,000.00	1,020.57	4.69

^{*} Expenses are calculated using the annualized expense ratio for the six months ended December 31, 2006 of 0.92%, multiplied by the average account value over the period, multiplied by the number of days in the period, divided by the number of days in the year.

Class S

	Beginning Value	Ending Value	Operating Expense Incurred*
1) Actual	\$1,000.00	\$1,108.00	\$4.20
2) Hypothetical	1,000.00	1,021.22	4.02

^{*} Expenses are calculated using the annualized expense ratio for the six months ended December 31, 2006 of 0.79%, multiplied by the average account value over the period, multiplied by the number of days in the period, divided by the number of days in the year.

Class N

	Beginning Value	Ending Value	Operating Expense Incurred*
1) Actual	\$1,000.00	\$1,104.40	\$8.43
2) Hypothetical	1,000.00	1,017.19	8.08

^{*} Expenses are calculated using the annualized expense ratio for the six months ended December 31, 2006 of 1.59%, multiplied by the average account value over the period, multiplied by the number of days in the period, divided by the number of days in the year.

Large Cap Growth Fund

Class A

	Beginning Value	Ending Value	Operating Expense Incurred*

1) Actual	\$1,000.00	\$1,060.70	\$0.78
2) Hypothetical	1,000.00	1,024.45	0.77

^{*} Expenses are calculated using the annualized expense ratio for the six months ended December 31, 2006 of 0.15%, multiplied by the average account value over the period, multiplied by the number of days in the period, divided by the number of days in the year.

Class S

	Beginning Value	Ending Value	Operating Expense Incurred*
1) Actual	\$1,000.00	\$1,061.00	\$0.52
2) Hypothetical	1,000.00	1,024.70	0.51

^{*} Expenses are calculated using the annualized expense ratio for the six months ended December 31, 2006 of 0.10%, multiplied by the average account value over the period, multiplied by the number of days in the period, divided by the number of days in the year.

	Beginning Value	Ending Value	Operating Expense Incurred*
1) Actual	\$1,000.00	\$1,057.40	\$4.15
2) Hypothetical	1,000.00	1,021.17	4.08

^{*} Expenses are calculated using the annualized expense ratio for the six months ended December 31, 2006 of 0.80%, multiplied by the average account value over the period, multiplied by the number of days in the period, divided by the number of days in the year.

Destination Retirement 2020 Fund

Class A

	Beginning Value	Ending Value	Operating Expense Incurred*
1) Actual	\$1,000.00	\$1,072.30	\$2.61
2) Hypothetical	1,000.00	1,022.68	2.55

^{*} Expenses are calculated using the annualized expense ratio for the six months ended December 31, 2006 of 0.50%, multiplied by the average account value over the period, multiplied by the number of days in the period, divided by the number of days in the year.

Class L

	Beginning Value	Ending Value	Operating Expense Incurred*
1) Actual	\$1,000.00	\$1,072.80	\$1.31
2) Hypothetical	1,000.00	1,023.95	1.28

^{*} Expenses are calculated using the annualized expense ratio for the six months ended December 31, 2006 of 0.25%, multiplied by the average account value over the period, multiplied by the number of days in the period, divided by the number of days in the year.

Class Y

	Beginning Value	Ending Value	Operating Expense Incurred*
1) Actual	\$1,000.00	\$1,074.00	\$0.78
2) Hypothetical	1,000.00	1,024.45	0.77

^{*} Expenses are calculated using the annualized expense ratio for the six months ended December 31, 2006 of 0.15%, multiplied by the average account value over the period, multiplied by the number of days in the period, divided by the number of days in the year.

Class S

	Beginning Value	Ending Value	Operating Expense Incurred*
1) Actual	\$1,000.00	\$1,074.30	\$0.52
2) Hypothetical	1,000.00	1,024.70	0.51

^{*} Expenses are calculated using the annualized expense ratio for the six months ended December 31, 2006 of 0.10%, multiplied by the average account value over the period, multiplied by the number of days in the period, divided by the number of days in the year.

	Beginning Value	Ending Value	Operating Expense Incurred*
1) Actual	\$1,000.00	\$1,070.10	\$4.17
2) Hypothetical	1,000.00	1,021.17	4.08

^{*} Expenses are calculated using the annualized expense ratio for the six months ended December 31, 2006 of 0.80%, multiplied by the average account value over the period, multiplied by the number of days in the period, divided by the number of days in the year.
